**Space Safety is No Accident** Tommaso Sgobba, Isabelle Rongier, 2015-06-04 Includes the proceedings from the 7th IAASS Conference Space Safety is No Accident held in Friedrichshafen Germany in October 2014 The 7th IAASS Conference Space Safety is No Accident is an invitation to reflect and exchange information on a number of topics in space safety and sustainability of national and international interest The conference is also a forum to promote mutual understanding trust and the widest possible international cooperation in such matters The once exclusive club of nations with autonomous sub orbital and orbital space access capabilities is becoming crowded with fresh and ambitious new entrants New commercial spaceports are starting operations and others are being built In the manned spaceflight arena a commercial market is becoming a tangible reality with suborbital spaceflights and government use of commercial services for cargo and crew transportation to orbit Besides the national ambitions in space the international cooperation both civil and commercial is also gaining momentum In the meantime robotic space exploration will accelerate and with it the need to internationally better regulate the usage of nuclear power sources Space bound systems and aviation traffic will share more and more a crowded airspace while aviation will increasingly rely on space based safety critical services Finally most nations own nowadays space assets mainly satellites of various kinds and purposes which are under the constant threat of collision with other spacecraft and with the ever increasing number of space debris Awareness is increasing internationally as solemnly declared since decades in space treaties that space is a mankind asset and that we all have the duty of caring for it Without proactive and courageous international initiatives to organize space we risk to negate access and use of space to future generations

*Safety is No Accident—From 'V' Bombers to Concorde* John R. W. Smith, 2020-07-19 A behind the scenes look at the aeronautical engineers who keep the skies safe Many are surprised to learn that flying is statistically the safest means of transportation Even less well known is the crucial role that flight test observers and engineers play in ensuring that level of safety In this book one of them recounts his experience as an aeronautical engineer working in partnership with test pilots painting a vivid portrait of his flight testing career from the 1960s to early 1980s at Avro and the UK's Civil Aviation Authority CAA During the author's time at Avro he flew on the development and certification test flights of the Avro 748 748MF Shackletons Nimrod and Handley Page Victor tanker In the CAA his role turned to regulation making flight test assessments of manufacturer's prototypes and production aircraft to check compliance with the CAA's flight safety requirements The scope ranged from single engine light aircraft to large civil transport aircraft It involved frequent visits to foreign manufacturers and also included his participation in the CAA's Concorde certification flight test program Advancements in the understanding of aerodynamics and an increasingly professional approach to risk management improved safety but flight testing still involves risk and several of the author's close friends and colleagues died in flight test accidents during this period It is because of the courage and expertise of such people that millions of flights now touch down

Safety has traditionally been defined as a condition where the number of adverse outcomes was as low as possible

**Safety I** From a Safety I perspective the purpose of safety management is to make sure that the number of accidents and incidents is kept as low as possible or as low as is reasonably practicable This means that safety management must start from the manifestations of the absence of safety and that paradoxically safety is measured by counting the number of cases where it fails rather than by the number of cases where it succeeds This unavoidably leads to a reactive approach based on responding to what goes wrong or what is identified as a risk as something that could go wrong Focusing on what goes right rather than on what goes wrong changes the definition of safety from avoiding that something goes wrong to ensuring that everything goes right More precisely

**Safety II** is the ability to succeed under varying conditions so that the number of intended and acceptable outcomes is as high as possible From a Safety II perspective the purpose of safety management is to ensure that as much as possible goes right in the sense that everyday work achieves its objectives This means that safety is managed by what it achieves successes things that go right and that likewise it is measured by counting the number of cases where things go right In order to do this safety management cannot only be reactive it must also be proactive But it must be proactive with regard to how actions succeed to everyday acceptable performance rather than with regard to how they can fail as traditional risk analysis does This book analyses and explains the principles behind both approaches and uses this to consider the past and future of safety management practices The analysis makes use of common examples and cases from domains such as aviation nuclear power production process management and health care The final chapters explain the theoret
