Noakes, 2001-07 During growth and development of children body composition predominantly fat and lean body mass plays a central role The body composition parameters are important determinants of child health also in regard to obesity This volume is a collection of articles presenting a broad scope of body composition experiments ranging from simple anthropometry to the technologically advanced technique of magnetic resonance imaging MRI It is an exceptional source of information on anthropometric measurements bioelectrical impedance analysis BIA and other methods of body composition analysis in children Beyond that the numerous considerations influencing the acceptability of the apparently simple BIA method in children are discussed in several contributions Stimulating and up to date this book is a distinctive reference for pediatricians nutritionists anthropologists exercise and sport scientists as well as sport medicine specialists **Handbook of Obesity -- Volume 1** George A. Douglas W. Wilmore, Yvon A. Carpentier, 2012-12-06 Nutritional support of critically ill patients is a major treatment modality which will enhance recovery and shorten convalescence New knowledge has emphasized that much of the organ dysfunction associated with sepsis and altered blood flow is related to oxidative injury Specific nutrients are highly effective in counteracting these effects and their early administration may attenuate cellular damage and multi organ failure Patient outcome may also be enhanced by the route of feeding administration of newer nutrient combinations utilization of evolving methods of monitoring and the use of growth factors This new knowledge has evolved to a new area of metabolic support which is addressed for the first time by a group of international experts The topics presented and general conclusions are of major importance to the practitioners in this field for they show for the first time a departure from the more traditional approaches of nutritional support in patients with life threatening diseases **Nutrition in Kidney Disease** Laura D. Hauspie, Noël Cameron, Luciano Molinari, 2004-06-24 In order to gain an understanding of the dynamics of human individual and average growth patterns it is essential that the right methods are selected There are a variety of methods available to analyse individual growth patterns to estimate variation in different growth measures in populations and to relate genetic and environmental factors to individual and average growth This volume provides an overview of modern techniques for the assessment and collection of growth data and methods of analysis for individual and population growth data The book contains the basic mathematical and statistical tools required to understand the concepts of the methods under discussion and worked examples of analyses but it is neither a mathematical treatise nor a recipe book for growth data analysis Aimed at junior and senior researchers involved in the analysis of human growth data this book will be an essential reference for

anthropologists auxologists and paediatricians Obesity Treatment David B. Allison, F. Xavier Pi-Sunyer, 2012-12-06
Treatment outcome has certainly improved since Stunkard and McLaren Hume 1959 reviewed the literature and found that less than 25% of obese patients lost 20 pounds or more and less than 5% lost 40 pounds or more. However, one of the few points on which almost all obesity researchers agree is that to date our results are quite modest and we are generally unsuccessful in promoting effective weight maintenance among obese persons. As the title of a more recent article, Improving long term weight loss: Pushing the limits of treatment, Brownell Jeffrey 1987, emphasis added, suggests, many believe that we have pushed our current treatment paradigms to the limit. It was with this background in mind that we organized the meeting from which these proceedings issue. The purpose of the three day international meeting was to evaluate the current knowledge base and conceptual paradigms of obesity treatment and to suggest directions for future research and clinical practice. Rather than simply for research reporting, the meeting was primarily for research generation. All speakers were established scientists in the field who were asked to summarize our state of knowledge in a given area rather than present the results of their latest research. Great efforts were taken to ensure that panel discussions occupied a central portion of the conference and that the questions, What else do we need to know and How do we find it out, were consistently addressed.
