Bretherick's

Handbook of Reactive Chemical Hazards L. Bretherick, 2016-10-27 Bretherick's Handbook of Reactive Chemical Hazards Fourth Edition has been prepared and revised to give access to a wide and up to date selection of documented information to research students practicing chemists safety officers and others concerned with the safe handling and use of reactive chemicals This will allow ready assessment of the likely potential for reaction hazards which may be associated with an existing or proposed chemical compound or reaction system A secondary longer term purpose is to present the information in a way which will as far as possible bring out the causes of and interrelationships between apparently disconnected facts and incidents This handbook includes all information which had become available to the author by April 1989 on the reactivity hazards of individual elements or compounds either alone or in combination It begins with an introductory chapter that provides an overview of the complex subject of reactive chemical hazards drawing attention to the underlying principles and to some practical aspects of minimizing such hazards This is followed by two sections Section 1 provides detailed information on the hazardous properties of individual chemicals either alone or in combination with other compounds the entries in Section 2 are of two distinct types The first type of entry gives general information on the hazardous behavior of some recognizably discrete classes or groups of the 4 600 or so individual compounds for which details are given in Section 1 The second type of entry concerns reactive hazard topics techniques or incidents which have a common theme or pattern of behavior involving compounds of several different groups so that no common structural feature exists for the compounds involved

**Bretherick's Handbook of Reactive Chemical Hazards** Peter Urban, 2016-06-23 Bretherick is widely accepted as the reference work on reactive chemical hazards and is essential for all those working with chemicals It attempts to include every chemical for which documented information on reactive hazards has been found The text covers over 5000 elements and compounds and as many again of secondary entries involving two or more compounds One of its most valuable features is the extensive cross referencing throughout both sections which links similar compounds or incidents not obviously related The fifth edition has been completely updated and revised by the new Editor and contains documented information on hazards and appropriate references up to 1994 although the text still follows the format of previous editions Volume 1 is devoted to specific information on the stability of the listed compounds or the reactivity of mixtures of two or more of them under various circumstances Each compound is identified by an UPAC based name the CAS registry number its empirical formula and structure Each description of an incident or violent reaction gives reference to the original literature Each chemical is classified on the basis of similarities in structure or reactivity and these groups are listed alphabetically in Volume 2 The group entries contain a complete listing of all the compounds in Volume 1 assigned to that group to assist cross referral to similar compounds Volume 2 also contains hazard topic entries arranged alphabetically some with lists Appendices include a fire related data table for higher risk chemicals indexes of registry numbers and chemical names as well as reference abbreviations and a glossary
