Projective Geometry Oswald Veblen, John Wesley Young, 1918 *Calabi-Yau Manifolds and Related Geometries* Mark Gross, Daniel Huybrechts, Dominic Joyce, 2012-12-06 This is an introduction to a very active field of research on the boundary between mathematics and physics It is aimed at graduate students and researchers in geometry and string theory Proofs or sketches are given for many important results From the reviews An excellent introduction to current research in the geometry of Calabi Yau manifolds hyper K hler manifolds exceptional holonomy and mirror symmetry This is an excellent and useful book MATHEMATICAL REVIEWS **Geometry of the Quintic** Jerry Michael Shurman, 1997-01-31 This book helps students at the advanced undergraduate and beginning graduate levels to develop connections between the algebra geometry and analysis that they know and to better appreciate the totality of what they have learned The text demonstrates the use of general concepts by applying theorems from various areas in the context of one problem solving the quintic The problem is approached from two directions the first is Felix Klein s nineteenth century approach using the icosahedron The second approach presents recent works of Peter Doyle and Curt McMullen which update Klein s use of transcendental functions to a solution through pure iteration Algebraic Model Theory Bradd T. Hart, A. Lachlan, Matthew A. Valeriote, 2013-03-14 Recent major advances in model theory include connections between model theory and Diophantine and real analytic geometry permutation groups and finite algebras The present book contains lectures on recent results in algebraic model theory covering topics from the following areas geometric model theory the model theory of analytic structures permutation groups in model theory the spectra of countable theories and the structure of finite algebras Audience Graduate students in logic and others wishing to keep abreast of current trends in model theory The lectures contain sufficient introductory material to be able to grasp the recent results presented **Computational Line Geometry** Helmut Pottmann, Johannes Wallner, 2009-12-16 The geometry of lines occurs naturally in such different areas as sculptured surface machining computation of offsets and medial axes surface reconstruction for reverse engineering geometrical optics kinematics and motion design and modeling of developable surfaces This book covers line geometry from various viewpoints and aims towards computation and visualization Besides applications it contains a tutorial on projective geometry and an introduction into the theory of smooth and algebraic manifolds of lines It will be useful to researchers graduate students and anyone interested either in the theory or in computational aspects in general or in applications in particular **Geometry of Lie Groups** B. Rosenfeld, Bill Wiebe, 2013-03-09 This book is the result of many years of research in Non Euclidean Geometries and Geometry of Lie groups as well as teaching at Moscow State University 1947 1949 Azerbaijan State University Baku 1950 1955 Kolomna Pedagogical College 1955 1970 Moscow Pedagogical University 1971 1990 and Pennsylvania State University 1990 1995 My first books on Non Euclidean Geometries and Geometry of Lie groups were written in Russian and published in Moscow Non Euclidean Geometries 1955 Ro1 Multidimensional Spaces 1966 Ro2 and

Non Euclidean Spaces 1969 Ro3 In Ro1 I considered non Euclidean geometries in the broad sense as geometry of simple Lie groups since classical non Euclidean geometries hyperbolic and elliptic are geometries of simple Lie groups of classes B_n and D and geometries of complex n and quaternionic Hermitian elliptic and hyperbolic spaces are geometries of simple Lie groups of classes A_n and e_n Ro1 contains an exposition of the geometry of classical real non Euclidean spaces and their interpretations as hyperspheres with identified antipodal points in Euclidean or pseudo Euclidean spaces and in projective and conformal spaces Numerous interpretations of various spaces different from our usual space allow us like stereoscopic vision to see many traits of these spaces absent in the usual space

Groups of Exceptional Type, Coxeter Groups and Related Geometries N.S. Narasimha Sastry, 2014-04-02 The book deals with fundamental structural aspects of algebraic and simple groups Coxeter groups and the related geometries and buildings All contributing authors are very active researchers in the topics related to the theme of the book Some of the articles provide the latest developments in the subject some provide an overview of the current status of some important problems in this area some survey an area highlighting the current developments and some provide an exposition of an area to collect problems and conjectures It is hoped that these articles would be helpful to a beginner to start independent research on any of these topics as well as to an expert to know some of the latest developments or to consider some problems for investigation

Geometry D. A. Brannan, Matthew F. Esplen, Jeremy Gray, 1999 This is a textbook that demonstrates the excitement and beauty of geometry The approach is that of Klein in his Erlangen programme a geometry is a space together with a set of transformations of that space The authors explore various geometries affine projective inversive non Euclidean and spherical In each case the key results are explained carefully and the relationships between the geometries are discussed This richly

illustrated and clearly written text includes full solutions to over 200 problems and is suitable both for undergraduate courses on geometry and as a resource for self study

The Geometry of Multiple Images Olivier Faugeras, Quang-Tuan Luong, Théo Papadopoulo, 2001 This book formalizes and analyzes the relations between multiple views of a scene from the perspective of various types of geometries A key feature is that it considers Euclidean and affine geometries as special cases of projective geometry Over the last forty years researchers have made great strides in elucidating the laws of image formation processing and understanding by animals humans and machines This book describes the state of knowledge in one subarea of vision the geometric laws that relate different views of a scene Geometry one of the oldest branches of mathematics is the natural language for describing three dimensional shapes and spatial relations Projective geometry the geometry that best models image formation provides a unified framework for thinking about many geometric problems are relevant to vision The book formalizes and analyzes the relations between multiple views of a scene from the perspective of various types of geometries A key feature is that it considers Euclidean and affine geometries as special cases of projective geometry Images play a prominent role in computer communications Producers and users of images in particular three dimensional images require a framework for stating and solving problems The book offers a number of conceptual tools and theoretical results useful for the design of machine vision algorithms It also illustrates these tools and results with many examples of real applications
