Receptor Purification Procedures J. Craig Venter, Len C. Harrison, 1984-01-01 **Receptor Biochemistry and Methodology**, 1988 *Amino Acids, Peptides and Proteins* J H Jones, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume **The Human Genome Project** United States. Congress. House. Committee on Science. Subcommittee on Energy and Environment, 2001 *Regulation of G Protein Coupled Receptor Function and Expression* Jeffrey L. Benovic, 1999-11-12 Recent advances in molecular and cell biology enabling the cloning expression and mutagenesis of signal transduction proteins has prompted an explosion of knowledge in the field of receptor regulation facilitating the discovery of new classes of regulatory proteins and providing a basis and means for manipulating receptor function through multiple intracellular targets This volume covers methods used to examine how the functions of receptors are regulated Understanding how to regulate the function and expression of these receptors is critical in determining how to modify receptors and to translocating receptors away from the cell surface and its recycling Individual chapters focus on specific techniques used to characterize receptors epitope tagging measurement and analysis of receptor phosphorylation analysis of the kinetics of receptor desensitization and assessment of receptor G protein coupling the role of regulatory proteins receptor kinases and phosphatases arrestins in modulating receptor function and the methods used to measure receptor trafficking ligand binding immunofluorescence and expression transcriptional and translational regulation Covers a broad range of important concepts and methodologies which are current in the study of G protein coupled receptors GPCRs G protein coupled receptors make up over 40% of the current pharmacological targets Provides detailed protocols for executing various strategies and offers informed judgments as to what approaches are and aren't useful Volume Editor Jeffrey Benovic is a dominant world leader in the study of receptor regulation of GPCR kinases and is highly respected in the field **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), **Ion Channel**

Reconstitution C. Miller, 2013-11-09 It is now over 30 years since the idea of ion conducting pores burst on the electrophysiological scene 15 years since these were generally realized to be membrane spanning proteins and 10 years since the first observations of single ion channels from higher organisms were made During the past 5 years several integral membrane channel proteins have been purified in a functionally competent state the nicotinic acetylcholine receptor the Na channel mitochondrial VDAC and a variety of porins The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades isolation followed by functional analysis in as simple a system as possible with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure This is always a daunting task all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins In this volume which can be considered a biochemically slanted companion to Sakmann and Neher's *Single Channel Recording* I have tried to present a view of the current landscape of ion channel reconstitution These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but as importantly the varied motivations for doing this kind of work

Steroid Receptor Methods Benjamin A. Lieberman, 2001-08-10 A distinguished team of principal investigators and their associates describe in step by step detail a cross section of the latest research techniques available for studying the endocrine system As a basis for sophisticated biochemical analysis of receptor properties the contributors provide methods for the production and purification of a variety of receptors including progesterone glucocorticoid and androgen Other protocols allow the reader to experiment with DNA binding characteristics hormone binding assays and the use of combinatorial chemistry for drug discovery A series of novel methods utilizing the latest advances in immunochemistry yeast two hybrid screening and fluorescence are included for the detection and analysis of a variety of cellular proteins that influence steroid receptor effectiveness

Immunoassay Bozzano G Luisa, 2012-12-02 During the last few years immunoassay has gained tremendous popularity in clinical and research laboratories and has been applied to determine hormone enzyme protein drug and infectious agents The aim of this book is to provide clinical laboratory personnel and students with an understanding of the principle of immunoassay and the production of reagents for immunoassay

Immunological Methods Ivan Lefkovits, Benvenuto Pernis, 2014-05-12 *Immunological Methods Volume IV* provides information pertinent to the methods in immunological research This book focuses on cells clones and cell lines as well as on their components and secreted products Organized into 21 chapters this volume begins with an overview of hybridoma methodology as the most celebrated immunological method This text then discusses cell fusion hybridoma technology and everything related to monoclonal antibodies Other chapters consider another molecular biology method which describes the procedure required for establishing a partitioned cDNA library This book provides as well a comprehensive analysis of mRNA

populations in which every messenger species appears as a distinct element and so provides accurate answers to questions concerning genetic complexity The final chapter provides an example of how transgenic mice can be used to study the development of T cell repertoires This book is a valuable resource for cell biologists scientists immunologists and research workers

The Lectins Irvin Liener, 2012-12-02 The Lectins Properties Functions and Applications in Biology and Medicine is a 10 chapter text that deals with the advances in research studies on the properties functions and applications of lectins in biology and medicine The first two chapters consider the historical development physicochemical properties isolation and remarkable specificity toward sugars of lectins These topics are followed by a discussion on the molecular aspects of protein evolution with a particular emphasis on lectins which provide an excellent example of a family of homologous proteins The following chapters explore the diverse biological activities of lectins and how these properties are utilized for the isolation and characterization of carbohydrate containing compounds in solution and on cells A chapter focuses on the functions of lectins in their natural milieu This text further covers the importance of lectins in nonplant systems as exemplified by lectins that occur in vertebrates slime molds and bacteria The last chapter highlights the nutritional significance of the occurrence of lectins in plant foods such as legumes This book is an ideal source for organic chemists protein researchers and workers in the fields of biology and medicine

Receptor Purification Gerald Litwack, 2012-12-06 The purpose of these volumes is to provide a reference work for the methods of purifying many of the receptors we know about This becomes increasingly important as full length receptors are overexpressed in bacteria or in insect cell systems A major problem for abundantly expressed proteins will be their purification In addition to purification protocols many other details can be found concerning an individual receptor that may not be available in standard texts or monographs No book of this type is available as a compendium of purification procedures Receptor Purification provides protocols for the purification of a wide variety of receptors These include receptors that bind neurotransmitters polypeptide hormones steroid hormones and ligands for related members of the steroid supergene family and others including receptors involved in bacterial motion The text of this information is substantial so as to require its publication in two volumes Consequently a division was made by grouping receptors by the nature of their ligands Thus in Volume One there are contributions on serotonin receptors adrenergic receptors the purification of GTP binding proteins opioid receptors neurotensin receptor luteinizing hormone receptor human chorionic gonadotropin receptor follicle stimulating hormone receptor thyrotropin receptor prolactin receptor epidermal growth factor receptor platelet derived growth factor receptor colony stimulating factor receptor insulin like growth factor receptors insulin receptor fibronectin receptor interferon receptor and the cholecystokinin receptor
