Scientific Metaphysics Don Ross, James

Ladyman, Harold Kincaid, 2013-01-17 **Scientific Metaphysics** collects original essays by some of the world's leading philosophers of science on the question of whether metaphysics can and should be naturalized that is conducted as a part of natural science. Some people will think that the idea of naturalized metaphysics is a contradiction in terms on the grounds that metaphysics is by definition about matters that transcend the domain of empirical inquiry. Most of the authors here disagree and hold that if metaphysics is to hold out any prospect of identifying objective truths it must be continuous with and inspired by science. Many go further and argue that it should be conducted in such a way as to be of some positive use to science. But beyond this each contributor differs with one another on numerous points of detail and emphasis. The essays presented here offer various points of view on the relationship between naturalized metaphysics, more traditional forms of metaphysics, and the wider history of philosophy. The discussions are rich in examples drawn from across the sciences: physics, biology, economics, psychology, and others. Several chapters explore new ideas about the complex relationships between metaphysics, physics, and mathematics. At stake in the end is the question of whether metaphysics should give way to science and disappear from contemporary inquiry or continue as an activity that unifies the particular sciences into a single naturalistic worldview.

The Year's Work in Classical Studies Classical Association (Great Britain), 1918

On the Study and Difficulties of Mathematics Augustus De Morgan, 1898

Laws And Explanation In The Social Sciences Lee C McIntyre, 2018-10-08

The first full-length defense of social scientific laws to appear in the last twenty years, this book upholds the prospect of the nomological explanation of human behavior against those who maintain that this approach is impossible, impractical, or irrelevant. By pursuing an analogy with the natural sciences, McIntyre shows that the barriers to nomological inquiry within the social sciences are not generated by factors unique to social inquiry but arise from a largely common set of problems that face any scientific endeavor. All of the most widely supported arguments against social scientific laws have failed largely due

to adherence to a highly idealized conception of nomologicality allegedly drawn from the natural sciences themselves and the limited doctrine of descriptivism. Basing his arguments upon a more realistic view of scientific theorizing that emphasizes the pivotal role of redescription in aiding the search for scientific laws, McIntyre is optimistic about attaining useful law-like explanations of human behavior.
