Connected by the Sea Lucy Blue, Frederick M. Hocker, Anton Englert, 2016-03-31 The 10th International Symposium on Boat and Ship Archaeology was held in Roskilde Denmark in 2003

The theme of the meeting was Connected by the Sea and was designed to emphasize the role of the sea seafaring and watercraft as bridges rather than barriers Maritime archaeology tends to take place within national borders with a national focus yet the very premise of seafaring is the desire to travel beyond the horizon to establish contact with other places and cultures The conference theme was chosen to encourage the maritime archaeological community to think in international terms Centauri Dreams Paul Gilster,2013-04-18 I wrote this book because I wanted to learn more about interstellar flight Not the Star Trek notion of tearing around the Galaxy in a huge spaceship that was obviously beyond existing technology but a more realistic mission In 1989 I had videotaped Voyager 2's encounter with Neptune and watched the drama of robotic exploration over and over again I started to wonder whether we could do something similar with Alpha Centauri the nearest star to the Sun Everyone seemed to agree that manned flight to the stars was out of the question if not permanently then for the indefinitely foreseeable future But surely we could do something with robotics And if we could figure out a theoretical way to do it how far were we from the actual technology that would make it happen In other words what was the state of our interstellar technology today those concepts and systems that might translate into a Voyager to the stars Finding answers meant talking to people inside and outside of NASA I was surprised to learn that there is a large literature of interstellar flight Nobody knows for sure how to propel a spacecraft fast enough to make the interstellar crossing within a time scale that would fit the conventional idea of a mission but there are candidate systems that are under active investigation Some of this effort begins with small systems that we'll use near the Earth and later hope to extend to deep space missions
