Salinity Tolerance in Plants: Methods, Mechanisms and Management B.K. Garg, I.C. Gupta, 2011-03-01 Salinity tolerance in plants is a complex problem encompassing numerous morphological physiological and biochemical processes and adaptations at the cellular sub cellular and whole plant levels The book comprising eleven chapters deals with diverse aspects of salt tolerance including plant response to salinity and sodicity crop tolerance at different growth stages and criteria for evaluating the same The mechanism of salt injury viz osmotic ionic and nutrient imbalance has been dealt with adopting an integrated approach Likewise the recent information on photosynthesis respiration carbohydrate nitrogen and protein metabolism enzyme dynamics and plant hormones as well as nodulation and symbiotic nitrogen fixation in legumes has been elaborated comprehensively Special attention has been given to the interaction between essential nutrients and salinity as it is vital for alleviation of adverse effects of salt stress The synthesis of knowledge on different mechanisms of salt resistance including osmoregulation with organic and inorganic solutes has also been presented Various methods of introducing salt tolerance in plants such as breeding genetic variations physiological approaches tissue culture somaclonal variation somatic hybridation and recombinant DNA technology have been discussed The nature and properties of salt affected soils and groundwaters and principles for amelioration and management of these critical problems have been included in this book Furthermore Afforestation and Agroforestry techniques for salt affected soils with emphasis on salt tolerant tree species and suitable tree crop combinations also find their much needed due space in the present book **Plant Adaptation and**

Phytoremediation M. Ashraf, M. Ozturk, M. S. A. Ahmad, 2010-08-17 The problems engendered by the conflicting imperatives of development and ecology show no sign of ending and every day more locations are added to the list of landscapes poisoned by human activity This vital book featuring an international set of authors is a key reference for researchers and environmental managers as well as anyone involved in the mining industry or landscape remediation The comprehensive coverage of current approaches to phytoremediation begins by examining the problem It looks at natural and human induced toxins and their effects on natural vegetation as well as agricultural crops Particular attention is paid to the two largest challenges to remediation heavy metals and the salt stress that is impeding agricultural productivity worldwide The text moves on to focus on the efficacy of different plant species in removing toxic pollutants from the environment Along with analysis of a number of case studies this section includes new and updated information on the mechanism of toxin tolerance in plants *Somaclonal Variation in Crop Improvement I* Professor Dr. Y. P. S. Bajaj, 2013-03-14 [Towards the rational use of high salinity tolerant plants](#)

Helmut Lieth, A.A. Al Masoom, 2012-12-06 The Symposium on high salinity tolerant plants held at the University of Al Ain in December 1990 dealt primarily with plants tolerating salinity levels exceeding that of ocean

water and which at the same time are promising for utilization in agriculture or forestry These plants could be very useful for a country like the UAE where fresh water resources are very scarce and the groundwater available at some places is already very salty More than 60 million woody trees shrubs have been planted so far and more are planned for the inland plains underlain with brackish groundwater These species were no solution for the widely barren shoreline of the UAE Here mangrove species were of potential use and one species *Avicennia Marina* occurs widely and has been successfully planted for about a decade Converting the tree plantations into economically useful cropping systems is still a problem requiring much research and development The book deals in several sections with conventional irrigation systems using marginal water The species used in these systems are mostly hybrids of conventional crops The irrigation systems however have similar problems as may be expected for irrigation with seawater Papers show the participants experiments in this area The volume serves as a link between scientists working for the improvement of classical irrigation systems and those interested in the application of a new dimension of salinity levels for irrigation water

Crops as Enhancers of Nutrient Use R Duncan, 2012-12-02 *Crops as Enhancers of Nutrient Use* examines the various plant and soil factors that contribute to nutrient use efficiency of plants It attempts to address policies regarding Low Input Sustainable Agriculture LISA conservation oriented cropping systems and reductions in environmental contaminants It also presents longer term remedies to some of the inherent problems of high volume applications of expensive fertilizer nutrients This book emphasizes plant soil interaction particularly nutritional interactions involving rhizosphere microbes and stress on the root system Stress factors include moisture and low and high pH The book also covers the genetic and physiological response of plant to nutrients at the cellular level on a whole plant basis and when subjected to stress This book will contribute to the development of a more cost effective and judicious nutrient usage of major crops

Salinity Tolerance in Plants Richard C. Staples, Gary H. Toenniessen, 1984 **Improving Crop Resistance to Abiotic Stress** Narendra Tuteja, Sarvajeet S. Gill, Antonio F. Tiburcio, Renu Tuteja, 2012-04-30 The latest update on improving crop resistance to abiotic stress using the advanced key methods of proteomics genomics and metabolomics The wellbalanced international mix of contributors from industry and academia cover work carried out on individual crop plants while also including studies of model organisms that can then be applied to specific crop plants

Crop Improvement Utilizing Biotechnology Rup Lal, 2019-07-23 This book discusses somaclonal variation in crop improvement the role of tissue culture in rapid clonal propagation and production of pathogen free plant protoplasts in crop improvement cell selection and long term high frequency regeneration of cereals and legumes agrobacteria mediated gene transformation and vectors for gene cloning in plants and plant frost injury and its management

Salinity and Water Stress M. Ashraf, M. Ozturk, Habib-ur-Rehman Athar, 2008-12-26 Salinity and water stress limit crop productivity worldwide and generate substantial economic losses each year yet innovative research on crop and natural resource management can reveal cost effective ways in which farmers can increase both their productivity and their income

Presenting recent research findings on salt stress water stress and stress adapted plants this book offers insights into new strategies for increasing the efficiency of crops under stressful environments The strategies are based on conventional breeding and advanced molecular techniques used by plant physiologists and are discussed using specific case studies to illustrate their potential The book emphasizes the effects of environmental factors on specific stages of plant development and discusses the role of plant growth regulators nutrients osmoprotectants and antioxidants in counteracting their adverse affects Synthesising updated information on mechanisms of stress tolerance at cell tissue and whole plant level this book provides a useful reference text for post graduate students and researchers involved in the fields of stress physiology and plant physiology in general with additional readership amongst researchers in horticulture agronomy crop science conservation environmental management and ecological restoration
