Recent Advances in Mechanics and Fluid-Structure Interaction with Applications Fernando Carapau, Ashwin Vaidya, 2022-11-28 This volume examines current research in mechanics and its applications to various disciplines with a particular focus on fluid structure interaction FSI The topics have been chosen in commemoration of Dr Bong Jae Chung and with respect to his wide range of research interests This volume stands apart because of this diversity of interests featuring an interdisciplinary and in depth analysis of FSI that is difficult to find conveniently collected elsewhere in the literature Contributors include mathematicians physicists mechanical and biomechanical engineers and psychologists This volume is structured into four thematic areas in order to increase its accessibility theory computations experiments and applications *Recent Advances in Mechanics and Fluid Structure Interaction with Applications* will appeal to established researchers as well as postdocs and graduate students interested in this active area of research

Recent Advances in Computational Fluid Dynamics C.C. Chao, Steven A. Orszag, W. Shyy, 2013-03-07 From the preface Fluid dynamics is an excellent example of how recent advances in computational tools and techniques permit the rapid advance of basic and applied science The development of computational fluid dynamics CFD has opened new areas of research and has significantly supplemented information available from experimental measurements Scientific computing is directly responsible for such recent developments as the secondary instability theory of transition to turbulence dynamical systems analyses of routes to chaos ideas on the geometry of turbulence direct simulations of turbulence three dimensional full aircraft flow analyses and so on We believe that CFD has already achieved a status in the tool kit of fluid mechanicians equal to that of the classical scientific
