Safeguards Systems Analysis With Applications To Nuclear Material Safeguards And Other Inspection Problems:

Safeguards Systems Analysis R. Avenhaus, 2013-06-29 Adequate verification is the key issue not only in today's arms control, arms limitation and disarmament regimes but also in less spectacular areas like auditing in economics or control of environmental pollution. Statistical methodologies and system analytical approaches are the tools developed over the past decades for quantifying those components of adequate verification which are quantifiable, i.e. numbers, inventories, mass transfers etc. together with their uncertainties. In his book *Safeguards Systems Analysis*, Professor Rudolf Avenhaus condenses the experience and expertise he has gained over the past 20 years when his work was mainly related to the development of the IAEA's system for safeguarding nuclear materials to system analytical studies at IIASA in the field of future energy requirements and their risks and to the application of statistical techniques to arms control. The result is a unified and up-to-date presentation and analysis of the quantitative aspects of safeguards systems and the application of the more important findings to practical problems. International Nuclear Material Safeguards by far the most advanced verification system in the field of arms limitation is used as the main field of application for the game theoretical analysis, material accountancy theory and the theory on verification of material accounting data developed in the first four chapters.

Safeguards systems analysis with applications to nuclear material safeguards and other inspection problems Rudolf Avenhaus, 1955 *International Control of Tritium for Nuclear Nonproliferation and Disarmament* Martin B.

Kalinowski, 2004-03-29 Tritium is used by all nuclear weapons states to increase the explosive yield of atomic bombs and to miniaturize them. However, this radioactive material has not yet been put under appropriate international control comparable to the nuclear safeguards applied for plutonium and uranium. It is a neglected material in efforts to control the spread and

Compliance Quantified Rudolf Avenhaus, Morton John Canty, 1996-05-30 A self-contained 1996 account of the game theory and statistics used in modelling compliance with international agreements Game Equilibrium Models IV Reinhard Selten, 2013-04-17 The four volumes of *Game Equilibrium Models* present applications of non-cooperative game theory. Problems of strategic interaction arising in biology, economics, political science and the social sciences in general are treated in 42 papers on a wide variety of subjects. Internationally known authors with backgrounds in various disciplines have contributed original research. The reader finds innovative modelling combined with advanced methods of analysis. The four volumes are the outcome of a research year at the Center for Interdisciplinary Studies of the University of Bielefeld. The close interaction of an international interdisciplinary group of researchers has produced an unusual collection of remarkable results of great interest for everybody who wants to be informed on the scope, potential and future direction of work in applied game theory. Volume IV, *Social and Political Interaction*, contains game equilibrium models focussing on social and political interaction within communities or states or between states, i.e. national and international social and political interaction. Specific aspects of those interactions are modelled as non-cooperative games and their equilibria are analysed.
