New Topics in Vitamin E Research Oliver H. Bellock, 2007 The term vitamin E describes a family of eight antioxidants four tocopherols alpha beta gamma and delta and four tocotrienols also alpha beta gamma and delta Alpha tocopherol is the only form of vitamin E that is actively maintained in the human body and is therefore the form of vitamin E found in the largest quantities in the blood and tissue 1 Alpha tocopherol is the form of vitamin E that appears to have the greatest nutritional significance This volume presents leading edge research in this important field

Recent Advances in Psychiatry from Psycho-Neuro-Immunology Research:

Autoimmunencephalitis, Autoimmune-Encephalopathy, Mild Encephalitis Karl Bechter, David Brown, Souhel

Najjar, 2019-08-12 Growing evidence derived from cerebrospinal fluid CSF neuropathological imaging genetic and epidemiological studies link neuroinflammation and immune dysregulation to a subset of individuals with a variety of severe mental disorders SMDs including affective and non affective psychotic disorders Further the recent discoveries of neuronal

surface antibodies NSAs in autoimmune encephalitis AE presenting with diverse neuropsychiatric disorders such as psychosis and cognitive decline among many others provides further support to the notion that CNS autoimmunity and neuroinflammation can contribute to the neurobiology of psychiatric disturbances Further these immune mechanisms may contribute to a subset of patients currently diagnosed as having treatment resistant SMDs such as schizophrenia and major depressive disorder Additionally mounting data indicate that various infections can serve as an immunological trigger of aberrant immune responses presumably by causing release of excess neural antigen thereby giving rise to NSAs or aberrant immune cellular responses to give rise to primary or secondary psychiatric disorders such as schizophrenia and those associated with AE respectively Collectively these findings support the mild encephalitis hypothesis of SMD The significant overlap among AE associated psychosis systemic autoimmune disorder associated psychosis and psychotic disorders associated with pathological processes involving inflammation and immune dysregulation has also prompted some authors to adopt the term autoimmune psychosis AP This term reflects that this psychosis subtype is mechanistically linked to complex neuroimmune and inflammatory signalling abnormalities that can be responsive to early immunomodulatory treatment It also suggests that a subset of AP might represent an incomplete or forme fruste subtype of AE presenting with dominant or pure psychiatric symptoms mimicking primary psychiatric illnesses Because data indicate that delayed diagnosis and treatment may lead to permanent sequelae early recognition of AP utilizing neurodiagnostic workup e g CSF analysis neuroimaging and EEG and its early treatment with appropriate immunotherapy are paramount to a meaningful recovery This eBook will provide an overview of the current knowledge and research areas from epidemiology risk factors and diagnosis to the management of these conditions in this rapidly emerging field helping to bridge the gaps in knowledge that currently exist in the disciplines of Psychiatry Neurology and Neuroimmunology

Vascular Dysfunction and Endocrine Disorders Zhice Xu , Hong Liu, 2025-11-14 The vascular system integral to organismal homeostasis is composed of numerous organ specific subsystems that while sharing core features exhibit unique characteristics tailored to specific organ needs Central to these systems are endothelial and smooth muscle cells which bear numerous receptors for hormones and endocrine factors that regulate vascular functions These cells produce and release not only endocrine signals but also endocrine like factors that contribute to systemic homeostasis Dysfunction in the vascular or endocrine systems can lead to a cascade of disorders impacting both systems Followed up with our last volume Endothelial Dysfunction and Endocrine Diseases this new Research Topic aims to compile and synthesize recent clinical and laboratory research that sheds light on vascular cell dysfunction in the pathogenesis and progression of various endocrine disorders We seek to explore how disturbances in vascular cell function contribute to diseases such as diabetes metabolic syndrome and various hormonal imbalances and assess the efficacy of new and existing therapeutic interventions that target vascular dysfunction in the treatment of these endocrine diseases To deepen our understanding in this field we seek contributions that are focused on but not limited to the following themes

- o Etiology of vascular endothelial and or smooth muscle cell dysfunction in endocrine disorders
- o The role of vascular cells in the pathogenesis of endocrine disorders
- o Biomarkers for vascular dysfunction in endocrine systems
- o Non invasive methods for identifying vascular dysfunction in endocrine disorders
- o The impact of endocrine disorders on vascular cell health
- o Interactions between COVID 19 and vascular dysfunction in endocrine disorders
- o Therapeutic strategies to improve or reverse vascular dysfunction in the context of endocrine disorders
- o Preventative approaches against vascular dysfunction in endocrine disorders

We welcome Original Research papers and Review articles that contribute to a better understanding of these topics
