Bioremediation of Salt Affected Soils: An Indian Perspective Sanjay Arora, Atul K. Singh, Y.P. Singh, 2017-03-31 This edited volume focuses on the characterization reclamation bioremediation and phytoremediation of salt affected soils and waterlogged sodic soils Innovative technologies in managing marginal salt affected lands merit immediate attention in the light of climate change and its impact on crop productivity and environment The decision making process related to reclamation and management of vast areas of salt affected soils encompasses consideration of economic viability environmental sustainability and social acceptability of different approaches The chapters in this book highlight the significant environmental and social impacts of different ameliorative techniques used to manage salt affected soils Readers will discover new knowledge on the distribution reactions changes in biochemical properties and microbial ecology of salt affected soils through case studies exploring Indian soils The contributions presented by experts shed new light on techniques such as the restoration of degraded lands by growing

halophyte plant species diversification of crops and introduction of microbes for remediation of salt infested soils and the use of fluorescent pseudomonads for enhancing crop yields

Global status of salt-affected soils FAO, 2024-12-10

Salt affected soils characterized by high soluble salts saline or exchangeable sodium sodic impact plant growth and occur globally especially in arid and coastal regions Salinization stems from natural causes e g climate change sea level rise and human actions e g poor irrigation practices excessive water use

FAO s Global Map of Salt Affected Soils reveals that over 1 381 million hectares 10 7 percent of global land are affected with Australia Argentina and Kazakhstan among the most impacted countries Increasing aridity and water demand amplify soil degradation risks particularly in developing regions Climate change and water scarcity threaten agricultural productivity with substantial crop yield losses observed in saline areas

Halophytes and salt tolerant crops provide a foundation for saline agriculture yet many salt affected soils remain unprotected and inadequately regulated

FAO s INSAS International Network of Salt Affected Soils underscores the need for updated data harmonized salinity measurements and sustainable management practices with enhanced training and policy frameworks

Mitigation strategies like improved drainage soil amendments and the cultivation of salt tolerant plants are recommended

Key recommendations include scaling sustainable practices investing in salt tolerant crop markets improving data collection and water quality monitoring conserving ecosystems and fostering cross sector collaboration

Such integrated efforts aim to boost food production and resilience in affected regions while protecting vital ecosystems

The course work for various degree programs are constantly revised and or new courses added so that the future teachers researches and planners are able to face the new emerging challenges

The environmental concerns of irrigated agriculture in the form of water logging and soil salinity are expanding and impacting food grains production

These challenges are commonly articulated at various forums

Thus reclamation management and crop production practices of waterlogged salt affected soils have been introduced as a subject in agricultural and agricultural engineering colleges

Since there is a general lack of a good textbook on this subject authors have attempted to fill this gap through the current publication titled Crop Production in Salt Affected Soils

It comprehensively deals with the fundamentals of land reclamation principles and crop production practices

It has been divided into 16 Chapters

The book begins with general introduction comprising of categorization of salt affected soils extent and distribution and nature and physical chemical and biological properties

Other chapters includes basic information on on farm land development hydrology irrigation practices

drainage methods leaching soil salinization chemical amendments and new innovative techniques including agronomic and cultural practices related to land reclamation Crop production practices for select cereal oil seeds sugar fiber and forage green manure crops grasses and forest plantations are also included Chapter sixteen covers the economic evaluation and social issues involved in land reclamation programs A Glossary of terms has been added for quick overview of the terms used in the book The textbook designed and developed for the undergraduate post graduate students of agricultural agricultural engineering has been profusely illustrated so that students are able to visualize the processes and phenomena being dealt with Besides serving as a text book it will prove to be a handy resource book to conduct specialized training programs on land reclamation We believe that the book will find its due place in the shelves of students and teachers field functionaries and college libraries of state agricultural universities and civil engineering colleges *Proceedings Indo-Hungarian Seminar Management of Salt Affected Soils* Darnal Indo-Hungarian Seminar Management of Salt Affected Soils (India, 1977),1978
