

The background of the cover features a large, faint, light-blue geometric diagram. It consists of a circle with several lines intersecting at its center and extending towards its circumference. Some of these lines have arrows pointing outwards. In the upper-left quadrant, a portion of this circle is shaded in a darker blue. In the lower-right quadrant, there is a smaller, more detailed version of this geometric diagram, also with a shaded segment and arrows.

Artificial Intelligence and Symbolic Mathematical Computing Jacques Calmet, John A. Campbell, 1993-10-05 This volume contains the papers updated in some cases presented at the first AISMC

Artificial Intelligence and Symbolic Mathematical Computations conference held in Karlsruhe August 3 6 1992 This was the first conference to be devoted to such a topic after a long period when SMC made no appearance in AI conferences though it used to be welcome in the early days of AI Some conferences were held recently on mathematics and AI but none was directly comparable in scope to this conference Because of the novelty of the domain authors were given longer allocations of time than usual in which to present their work As a result extended and fruitful discussions followed each paper The introductory chapter in this book which was not presented during the conference reflects in many ways the flavor of these discussions and aims to set out the framework for future activities in this domain of research In addition to the introduction the volume contains 20 papers

Recent Advances in Artificial Intelligence Research and Development Jordi Vitrià, Petia Radeva, Isabel Aguiló, 2004 Artificial Intelligence AI is a scientific field of longstanding tradition with origins in the early years of computer science Today AI has reached a level of maturity that allows us to build highly sophisticated systems which perform very different tasks Nevertheless its evolution has opened up a number of new problems ranging from specific algorithms to system integration which remain elusive and assure a long life for this research field Research progress in this area is today an international challenge that must be supported by world class meetings and organizations but in spite of this fact there is also an objective need for meetings and organizations that support and disseminate research at other levels This book focuses on new and original research on Artificial Intelligence

PRICAI '96: Topics in Artificial Intelligence Norman Foo, Randy Goebel, 1996 This volume constitutes the refereed proceedings of the 4th Pacific Rim International Conference on Artificial Intelligence PRICAI 96 held in Cairns Queensland Australia in August 1996 The 56 revised full papers included in the book were carefully selected for presentation at the conference from a total of 175 submissions The topics covered are machine learning interactive systems knowledge representation reasoning about change neural nets and uncertainty natural language constraint satisfaction and optimization qualitative reasoning automated deduction nonmonotonic reasoning intelligent agents planning and pattern recognition

Computational Discovery of Scientific Knowledge Saso Dzeroski, Ljupco Todorovski, 2007-08-07 This survey provides an introduction to computational approaches to the discovery of communicable scientific knowledge and details recent advances It is partly inspired by the contributions of the International Symposium on Computational Discovery of Communicable Knowledge held in Stanford CA USA in March 2001 a number of additional invited contributions provide coverage of recent research in computational discovery

Spatial and Temporal Reasoning O. Stock, 2007-07-27 Qualitative reasoning about space and time a reasoning at the human level promises to become a fundamental aspect of future systems that will accompany us in daily activity The aim of Spatial and Temporal Reasoning is to give a picture of current research in this area focusing on both representational and computational issues The picture emphasizes some major lines of development in this multifaceted constantly growing area The material in the book also shows some common ground and a novel combination of spatial and

temporal aspects of qualitative reasoning Part I presents the overall scene The chapter by Laure Vieu is on the state of the art in spatial representation and reasoning and that by Alfonso Gerevini gives a similar survey on research in temporal reasoning The specific contributions to these areas are then grouped in the two main parts In Part II Roberto Casati and Achille Varzi examine the ontological status of spatial entities Anthony Cohn Brandon Bennett John Gooday and Nicholas Gotts present a detailed theory of reasoning with qualitative relations about regions Andrew Frank discusses the spatial needs of geographical information systems and Annette Herskovits focuses on the linguistic expression of spatial relations In Part III James Allen and George Ferguson describe an interval temporal logic for the representation of actions and events Drew McDermott presents an efficient way of predicting the outcome of plan execution and Erik Sandewall introduces a semantics based on transitions for assessing theories of action and change In Part IV Antony Galton's chapter stands clearly between the two areas of space and time and outlines the main coordinates of an integrated approach

Thermodynamic Optimization of Complex Energy Systems Adrian Bejan, Eden Mamut, 2012-12-06 A comprehensive assessment of the methodologies of thermodynamic optimization exergy analysis and thermoeconomics and their application to the design of efficient and environmentally sound energy systems The chapters are organized in a sequence that begins with pure thermodynamics and progresses towards the blending of thermodynamics with other disciplines such as heat transfer and cost accounting Three methods of analysis stand out entropy generation minimization exergy or availability analysis and thermoeconomics The book reviews current directions in a field that is both extremely important and intellectually alive Additionally new directions for research on thermodynamics and optimization are revealed

Artificial Intelligence in Real-Time Control 1992 M.G. Rodd, H.B. Verbruggen, 2014-06-28 The symposium had two main aims to investigate the state of the art in the application of artificial intelligence techniques in real time control and to bring together control system specialists artificial intelligence specialists and end users Many professional engineers working in industry feel that the gap between theory and practice in applying control and systems theory is widening despite efforts to develop control algorithms Papers presented at the meeting ranged from the theoretical aspects to the practical applications of artificial intelligence in real time control Themes were the methodology of artificial intelligence techniques in control engineering the application of artificial intelligence techniques in different areas of control and hardware and software requirements This symposium showed that there exist alternative possibilities for control based on artificial intelligence techniques

Qualitative Reasoning Hannes Werthner,2012-12-06 The book provides a survey about the field of Qualitative Reasoning it contrasts and classifies its approaches and puts them into a common framework Qualitative Reasoning represents an approach of Artificial Intelligence to model dynamic systems about which little information is available and to derive statements about the potential behavior of these systems putting emphasis on a causal explanation of the behavior Both variables and relationships between variables are described by means of qualitative terms such as small and large or positive and negative Since this approach also takes into consideration the way how humans reason about physical systems it can be stated that Qualitative Reasoning participates in the creation of a cognitive theory of non numerical process descriptions which can be mapped onto a digital computer This approach can be used for simulation diagnosis design structure identification and interpretation Areas of application are physics medicine the field of ecology process control etc In addition to the classification of existing methods the book presents a new approach based on fuzzy sets And the work relates Qualitative Reasoning with such fields of Expert Systems System Theory and Cognitive Science **Artificial Intelligence**
