A. Miller, 2012-12-06 Insects as a group occupy a middle ground in the biosphere between bacteria and viruses at one extreme amphibians and mammals at the other The size and general nature of insects present special problems to the student of entomology For example many commercially available instruments are geared to measure in grams while the forces commonly encountered in studying insects are in the milligram range Therefore techniques developed in the study of insects or in those fields concerned with the control of insect pests are often unique Methods for measuring things are common to all sciences Advances sometimes depend more on how something was done than on what was measured indeed a given field often progresses from one technique to another as new methods are discovered developed and modified Just as often some of these techniques find their way into the classroom when the problems involved have been sufficiently ironed out to permit students to master the manipulations in a few laboratory periods Many specialized techniques are confined to one specific research laboratory Although methods may be considered commonplace where they are used in another context even the simplest procedures may save considerable time It is the purpose of this series 1 to report new developments in methodology 2 to reveal sources of groups who have dealt with and solved particular entomological problems and 3 to describe experiments which might be applicable for use in biology laboratory courses **Practical Tissue Culture Applications** Karl Maramorosch, 2012-12-02 *Practical Tissue Culture Applications* contains the proceedings of a conference held at the International Laboratory for Research on Animal Diseases in Nairobi Kenya August 24-29 1978 This book aims to describe some of the more important practical applications of in vitro techniques in a simple easily understandable manner Organized into three sections with a total of 27 chapters this book provides critical reviews describes various techniques and presents complete step by step methodology It emphasizes applications pertaining to the health and economy in developing nations In particular this book discusses the pitfalls in preparing general purpose culture media balanced salt solutions and the procedures followed in the development of modern in vitro techniques It also describes techniques for cultivation of vertebrate cells and organs plant
