**Drug Safety** Nigel S. B. Rawson, 2016-11-08 With Big Pharma garnering an increasing number of negative headlines due to reports of adverse drug reactions and a surge in prescription drug addiction and overdose deaths many people are increasingly skeptical about the safety of modern pharmaceuticals and the moral integrity of the pharmaceutical industry This book was written to provide a balanced perspective on drug safety risks No therapeutic prescription drug is entirely risk free Before receiving marketing approval new drugs go through arduous and expensive testing processes that can take up to a decade and cost over two billion dollars While not perfect the process is far from a Wild West environment where big pharmaceutical companies ride roughshod over government regulators However author and pharmacoepidemiologist Nigel Rawson argues the antipathy that is common between governments pharmaceutical industry and academic experts in Canada needs to change to an environment of collaboration and partnership to enhance our ability to respond in a timely fashion to future pharmaceutical crises While directed mainly at students in the health sciences and pharmaceutical professionals this book will be of interest to anyone including lay people and policy makers who would like to know more about the evolution of the prescription drug evaluation and risk assessment process Although the book focuses primarily on Canada it makes

comparisons with the United States and Europe and several of the author's recommendations for how to improve the prescription drug evaluation process are applicable worldwide *International Trade and Health Protection* Tracey Epps, 2008-01-01 This detailed and fully referenced text is a valuable resource both for practitioners and academics Michael Blakeney *International Trade Law and Regulation* Interspersing law with societal context this volume by Dr Epps stands out among WTO analysis The author offers a delightfully balanced view on the nature and origin of SPS measures including references to history whilst at the same time mastering the hard law of the SPS Agreement in detail Practitioners will enjoy the detailed analysis of WTO dispute settlement A reference book for practice and academia and also a very very good read Geert Van Calster Katholieke Universiteit Leuven Belgium This book examines and critiques the WTO's Agreement on the Application of Sanitary and Phytosanitary Measures SPS Agreement asking whether it strikes an appropriate balance between conflicting domestic health protection and trade liberalization objectives It pays particular attention to situations likely to occur but not yet fully examined either in the literature or in WTO law most importantly where public opinion demands regulation in the face of scientific uncertainty as to the existence or otherwise of a health risk Tracey Epps concludes that the SPS Agreement's science based framework is capable of dealing with the differing objectives of health and trade and that it provides countries with more flexibility to respond to scientific uncertainties and public sentiment than many critics contend This conclusion is strongly influenced by a positive analysis of domestic regulatory decision making which finds potential for regulatory capture by domestic protectionist interests and thus emphasizes the importance of ensuring that decisions are made on a sound and principled basis Including a historical overview of disputes over trade and health since the 1800s this book provides a comprehensive analysis of and new perspective on an important area of intersection between international trade law and domestic policy It will be of interest to a wide ranging audience including legal and non legal academics policy makers and analysts in the field of risk regulation trade law practitioners in governments and lawyers and analysts in international institutions

*Risk Evaluation and Management* V.T. Covello, Joshua Menkes, J.L. Mumpower, 2012-12-06 Public attention has focused in recent years on an array of technological risks to health safety and the environment At the same time responsibilities for technological risk assessment evaluation and management have grown in both the public and private sectors because of a perceived need to anticipate prevent or reduce the risks inherent in modern society In attempting to meet these responsibilities legislative judicial regulatory and private sector institutions have had to deal with the extraordinarily complex problems of assessing and balancing risks costs and benefits The need to help society cope with technological risks has given rise to a new intellectual endeavor the social and behavioral study of issues in risk evaluation and risk management The scope and complexity of these analyses require a high degree of cooperative effort on the part of specialists from many fields Analyzing social and behavioral issues requires the efforts of political scientists sociologists decision analysts management scientists economists psychologists philosophers and policy analysts among others

**Governing Disasters** A. Alemanno, 2011-01-01 The challenges posed by risky decisions are well documented These decisions become even more daunting when they must be made in a midst of a crisis Using the European volcanic risk crisis as the principal case study Alberto Alemanno and the other

contributors to this thought provoking volume derive valuable lessons for how policy makers can cope with the attendant time pressures uncertainties coordination issues and risk communication problems Once the next emergency risk situation occurs it may be too late to learn about how to respond Governing Disasters should be required reading for all policy makers and risk analysts in advance of the next international risk crisis W Kip Viscusi Vanderbilt University US and Editor Journal of Risk and Uncertainty Catastrophes present us with a paradox Many people don't think they will happen so before a catastrophe regulations are typically viewed as unnecessarily invasive But in the aftermath of a disaster everybody suddenly blames the government for not having been strict enough Overregulation often follows In light of the unprecedented series of catastrophes in recent years more than ever top leaders in government and business must understand and overcome this regulatory challenge Alberto Alemanno's innovative book tells you how Erwann Michel Kerjan The Wharton School's Center for Risk Management US Even the best laid policy plans go awry What do we do when despite our best preventive efforts a surprise crisis occurs How do we regulate a disaster while it is unfolding From volcanoes to tornadoes and tsunamis to terrorists extreme events test our resilience In this illuminating volume regulatory scholar Alberto Alemanno and his colleagues diagnose the complex combination of natural disasters and flawed institutions that make these crises so difficult to manage They offer a set of insights and remedies that must be read by anyone concerned to deal with disasters in the future Jonathan B Wiener Duke University US This comprehensive edited volume makes an important and much needed contribution to an increasingly important dimension of risk assessment and management namely emergency risk regulation Drawing upon the responses of government businesses and the public to the 2010 volcanic eruption in Iceland which disrupted European air travel it offers important lessons for policy makers who are likely to confront similar unanticipated global risks The recent nuclear power disaster in Japan makes this volume both timely and prescient David Vogel University of California Berkeley US Emergency crises have always tested our ability to organise and swiftly execute a coordinated response Both natural and unnatural disasters pose new questions to which previous experience provides only limited answers These challenges are arguably greater than ever in a more globalised world confronted by a truly transnational hazard This is the first volume that addresses the complexities of the volcanic ash cloud that overshadowed Europe in April 2011 but has subsequently struck again in Australia Chile and Europe It does so from a multidisciplinary perspective drawing upon research from economics law sociology and other fields as well as volcanology and leading expertise in jet engineering Whilst our knowledge base is wide ranging there is a common focus on the practical lessons of the ash cloud crisis both for subsequent eruptions and for emergency risk regulation more generally Among many other insights Governing Disasters explains why it was that industry and regulators were largely unprepared for a phenomenon about which we were not scientifically ignorant It concludes that the toolbox of risk regulation should not be expected to provide ready made solutions but applied flexibly creatively and with some humility This unique and timely resource will be useful to policymakers scholars

officials of international organizations research institutions and consumer groups who want to acquire or further develop their capacities for risk regulation For teaching purposes it is ideal for courses on risk regulation disaster law and policy and crisis management or as a supplement in courses on environmental law transport law space law or land use *Management of Health Risks from Environment and Food* Hajime Sato,2009-10-30 This book examines the policy and politics of two health risks which have recently become prominent social issues in many countries One is the issue of asbestos as an environmental risk to humans and another is that of bovine spongiform encephalitis BSE or mad cow disease as an animal disease and of its variant Creutzfeldt Jakob disease CJD as a human food risk Employing a set of analytical frameworks in political science each case study explores how the issues emerged agendas got set alternatives were chosen and policies were implemented Through the analysis it is examined how safety and public reassurance were pursued in the countries studied Japan the UK France the USA and Korea Exploration of the successes and failures in their efforts discloses the key elements to successful health risk management
