Encyclopedia of Biomedical Gerontology ,2019-11-20 Encyclopedia of Biomedical Gerontology Three Volume Set presents a wide range of topics ranging from what happens in the body during aging the reasons and mechanisms relating to those age related changes and their clinical psychological and social modulators and determinants The book covers the biological and medical aspects of gerontology within the general framework of the biological basis of assessing age biological mechanisms of aging age related changes in biological systems human age related diseases the biomedical practicality and impracticality of interventions and finally the ethics of intervention Provides a one stop resource to information written by world leading scholars in the field of biomedical gerontology Fills a critical gap of information in a field that has seen significant progress in the last 10 years *Biochemical Studies of CNS Receptors* Leslie Iversen,2013-06-29 It is now eight years since the first Handbook volumes on Basic Neuro pharmacology were published and there have been many important advances As in many other areas in science progress in this field has depended to a considerable extent on the availability of new experimental methods and Volume 15 reviews some major recent developments including new autoradiographic techniques that allow direct visualization of drug and transmitter receptors in the nervous system and the pin pointing of the precise locations of the changes in brain metabolism elicited by various drug treatments Volume 16 and 17 cover two of the most active areas for basic research in psychopharmacology at the moment the characterization of drug and transmitter receptors in brain by radioligand binding techniques and studies of the role of small peptides in brain function The latter area in particular illustrates how rapidly progress continues to be made in basic research on the mechanisms of chemical communication within the nervous system Eight years ago when the Handbook first appeared none of the opioid peptides enkephalins and endorphins had yet been identified Since then a whole new area of basic biological research has focused on these substances and in addition we know of more than thirty other neuropeptides with putative eNS trans mitter functions

Receptors in the Developing Nervous System Ian S. Zagon,Patricia J. McLaughlin,2012-12-06 Receptors for cell hormones growth factors Fourth alterations in the development of neu and neurotransmitters are involved in the ral receptors may have profound implications control and modulation of an enormous array for the structure and function of the of biological processes The development of organism As much as possible the reper these receptors has distinct spatial and tem cussions of disrupting the orchestration of poral arrangements and alterations in this receptor development in the nervous system pattern during embryogenesis can have signi are discussed In many instances however ficant consequences for the well being of the we are just beginning to learn about some fetus infant child and adult The developing receptors and the authors may not be in a nervous system is particularly dependent on position to discuss the consequences of recep receptors because its period of structural and tor dysfunction functional organization extends through both In designing these two volumes we have prenatal and postnatal phases Moreover asked major figures in each field to review the receptors are a key element in neural com literature to apprise the audience of their munication in both the developing and adult latest findings and to provide a perspective on organism so that the ontogeny of receptors is the role of receptors in the developing nervous crucial in determining the myriad connections system These books are intended to sum forming the circuitry of the nervous system

Receptor and Ion-channel Trafficking Stephen John Moss,Jeremy Henley,2002 A volume in the Molecular and Cellular Neurobiology series This book reviews the recent advances in our understanding of the molecular and cellular mechanisms that control the assembly transport targeting and anchoring of the protein complexes making up the most important ion channels and receptor families fundamental to synaptic function Improved understanding of these processes is expected to reveal novel therapeutic targets relevant to a range of disease states The first section of the book contains three chapters dealing with cation channels and provides an accessible succinct

and comprehensive account of what is known about the structures and the assembly and targeting of these multimeric proteins The focus of the book then moves on to cover ligand gated ion channels with two chapters on acetylcholine receptors The final section of the book contains four chapters covering the excitatory and inhibitory amino acid receptors Receptor and Ion Channel Trafficking provides an integrated overview of the significant recent advances in the field of molecular neurobiology and will be essential reading for all researchers in neuroscience neurobiology biochemistry cellular and molecular biology

Neurotransmitter Receptors Sam J. Enna, 1980-12-04 Since the discovery that neuronal transmission can be chemically mediated a large number of compounds have been found in the mammalian central nervous system which appear to function as neurotransmitter agents Recently electrophysiological and biochemical methods have been developed which have enabled neuroscientists to classify better the myriad of neurotransmitter receptor sites in brain and to study their properties in finer detail As a result of these investigations a significant number of new discoveries have been made about the mechanisms involved in neurotransmitter receptor interactions the role neurotransmitters play in the actions of pharmacological agents and in the pathogenesis of various neuropsychiatric disorders The present two volume text was compiled to summarize the information relating to the physiological biochemical pharmacological and functional characteristics of neurotransmitter receptor sites While emphasis is placed on neurotransmitter receptors in the mammalian central nervous system the characteristics of these receptors in other species both vertebrate and invertebrate are also discussed where appropriate While these books cover the major classes of putative neurotransmitters amino acids peptides and biogenic amines and are therefore broad in scope each is discussed in a concise fashion to highlight the major points of historical and contemporary interest In addition to outlining data each chapter addresses current theories relating to the various aspects of receptor properties and function in an attempt to reveal the directions of future research and as a stimulus for other workers in the field
