

Principles Of Development And Differentiation Current Concepts In Biology Series

Milton H. Saier, Gary R. Jacobson

Principles Of Development And Differentiation Current Concepts In Biology Series:

The Molecular Basis of Sex and Differentiation Milton H. Saier, Gary R. Jacobson, 2012-12-06 Man's mind stretched to a new idea never goes back to its original dimensions Oliver Wendell Holmes Our current understanding of sex and biological differentiation results from the application of three principal experimental approaches to these subjects those of the physiologist the biochemist and the geneticist These three approaches are illustrated by the materials presented in the chapters of this volume Chapters 1-5 emphasize conceptualization of developmental processes describing systems principally from the standpoint of the physiologist Structures and functions are defined with only occasional reference to specific molecular details Chapters 6-10 present the views of the biochemist attempting to describe functions influencing or regulating cellular behavior at the molecular level And Chapters 11-14 illustrate the approaches of the modern day geneticist in his attempts to gain a detailed understanding of processes controlling gene expression While it is possible to delineate these three major sections each emphasizing a distinct experimental approach it must be realized that the yield of knowledge increases exponentially with the number of experimental approaches available to the investigator Information resulting from the application of each of these approaches must converge to give the same answers for any one biological phenomenon in any one experimental system Further if we can learn of details regarding a particular process by applying different experimental approaches our postulates concerning the underlying molecular mechanisms are likely to be more accurate But biological systems are not unrelated Current Catalog National Library of Medicine (U.S.), 1979 First multi year cumulation covers six years 1965-70 **International Review of General and Experimental Zoology** William J. L. Felts, Richard J. Harrison, 2013-10-22 International Review of General and Experimental Zoology Volume 3 reviews various topics related to general and experimental zoology including the epigenetic mechanisms of patterns in the insect integument and the enteric plexus of mammals The role of macrophages in the induction of the immune response and the metabolism of mammalian ova are also explored together with the structure of gallbladder epithelium and cell types in the mammalian thyroid gland Comprised of eight chapters this volume first discusses the problem of supracellular pattern formation in the insect cuticle and its complexity and unknown nature with emphasis on the cuticular patterns of the various zones of the cockroach antenna The reader is then introduced to the enteric plexus of mammals and its components along with the relationship of the innervation of the gut to the autonomic nervous system Subsequent chapters focus on the role of macrophages in the induction of the immune response metabolism of mammalian ova structure of gallbladder epithelium and the goblet cells Paneth cells and basal granular cells of the epithelium of the intestine The book also considers cell types found in the mammalian thyroid gland before concluding with an assessment of the use of electron microscopy in elucidating the structure and function of the placenta This monograph should prove useful to practicing zoologists and graduate and undergraduate students of zoology National Library of Medicine Current Catalog National Library of Medicine
