Receptors And Recognition The Specificity And Action Of Animal Bacterial And Plant Toxins:

The Specificity and Action of Animal, Bacterial and Plant Toxins Pedro Cuatrecasas, 2013-12-17 **The Specificity and Action of Animal, Bacterial and Plant Toxins** Cuatrecasas P., 1977 **Selectivity and Molecular Mechanisms of Toxicity** Francesco De Matteis, Edward A. Lock, 1987-06-18 **Handbook of Toxinology** W. T. Shier, 2020-08-26 Organized primarily around the mechanisms of action of the toxins at the biochemical physiological and pathological level rather than by source the handbook covers most toxins which have been clearly identified and characterized but emphasizes toxins that are more important by virtue of the sign **The Receptors** P. Michael Conn, 2014-05-10 The Receptors Volume III deals with receptors for interferons hormones and growth factors as well as for aminobutyric acid tuftsin somatomedin and insulin Prolactin and nicotine receptors are also considered along with the protein tyrosine kinase activity of hormone and growth factor receptors Comprised of 12 chapters this volume begins with a detailed account of secretory component SC as a receptor for polymeric immunoglobulins and the importance of SC polymeric immunoglobulin A interactions in the mucosal immune system The discussion then turns to interferon receptors and what is known about the fate of interferons and their receptors after binding the use of muscimol in ligand binding studies aimed at characterizing aminobutyric acid receptors and the role of protease nexins in the interaction of proteases with cells and in the regulation of proteolytic activity in the interstitial fluid immediately surrounding cells Subsequent chapters focus on receptor regulation of phosphoinositides and calcium effects of phospholipid turnover on receptor function dynamics of tuftsin receptors and the structure function and regulation of somatomedin receptors The book also examines the internalization and intracellular processing of insulin receptors before concluding with an analysis of prolactin and nicotine receptors This monograph will be a valuable resource for students and practitioners in fields ranging from cell biology and biochemistry to physiology endocrinology and pharmacology **Handbook of Natural Toxins** M. Immunotoxins Arthur E. Frankel, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by

asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Techniques for the Analysis of Membrane Proteins C. Ragan, 2012-12-06 A preface should justify the existence of the book it precedes and this is invariably done in scientific texts by reference to the explosive growth of the field since the last such volume appeared In molecular biology most fields can be justifiably described as growing explosively as should be the case for a young and vigorous science but the study of membrane proteins stands out as one which has taken giant strides in the last few years Ignorance of the structure and function of membrane proteins at the molecular level

was certainly not due to lack of interest but rather was a result of lack of appropriate techniques. It has above all been the development of new experimental methods which has wrenched membrane biochemistry out of what Anthony Martonosi fetchingly called its romantic phase. Lots of ideas and few facts into an era when the determination of membrane protein structure and mechanism is a reasonable goal. Membrane proteins are generally classified as peripheral or integral. Peripheral proteins are relatively easily dissociated from membranes by mild treatments whence their study is essentially no different to that of soluble proteins. This book therefore concentrates on integral proteins which are strongly bound to the membrane by hydrophobic interactions with lipids. A crucial step in their study is of necessity the development of methods of solubilization and purification under non denaturing conditions.
