The U S Army has asked the National Research Council NRC to evaluate whether supercritical water oxidation SCWO is an effective and appropriate means of eliminating hazardous or toxic organic constituents in VX hydrolysate for ultimate disposition The NRC was not asked to conduct an in depth analysis of the entire integrated VX bulk agent destruction and disposal process for the Newport Chemical Agent Disposal Facility As the facility design is being finalized March 1999 April 2000 the NRC will probably be asked to assess all aspects of the facility design including monitoring containment process control and redundancy as well as the quantitative risk assessment QRA This report outlines the elements of the proposed neutralization SCWO technology evaluates the results of ongoing SCWO tests and makes recommendations concerning aspects of the technology that require further development The scope of this evaluation did not include evaluations of other potential technologies or management options for the treatment of VX hydrolysate **Boiler Operators Handbook** NIFES Ltd, 2012-12-06

The popularity of the Boiler Operators Handbook has prompted the issue of a revised edition Other than a relatively small number of developments essentially associated with solid fuel firing methods using the fluidised bed technique no radical changes have occurred since the first edition of the Handbook was issued in 1969 In revising a work of this kind there is a great temptation to omit practices that are now less common in the UK In view of the enormous pressure on Global energy resources however the chapters dealing in methods of hand firing have been retained in the hope that they may be of value to those in the less developed nations where energy problems are infinitely greater than ours High combustion intensity boilers commonly known as Package Boilers of the Shell Construction design have now much greater steam output than their predecessors and the need for high levels of maintenance and operating skills remain as essential as when this group of boilers first appeared on the market Also the standard of water treatment required is probably higher than the Operator has been accustomed to The Health and Safety at Work Act re emphasised the continued need for adherence to the principles that ensure a pressure vessel be maintained in a safe condition at all times Accordingly the revised edition of the Boiler Operators Handbook has enlarged its sections on Safety and the Clean Air Act

*Supercritical Water Processing Technologies for Environment, Energy and Nanomaterial Applications* Shuzhong Wang, Donghai Xu, Yang Guo, Xingying Tang, Yuzhen Wang, Jie Zhang, Honghe Ma, Lili Qian, Yanhui Li, 2019-09-18 This book systematically presents the technical aspects of supercritical water oxidation and supercritical water gasification for energy and environmental applications which include reactor design construction materials corrosion salt precipitation etc The book provides a comprehensive introduction to the properties of supercritical water and the industrial applications reaction mechanisms and reaction kinetics of supercritical water oxidation SCWO and supercritical water gasification SCWG The reactions occurring in supercritical water are complex and studying their reaction mechanisms is of great importance for the development of supercritical water processing technologies Accordingly the book explains the oxidative mechanisms and kinetics of organic matter in supercritical water in detail However the harsh reaction conditions in supercritical water can easily create severe reactor corrosion and salt deposition problems Therefore the book also comprehensively reports on the mechanism analysis state of research and development trends regarding these two problems Lastly the book summarizes the development of supercritical water processing technologies including studies on SCWO and SCWG as well as near zero emission systems of pollutants based on SCWO technology In short the book provides a wealth of valuable information for all readers who are interested in using SCWO for organic waste treatment and in using SCWG for hydrogen production with wet biomass
