with an examination and analysis of resource policy options with particular emphasis on fisheries management policies at the international level where some of the most difficult resource management problems are found. The authors maintain that capture fishery resources are properly viewed as a part of society's portfolio of natural capital assets. Consequently, a central theme of the book is that managing such resources should be viewed as asset management through time. Written by two leading authorities, this accessible textbook has been specially developed to meet the needs of students taking courses on fisheries management as well as professionals working in this area for governments and international organisations.
