Ethics in Obstetrics and Gynecology Laurence B. McCullough, Frank A. Chervenak, 1994 This book offers a comprehensive and clinically practical approach to ethics in the everyday practice of obstetrics and gynecology The topics the authors address include contraception abortion selective termination of multifetal pregnancies gynecologic cancer in vitro fertilization surrogacy prenatal diagnosis fetal therapy cephalocentesis prematurity HIV infection and court ordered cesarean delivery The issues involved in making decisions in many of these areas are a source of conflict and lead to crisis between the physician and patient One of the book's strengths is its emphasis on prevention and if prevention fails management of the conflicts and crises which arise in these areas of medicine The authors develop their preventative and management strategies on the basis of a framework for bioethics in the clinical setting This

framework is rigorously established and defended The authors argue that four virtues self effacement self sacrifice compassion and integrity generate the physician s obligation to protect and promote the patient s interest They then identify the three types of patient s interests social role interests subjective interests and deliberative interests and they reinterpret the ethical principles of beneficence and respect for autonomy in terms of these The concept of the fetus as patient the physician s obligation to third parties and the moral standing of fathers and family members are also addressed The implications of their argument sets the stage for the discussions of prevention and management in the remaining sections of the book *Ethics in Obstetrics and Gynecology* is a unique addition to the literature in both biomedical ethics and obstetrics and gynecology It demonstrates that ethics should be regarded as an essential part of obstetrics and gynecology and that clinical practice is incomplete without it

Almeder,1989-04-06 *Biomedical Ethics Reviews* is an annual publication designed to review and update the literature on issues of central importance in bioethics today Ordinarily more than one topic is discussed in each volume of *Biomedical Ethics Reviews* This year however we have decided to devote the entire volume of *Biomedical Ethics Reviews* 1988 to disussion of one topic namely AIDS The rationale for this decision should be clear AIDS is arguably the most serious public health threat facing our nation today and the character of the disease is such that it creates special problems for ethicists philosophers theologians educators jurists health care professionals and politicians Indeed the questions that AIDS gives rise to are so numerous and complex that no one text could hope to treat them exhaustively Still if it is impossible in anyone text to deal with all of the perplexing difficulties that AIDS generates it nevertheless remains true that each addition to the AIDS literature contributes to our collective knowledge and in so doing brings us one step closer to resolving at least some of the problems associated with the disease We believe that the articles included in the present volume of *Biomedical Ethics Reviews* serve this purpose admirably and we hope the reader will agree James M Humber Robert F Almeder vii Contributors Ronald Carson Medical Humanities Institute University of Texas Medical Branch Galveston Texas David J
