Safer Future Reducing The Impacts Of Natural Disasters:

A Safer Future National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, U.S. National Committee for the Decade for Natural Disaster Reduction, 1991-02-01 Initial priorities for U S participation in the International Decade for Natural Disaster Reduction declared by the United Nations are contained in this volume It focuses on seven issues hazard and risk assessment awareness and education mitigation preparedness for emergency response recovery and reconstruction prediction and warning learning from disasters and U S participation internationally The committee presents its philosophy of calls for broad public and private participation to reduce the toll of disasters

A Safer Future. Reducing the Impacts of Natural Disasters, 1991 In 1989 the U S National Committee for the Decade for Natural Disaster Reduction was formed at the request of the federal government to develop a Decade program for the nation This Committee believes that the trend of increasing losses to natural disasters can be reversed This change can be achieved by integrating hazard reduction policy and practice into the mainstream of community activities throughout the nation and the world The Decade presents an opportunity to reassess the approach to natural hazards and to develop strategies for reducing losses by stressing prevention and preparedness while sustaining and enhancing essential disaster response relief and recovery capabilities The Committee proposes a multidisciplinary program that integrates the following elements hazard and risk assessments awareness and education mitigation preparedness for emergency response recovery and reconstruction prediction and warning strategies for learning from disasters and international cooperation These seven elements must be developed in union so that collectively they can provide a framework for hazard reduction over the next 10 years and beyond This report sets forth recommendations for each element National Mitigation Strategy

James L. Witt, 1997-06 In response to the unacceptable loss of life and property from recent natural disasters and the awesome prospect of even greater catastrophic loss in the future the National Mitigation Strategy NMS was developed to provide a conceptual framework to reduce these losses Hazard mitigation involves recognizing and adapting to natural forces and is defined as any sustained action taken to reduce or eliminate long term risk to human life and property Contents why a NMS designing the strategy basic principles and goals of the NMS major elements and strategic objectives of the NMS mitigation action plan Tables

Cooperating with Nature A Joseph Henry Press book,1998-07-09 This volume focuses on the breakdown in sustainability the capacity of the planet to provide quality of life now and in the future that is signaled by disaster The authors bring to light why land use and sustainability have been ignored in devising public policies to deal with natural hazards They lay out a vision of sustainability concrete suggestions for policy reform and procedures for planning The book chronicles the long evolution of land use planning and identifies key components of sustainable planning for hazards Stressing the importance of balance in land use the authors offer principles and specific reforms for achieving their visions of sustainability

Bits of Power National Research Council,Division on Engineering and Physical Sciences,Commission on Physical Sciences, Mathematics, and Applications,Committee on Issues in the Transborder Flow of Scientific Data,1997-09-07 Since Galileo corresponded with Kepler the community of scientists has become increasingly international A DNA sequence is as significant to a researcher in Novosibirsk as it is to one in Pasadena And with the advent of electronic communications technology these experts can share information within minutes What are the consequences when more bits of scientific data cross more national borders and do it more swiftly than ever before Bits of Power assesses the state of international exchange of data in the natural sciences identifying strengths weaknesses and challenges The committee makes recommendations about access to scientific data derived from public funding The volume examines Trends in the electronic transfer and management of scientific data Pressure toward commercialization of scientific data including the economic aspects of government dissemination of the data The implications of proposed changes to intellectual property laws and the role of scientists in shaping legislative and legal solutions Improving access to scientific data by and from the developing world Bits of Power explores how these issues have been addressed in the European Community and includes examples of successful data transfer activities in the natural sciences The book will be of interest to scientists and scientific data managers as well as intellectual property rights attorneys legislators government agencies and international organizations concerned about the electronic flow of scientific data

Assessment of Proposed Partnerships to Implement a National Landslide Hazards Mitigation Strategy National Research Council,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Committee on the Review of National Landslide Hazards Mitigation Strategy,2002-08-12 Landslides are a component of those agents of nature that transport rock and soil from mountains or hillsides to streams lakes and seas where new sedimentary rocks begin to form Therefore as well as destructive forces that can be induced by

human activity landslides are part of the earth's natural cyclic process of uplift erosion and sedimentation. With the growth of human population and the increasing habitation of ever steeper slopes and higher altitudes, Man is both experiencing the effects of landslides and causing landslides with increasing frequency. These adverse effects include loss of life, injury and damage to public and private works as well as environmental damage. Accordingly, it is an opportune time to address the hazard posed by landslides and to assess strategies to mitigate that hazard.

Assessment of Proposed Partnerships to Implement a National Landslide Hazards Mitigation Strategy Interim Reports is an interim statement addressing the U.S. Geological Survey's proposal for a national landslide hazards mitigation strategy. The scope of this interim report is constrained to assessing whether all the partners necessary for such a national strategy have been identified by the proposal. Conclusions and recommendations to address the remainder of the statement of task will be presented in the committee's final report. It will include comments regarding effective partnership implementation, funding strategies required for an effective mitigation program, and the balance between different components of a national strategy. In addition, in this interim report, the committee offers a number of comments intended as interim guidance for the U.S. Geological Survey as it continues to plan a national strategy.

At Risk Piers M. Blaikie, 1994. Examines the significance of the human factor which is as much of a cause of disasters as the natural environment. Practical and policy conclusions are drawn with a view to disaster reduction and the promotion of safer environments.

Traumatic Stress John R. Freedy, S.E. Hobfoll, 2013-06-29. Renowned scientists and practitioners provide a concise summary of current theory, research, and clinical practice regarding traumatic stress. An integrative biopsychosocial theory of trauma response provides a framework for the book. Chapters consider the frequency and likely mental health consequences of a wide range of traumatic events, including military trauma, violent crime, natural and technological disasters, accidental injury, and torture. This comprehensive reference features state-of-the-art psychosocial and biological treatments and community-based intervention strategies.

Recent Studies in Geophysical Hazards Mohammed I. El-Sabih, Tad S. Murty, Srinivasan Venkatesh, F. Siccaldi, K. Andah, 2012-12-06. Over the past 20 years, the costs of natural disasters have escalated significantly. The lives of over 800 million people have been disrupted, and the number of catastrophes has nearly quadrupled. At present, the increasing global threat of natural disasters, in spite of our increased knowledge, is ominous. With the growth in world population, the increasing of resources in newly developing areas, and the increasing cost and sophistication of engineering structures and technical installations, there is an urgent need to seek to understand the potential threats posed by natural hazards and to ascertain the best ways of mitigating their damaging effects. To meet this urgent threat, the United Nations UN General Assembly in December 22, 1989, passed a Resolution which declared the 1990s to be the International Decade for Natural Disaster Reduction (IDNDR). As a contribution to the decade, the International Symposium on Hazards '91 was held in Perugia, Italy, during 4-9 August 1991. The conference was attended by specialists from 34 countries, and a total of 110 papers were presented at 20 sessions covering a very broad

range of topics which proved to be of significant value for future research The sixteen articles included in this book provide a unique overview of the state of the science in geophysical hazards including climatic atmospheric hydrological and geological hazards Furthermore the results of a panel on the IDNDR and the recommendations adopted during the meeting are presented at the end of this volume Recent Studies in Geophysical Hazards is thus an excellent reference source for scientists engineers and policy makers

International Perspectives on Natural Disasters: Occurrence, Mitigation, and Consequences Joseph P. Stoltzman, John Lidstone, Lisa M. DeChano, 2007-03-11 Reports of natural disasters fill the media with regularity Places in the world are affected by natural disaster events every day Such events include earthquakes cyclones tsunamis wildfires the list could go on for considerable length In the 1990s there was a concentrated focus on natural disaster information and mitigation during the International Decade for Natural Disasters Reduction IDNDR The information was technical and provided the basis for major initiatives in building structures designed for seismic safety slope stability severe storm warning systems and global monitoring and reporting Mitigation or planning in the event that natural hazards prevalent in a region would suddenly become natural disasters was a major goal of the decade long program During the IDNDR this book was conceptualized and planning for its completion began The editors saw the need for a book that would reach a broad range of readers who were not actively or directly engaged in natural disasters relief or mitigation planning but who were in decision making positions that provided an open window for addressing natural disaster issues Those people were largely elected public officials teachers non governmental organization staff and staff of faith based organizations Those people for the most part come to know very well the human and physical characteristics of the place in which they are based With that local outreach in mind the editors intended the book to encourage readers to 1

Promoting Risk Robert A.

Stallings,1995-01-01 According to Stallings the earthquake threat has failed to achieve the status of a fully constructed social problem owing to the nature of the resources available to risk promoters and the strategy and tactics they have used to promote the risk of earthquakes The results of his examination of a partially constructed social problem will prove useful not only to those exploring the dynamics of the social problems process but also to those who study risk public policy making and environmental issues where risk is involved
