Encyclopedia of Modern Coral Reefs David Hopley, 2010-11-26 Coral reefs are the largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology geography and ecology providing comprehensive access to the most up to date research on the structure form and processes operating on Quaternary coral reefs

Recent Hurricane Research Anthony Lupo, 2011-04-19 This book represents recent research on tropical cyclones and their impact and a wide range of topics are covered An updated global climatology is presented including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long term trends in their occurrence Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity while other research discusses the impact climate change may have on these storms The dynamics and structure of tropical cyclones are studied with traditional diagnostics employed to examine these as well as more modern approaches in examining their thermodynamics The book aptly demonstrates how new research into short range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements In looking at societal and ecological risks and damage assessment authors investigate the use of technology for anticipating and later evaluating the amount of damage that is done to human society watersheds and forests by land falling storms The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas including medical facilities These studies provide decision makers with a potential basis for developing improved evacuation

techniques **Tourism, Consumption and Representation** Kevin Meethan, Alison Anderson, Steven Miles, 2006 This book addresses the practices of consumption in tourism a major theme in the sociology of tourism To date most tourism analysis has tended to concentrate on the production of tourist space and assume that tourism consumption simply mirrors the intentions of the producers By focussing on a number of relevant sub themes such as age gender religion and sexual orientation the chapters within this book critically examine such assumptions in terms of the interplay between the production and consumption of tourist spaces and how patterns of tourism consumption are negotiated on an individual level

of the last great frontiers in marine science accounting for 45% of the total ocean depth range Despite very little research effort since the 1950s the last ten years has seen a renaissance in hadal exploration almost certainly as a result of technological advances that have made this otherwise largely inaccessible frontier a viable subject for research Providing an overview of the geology involved in trench formation the hydrography and food supply this book details all that is currently known about organisms at hadal depths and linkages to the better known abyssal and bathyal depths New insights on how where and what really survives and thrives in the deepest biozone are provided allowing this region to be considered when

Oceanography H.W.A. Behrens,J.C. Borst,J.P. van der Meulen,L.J. Droppert,J.H. Stel,1997-12-12 GOOS is an international
 programme for a permanent global framework of observations modelling and analysis of ocean variables which are needed to
 support operational services around the world The EuroGOOS strategy has two streams the first is to improve the quality of
 marine information in European home waters and the second is to collaborate with similar organisations in other continents
 to create a new global ocean observing and modelling system that will provide the open ocean forecasts needed to achieve
 the best possible performance by local marine information services everywhere The EuroGOOS strategy envisages our
 national agencies making a major contribution to that challenging task of globalizing ocean forecasting The conference also
 provided an opportunity to take stock of the state of marine science and technology in Europe relevant to the EuroGOOS
 strategy and the state of information services and customer needs
