Geospatial Information Technology for Emergency Response Sisi Zlatanova, Jonathan Li, 2008-01-24 Disaster management is generally understood to consist of four phases mitigation preparedness response and recovery While these phases are all important and interrelated response and recovery are often considered to be the most critical in terms of saving lives Response is the acute phase occurring after the event and includes all arrangements

Geo-information for Disaster Management Peter van Oosterom, Siyka Zlatanova, Elfriede Fendel, 2006-02-28 Geo information technology offers an opportunity to support disaster management industrial accidents road collisions complex emergencies earthquakes fires floods and similar catastrophes for example the recent huge disaster with the Tsunami in South East Asia on 26 December 2004 Access to needed information facilitation of the interoperability of

emergency services and provision of high quality care to the public are a number of the key requirements. Such requirements pose significant challenges for data management, discovery, translation, integration, visualization, and communication based on the semantics of the heterogeneous geo information sources with differences in many aspects: scale, resolution, dimension, 2D or 3D classification, and attribute schemes, temporal aspects, up to date ness, history, predictions of the future, spatial reference system used etc. The book provides a broad overview of the geo information technology software systems needed, used, and to be developed for disaster management. The book provokes a wide discussion on systems and requirements for use of geo information under time and stress constraints and unfamiliar situations, environments, and circumstances. *Software*

Architecture for Big Data and the Cloud Ivan Mistrik, Rami Bahsoon, Nour Ali, Maritta Heisel, Bruce Maxim, 2017-06-12

Software Architecture for Big Data and the Cloud is designed to be a single resource that brings together research on how software architectures can solve the challenges imposed by building big data software systems. The challenges of big data on the software architecture can relate to scale, security, integrity, performance, concurrency, parallelism, and dependability amongst others. Big data handling requires rethinking architectural solutions to meet functional and non functional requirements related to volume, variety, and velocity. The book's editors have varied and complementary backgrounds in requirements and architecture, specifically in software architectures for cloud and big data, as well as expertise in software engineering for cloud and big data. This book brings together work across different disciplines in software engineering, including work expanded from conference tracks and workshops led by the editors. Discusses systematic and disciplined approaches to building software architectures for cloud and big data with state of the art methods and techniques. Presents case studies involving enterprise business and government service deployment of big data applications. Shares guidance on theory, frameworks, methodologies, and architecture for cloud and big data. **XML-Based Data Management and**

Multimedia Engineering - EDBT 2002 Workshops Akmal B. Chaudhri, Chabane Djeraba, Rainer Unland, Wolfgang Lindner, 2002-11-19. This volume comprises papers from the following three workshops that were part of the complete program for the International Conference on Extending Database Technology EDBT held in Prague, Czech Republic in March 2002: XML Based Data Management XMLDM, Second International Workshop on Multimedia Data and Document Engineering MDDE, Young Researchers Workshop YRWS. Together the three workshops featured 48 high quality papers selected from approximately 130 submissions. It was therefore difficult to decide on the papers that were to be accepted for presentation. We believe that the accepted papers substantially contribute to their particular fields of research. The workshops were an excellent basis for intense and highly fruitful discussions. The quality and quantity of papers show that the areas of interest for the workshops are highly active. A large number of excellent researchers are working in relevant fields producing research output that is not only of interest to other researchers but also for industry. The organizers and participants of the workshops were highly satisfied with the output. The high quality of the presenters and workshop participants contributed to

the success of each workshop The amazing environment of Prague and the location of the EDBT conference also contributed to the overall success Last but not least our sincere thanks to the conference organizers the organizing team was always willing to help and if there were things that did not work assistance was quickly available
