Monte Carlo and Las Vegas have become synonymous with casino gambling. Both destinations featured it as part of a broad variety of leisure and consumption opportunities that normalized games of chance and created emotional atmospheres that supported the hedonistic aspects of gambling. Urban spaces and architecture were carefully designed to enable a rapid growth of the casino industry and produce experiences on previous unimaginable scale. *Feeling Lucky* is a making-of story about cities which acquired a strange and captivating allure of mystery around them. It is more than a mere descriptive account; however, combining urban history, the history of consumption, and sociological approaches, it presents a compelling comparative history of Monte Carlo and the Las Vegas Strip between the 1860s and 1970s. Paul Franke takes the reader on a journey from arriving at the cities through the carefully planned urban environments and into the famous casinos. The analysis follows the paths contemporary gamblers would have taken right to the gambling tables and to the shifting gambling practices across a century. Franke shows that casino entrepreneurs succeeded in producing and selling gambling experiences by controlling spaces, adapting leisure practices, and appealing to specific markets. Gamblers, on the other hand, regarded Monte Carlo and Las Vegas as places to engage in games of chance that would allow them to preserve their political, cultural, and moral identities. *Titan After Cassini-Huygens* Rosaly M.C. Lopes, Charles Elachi, Ingo Mueller-Wodarg, Anezina Solomonidou, 2025-01-20

Titan After Cassini-Huygens is the most up-to-date and comprehensive coverage of our knowledge on Titan, including results and insights from the joint NASA-European Space Agency-Italian Space Agency mission Cassini-Huygens and the conclusions drawn by experts following detailed analysis of the mission data. Our knowledge of Titan has increased substantially due to observations from the Cassini-Huygens mission, which ended in 2017. Since then, observations from Earth, as well as laboratory and theoretical studies, have continued to add to our knowledge. These conclusions, combined with the latest ground-based and theoretical research, provide the most recent understanding of the science of Titan, covering the origin and evolution of Titan, its magnetic and plasma environment, surface, interior structure, geology, atmosphere, and the astrobiological potential for the oceans on the moon. The first book of the new COSPAR book series *Titan After Cassini-Huygens* is an integral reference for scientists, researchers, and academics working on Titan or ocean worlds. Part of the COSPAR Book Series, Edited by Jean-Louis Fellous, former Executive Director of COSPAR Committee on Space Research, 2008. 2019. Details the total knowledge of Titan from Cassini-Huygens and subsequent observations from Earth, as well as laboratory and theoretical studies from the last decade. Covers all aspects of Titan, including origin and evolution, magnetic and plasma environment, surface, interior structure, geology, atmospheric science, and astrobiological potential. Provides detailed referenceable data from investigators of the Cassini spacecraft and Huygens probe, as well as the ALMA radio
