

- This inefficient management of water can lead to the twin problems of water logging and salinisation.
- When too much water flows over the land it can become waterlogged, and crops quickly rot and die.
- Salinisation occurs when the natural salts contained in irrigation water seep into the ground and build up in the soil, making it too salty (saline) to grow crops.

In the Indus valley in Pakistan, salinisation is a major problem for farmers. Hot temperatures cause the water in the soil to evaporate. As a result, the salts are left behind and ruin the farmland.

Salinisation Of Land And Water Resources
