Recent Advances in Burns and Plastic Surgery – The Chinese Experience Tisheng Chang, Jixiang Shi, Zhijun Yang, 2012-12-06 In 1958 a severely burned steel worker the extent of whose burns was 89.0% of the body surface with 20.7% of third degree burns was saved by the Kwangtsing hospital now the Rui Jin hospital of Shanghai Second Medical College. It was the first report in the world of such a critically injured patient recovering and seemed like a miracle at that time. During the 24 following years a great number of papers reporting the development and advances in burn therapy in clinics and in research showed that Chinese medical investigations in the field of burns have ranked among the most advanced in the world. Plastic surgery as an independent branch of general surgery has been established gradually since Liberation. Recently new techniques including microsurgical techniques in plastic surgery have emerged and developed permitting rapid progress in clinical work and attracting attention and appreciation in other parts of the world. The first national congress of Burns and Plastic Surgery was held from May 16-24, 1982 in Shanghai. Over 800 papers were presented and showed how advances have been made in recent years in these two specialties. Here we present selected articles as a symposium. It is hoped that this symposium will be of value to its readers. About the Editors: Chang Tisheng, Zhang Disheng who was born 12 June 1916 is Professor of Surgery, Shanghai Second Medical College, Shanghai, Chief of the Department of Plastic and Reconstructive Surgery and Director of Shanghai Ninth People's Hospital, Shanghai.
