Rebuilding Cities:

EcoCities Richard Register, 2006-04-01 Most of the world's population now lives in cities. So if we are to address the problems of environmental deterioration and peak oil adequately, the city has to be a major focus of attention. EcoCities is about rebuilding cities and towns based on ecological principles for the long-term sustainability, cultural vitality, and health of the Earth's biosphere. Unique in the literature is the book's insight that the form of the city really matters and that it is within our ability to change it and crucial that we do. Further, that the ecocity within its bioregion is comprehensible and doable and can produce a healthy and potentially happy future. EcoCities describes the place of the city in evolution, nature, and history. It pays special attention to the key question of accessibility and transportation and outlines design principles for the ecocity. The reader is encouraged to plunge in to its economics and politics, the kinds of businesses, planning, and leadership required. The book then outlines the tools by which a gradual transition to the ecocity could be accomplished. Throughout this new edition is generously illustrated with the author's own inspired visions of what such rebuilt cities might actually look like.

Rebuilding Cities from Medieval to Modern Times Percy Johnson-Marshall, 2017-07-12 Unique in the literature of planners, architects, and urban officials, *Rebuilding Cities* is a compendium and analysis of the achievements of city planning from the Ideal City of Palmanova in 1593 to the innovative achievements of planners and designers of the twentieth century. As such, it is vital reading for anyone concerned with the problem of rebuilding and revitalizing cities after disasters, either of a human or physical decimation. *Rebuilding Cities* covers and includes medieval nuclei to urban sprawl, physical, economic, and social factors in planning, and the changing nature of components of cities incorporating elements from different periods in a single visual scheme. Also included are analysis of planning schemes from Indian and Greek visionaries, legislative and administrative changes needed for successful planning, the massive redevelopment that happened in London after World War Two, renewal schemes, and urban design and work throughout the world. The remarkable clarity and thoroughness of the book and its abundant illustrations clearly demonstrate the successes and failures of planning schemes and lays a solid groundwork for intelligent assessment of the goals and practical possibilities of city planning. Teachers and students of planning and architecture professionals actively engaged in the field and all who visualize a truly civilized urban environment will find this book immensely helpful and satisfying.

A Modern History of European Cities Rosemary Wakeman, 2020-01-23 Rosemary Wakeman's original survey text comprehensively explores modern European urban history from 1815 to the present day. It provides a journey to cities and towns across the continent in search of the patterns of development that have shaped the urban landscape as indelibly European. The focus is on the built environment, the social and cultural transformations that mark the patterns of continuity and change, and the transition to modern urban society. Including over 60 images that serve to illuminate the analysis, the book examines whether there is a European city and if so, what are its characteristics. Wakeman offers an interdisciplinary approach that incorporates concepts from cultural and

postcolonial studies as well as urban geography and provides full coverage of urban society not only in western Europe but also in eastern and southern Europe using various cities and city types to inform the discussion The book provides detailed coverage of the often neglected urbanization post 1945 which allows us to more clearly understand the modernizing arc Europe has followed over the last two centuries

Rebuilding Urban Places After Disaster Eugenie L. Birch, Susan M. Wachter, 2013-01-09 Disasters natural ones such as hurricanes floods or earthquakes and unnatural ones such as terrorist attacks are part of the American experience in the twenty first century The challenges of preparing for these events withstanding their impact and rebuilding communities afterward require strategic responses from different levels of government in partnership with the private sector and in accordance with the public will Disasters have a disproportionate effect on urban places Dense by definition cities and their environs suffer great damage to their complex interdependent social environmental and economic systems Social and medical services collapse Long standing problems in educational access and quality become especially acute Local economies cease to function Cultural resources disappear The plight of New Orleans and several smaller Gulf Coast cities exemplifies this phenomenon This volume examines the rebuilding of cities and their environs after a disaster and focuses on four major issues making cities less vulnerable to disaster reestablishing economic viability responding to the permanent needs of the displaced and recreating a sense of place Success in these areas requires that priorities be set cooperatively and this goal poses significant challenges for rebuilding efforts in a democratic market based society Who sets priorities and how Can participatory decision making be organized under conditions requiring focused strategic choices How do issues of race and class intersect with these priorities Should the purpose of rebuilding be restoration or reformation Contributors address these and other questions related to environmental conditions economic imperatives social welfare concerns and issues of planning and design in light of the lessons to be drawn from Hurricane Katrina

Modernism and the Spirit of the City Iain Boyd Whyte, 2013-01-11 Modernism and the Spirit of the City offers a new reading of the architectural modernism that emerged and flourished in Europe in the first half of the twentieth century Rejecting the fashionable postmodernist arguments of the 1980s and 90s which damned modernist architecture as banal and monotonous this collection of essays by eminent scholars investigates the complex cultural social and religious imperatives that lay below the smooth white surfaces of new architecture

Boom Cities Otto Saumarez Smith, 2019-03-21 Boom Cities is the first published history of the profound transformations of British city centres in the 1960s It has often been said that urban planners did more damage to Britain's cities than even the Luftwaffe had managed and this study details the rise and fall of modernist urban planning revealing its origins and the dissolution of the cross party consensus before the ideological smearing that has ever since characterized the high rise towers dizzying ring roads and concrete precincts that were left behind The rebuilding of British city centres during the 1960s drastically affected the built form of urban Britain including places ranging from traditional cathedral cities through to the decaying towns of the industrial revolution Boom Cities

uncovers both the planning philosophy and the political cultural and legislative background that created the conditions for these processes to occur across the country Boom Cities reveals the role of architect planners in these transformations The volume also provides an unconventional account of the end of modernist approaches to the built environment showing it from the perspective of planning and policy elites rather than through the emergence of public opposition to planning *Building the Post-war World* Nicholas Bullock,2002 Building the Post War World offers for the first time an overall account of Modern Architecture in the decade after the Second World War
