Designing an Internet David D. Clark,2018-10-30 Why the Internet was designed to be the way it is and how it could be different now and in the future How do you design an internet The architecture of the current Internet is the product of basic design decisions made early in its history What would an internet look like if it were designed today from the ground up In this book MIT computer scientist David Clark explains how the Internet is actually put together what requirements it was designed to meet and why different design decisions would create different internets He does not take today s Internet as a given but tries to learn from it and from alternative proposals for what an internet might be in order to draw some general conclusions about network architecture Clark discusses the history of the Internet and how a range of potentially conflicting requirements including longevity security availability economic viability management and meeting the needs of society shaped its character He addresses both the technical aspects of the Internet and its broader social and economic contexts He describes basic design approaches and explains in terms accessible to nonspecialists how networks are designed to carry out their functions An appendix offers a more technical discussion of network functions for readers who want the details He considers a range of alternative proposals for how to design an internet examines in detail the key requirements a successful design must meet and then imagines how to design a future internet from scratch It s not that we should expect anyone to do this but perhaps by conceiving a better future we can push toward it

National Research Council, Computer Science and Telecommunications Board, 1997-10-09 Telecoms in the Internet Age

Martin Fransman, 2002 The telecoms industry is one of the most important in the global economy Without it the Internet and Information Society would not exist But how does it work How has it been changed by the Internet Why was 2 500 billion wiped off its stock market value in 2000 1 How have its incumbent operators such as AT&T BT Deutsche Telekom France Telecom and NTT and their aggressive rivals for example WorldCom Qwest and COLT adjusted to the radical changes sweeping the industry Why has Japan succeeded but Europe failed in creating the latest incarnation of the industry the mobile Internet These are some of the key questions analysed The book begins with an explanation of the telecoms boom and bust 1996 2002 It tackles the questions regarding who was to blame and why and also examines the consequences of the bust An analytical framework is created to understand the main forces driving the telecoms industry as it is transformed by the Internet into the infocommunications industry It is shown that knowledge in its various manifestations and changes in knowledge are responsible for the key changes that have taken place The foundation of the infocommunications industry comprises a combination of specialist technology suppliers such as Cisco Nokia NEC and Nortel and network operators Their changing relationship lies at the heart of the forces driving the industry The author looks at how these changes have affected the struggles of the incumbent network operators and their new entrant rivals He also analyses some of the main new entrepreneurs in the industry looking at why they managed to enter so successfully what has become of them and why The continuing changes in the knowledge base of the industry are examined as are some of the latest developments in the mobile Internet Finally the future of the industry is confronted The book is complemented by the interactive web site www.TelecomVisions.com
