Modern and Global Ayurveda Dagmar Wujastyk, Frederick

M. Smith, 2013-09-09 Modern and Global Ayurveda provides an overview of the relatively recent history of Ayurveda in its modern and globalized forms. One of the traditional medical systems originating on the Indian subcontinent, Ayurveda is fast becoming a transnational phenomenon. Contributors to this volume include both scholars and practitioners of Ayurveda. The wide range of perspectives they offer includes the philosophical, anthropological, sociopolitical, economic, biomedical, and pharmacological. Issues such as the ideological clashes between classical and modernized Ayurveda, the export of Ayurvedic medical lore to Western countries, and the possible reimport of its adapted and reinterpreted contents are covered and prove particularly relevant to contemporary discussion on the integration of complementary and alternative health care.

Meanings of Pain Simon van Rysewyk, 2017-02-07 Although pain is widely recognized by clinicians and researchers as an experience, pain is always felt in a patient-specific way rather than experienced for what it objectively is, making perceived meaning important in the study of pain. The book contributors explain why meaning is important in the way that pain is felt and promote the integration of quantitative and qualitative methods to study meanings of pain. For the first time in a book, the study of the meanings of pain is given the attention it deserves. All pain research and medicine inevitably have to negotiate how pain is perceived, how meanings of pain can be described within the fabric of a person's life and neurophysiology, what factors mediate them, how they interact and change over time, and how the relationship between patient, researcher, and clinician might be understood in terms of meaning. Though meanings of pain are not intensively studied in contemporary pain research or thoroughly described as part of clinical assessment, no pain researcher or clinician can avoid asking questions about how pain is perceived or the types of data and scientific methods relevant in discovering the answers.
