Recent Advances in Optimization Alberto Seeger, 2006-01-26 The contributions appearing in this book give an overview of recent research done in optimization and related areas such as optimal control calculus of variations and game theory They do not only address abstract issues of optimization theory but are also concerned with the modeling and computer resolution of specific optimization problems arising in industry and applied sciences

Recent Advances in Algorithmic Differentiation Shaun Forth, Paul Hovland, Eric Phipps, Jean Utke, Andrea Walther, 2012-07-30 The proceedings represent the state of knowledge in the area of algorithmic differentiation AD The 31 contributed papers presented at the AD2012 conference cover the application of AD to many areas in science and engineering as well as aspects of AD theory and its implementation in tools For all papers the referees selected from the program committee and the greater community as well as the editors have emphasized accessibility of the presented ideas also to non AD experts In the AD tools arena new implementations are introduced covering for example Java and graphical modeling environments or join the set of existing tools for Fortran New developments in AD algorithms target the efficiency of matrix operation derivatives detection and exploitation of sparsity partial separability the treatment of nonsmooth functions and other high level mathematical aspects of the numerical computations to be differentiated Applications stem from the Earth sciences nuclear engineering fluid dynamics and chemistry to name just a few In many cases the applications in a given area of science or engineering share characteristics that require specific approaches to enable AD capabilities or provide an opportunity for efficiency gains in the derivative computation The description of these characteristics and of the techniques for successfully using AD should make the proceedings a valuable source of information for users of AD tools

Research Trends in Combinatorial Optimization William J. Cook, László Lovász, Jens Vygen, 2008-11-07 The editors and authors dedicate this book to Bernhard Korte on the occasion of his seventieth birthday We the editors are happy about the overwhelming feedback to our initiative to honor him with this book and with a workshop in Bonn on November 3 7 2008

Although this would be a reason to look back we would rather like to look forward and see what are the interesting research directions today This book is written by leading experts in combinatorial optimization All papers were carefully reviewed and eventually twenty three of the invited papers were accepted for this book The breadth of topics is typical for the field combinatorial optimization builds bridges between areas like combinatorics and graph theory submodular functions and matroids network flows and connectivity approximation algorithms and mathematical programming computational geometry and polyhedral combinatorics All these topics are related and they are all addressed in this book Combinatorial optimization is also known for its numerous applications To limit the scope however this book is not primarily about applications although some are mentioned at various places Most papers in this volume are surveys that provide an excellent overview of an active research area but this book also contains many new results Highlighting many of the currently most interesting research directions in combinatorial optimization we hope that this book constitutes a good basis for future research in these areas

Recent Advances in Nonsmooth Optimization Dingzhu Du, Liqun Qi, Robert S. Womersley, 1995 Nonsmooth optimization covers the minimization or maximization of functions which do not have the differentiability properties required by classical methods The field of nonsmooth optimization is significant not only because of the existence of nondifferentiable functions arising directly in applications but also because several important methods for solving difficult smooth problems lead directly to the need to solve nonsmooth problems which are either smaller in dimension or simpler in structure This book contains twenty five papers written by forty six authors from twenty countries in five continents It includes papers on theory algorithms and applications for problems with first order nondifferentiability the usual sense of nonsmooth optimization second order nondifferentiability nonsmooth equations nonsmooth variational inequalities and other problems related to nonsmooth optimization

Recent Advances in Structural Engineering, 2005-02 This book contains state of the art review articles on specific research areas in the civil engineering discipline the areas include geotechnical engineering hydraulics and water resources engineering and structural engineering The articles are written by invited authors who are currently active at the international level in their respective research fields

Recent Advances in Differential Equations and Mathematical Physics Nikolai Chernov, 2006 Surveys topics in differential equations that are associated with mathematical physics This book includes such topics as asymptotic formulas for the ground state energy of fermionic gas J self adjoint Dirac operators and spectral theory of Schrodinger operators It is suitable for mathematicians and physicists

Mathematical Thinking David Tall, 2006-04-11 Advanced Mathematical Thinking has played a central role in the development of human civilization for over two millennia Yet in all that time the serious study of the nature of advanced mathematical thinking what it is how it functions in the minds of expert mathematicians how it can be encouraged and improved in the developing minds of students has been limited to the reflections of a few significant individuals scattered throughout the history of mathematics In the twentieth century the theory of mathematical education during the compulsory years of schooling to age 16 has developed its own body of empirical research theory and practice But the extensions of such theories to more advanced levels have only occurred in the last few years In 1976 The International Group for the Psychology of Mathematics known as PME was formed and has met annually at different venues round the world to share research ideas In 1985 a Working Group of PME was formed to focus on Advanced Mathematical Thinking with a major aim of producing this volume The text begins with an introductory chapter on the psychology of advanced mathematical thinking with the remaining chapters grouped under three headings the nature of advanced mathematical thinking cognitive theory and reviews of the progress of cognitive research into different areas of advanced mathematics **Advanced Mathematical**

Science for Mobility Society Kazushi Ikeda, Yoshiumi Kawamura, Kazuhisa Makino, Satoshi Tsujimoto, Nobuo Yamashita, Shintaro Yoshizawa, Hanna Sumita, 2024-03-13 This open access book presents the mathematical methods for huge data and network analysis The automotive industry has made steady progress in technological innovations under the names of Connected Autonomous Shared Electric CASE and Mobility as a Service MaaS Needless to say mathematics and informatics are important to support such innovations As the concept of cars and movement itself is diversifying they are indispensable for grasping the essence of the future mobility society and building the foundation for the next generation Based on this idea Research unit named Advanced Mathematical Science for Mobility Society was established at Kyoto University as a base for envisioning a future mobility society in collaboration with researchers led by Toyota Motor Corporation and Kyoto University This book contains three main contents 1 Mathematical models of flow 2 Mathematical methods for huge data and network analysis 3 Algorithm for mobility society The first one discusses mathematical models of

pedestrian and traffic flow as they are important for preventing accidents and achieving efficient transportation The authors mainly focus on global dynamics caused by the interaction of particles The authors discuss many body particle systems in terms of geometry and box ball systems The second one consists of four chapters and deals with mathematical technologies for handling huge data related to mobility from the viewpoints of machine learning numerical analysis and statistical physics which also includes blockchain techniques Finally the authors discuss algorithmic issues on mobility society By making use of car sharing service as an example of mobility systems the authors consider how to construct and analyze algorithms for mobility system from viewpoints of control optimization and AI
