fulfill almost every human need. That led societies to develop specific technologies to acquire, manage, transform, elaborate, use and consume these resources. The materials provided by woodlands covered a wide range of necessities such as food, shelter, clothing or tool production, but they also provided resources employed for waterproofing, dying, medicine and adhesives among many others. All these technological processes and uses are commonly difficult to identify through the archaeological record. Some materials are exclusively preserved by charring or in anaerobic conditions at very exceptional sites or leave only a very slight trace behind them e.g. containers. Consequently, they have received far less attention in archaeobotanical studies compared to other kinds of plant materials consumed as food or firewood. This book provides an overview of technological uses of plants from the Palaeolithic to the Post Medieval period. This collection of papers presents different archaeobotanical and archaeological studies dealing with the use of a wide range of woodland resources, most of them among the less visible for archaeology such as bast fibres and fungi. These papers present different approaches for their study combining archaeology, archaeobotany and ethnoarchaeology.

Natural History of Vampire Bats Arthur M. Greenhall, 2018-05-04 A major problem with vampire bats is that whatever information exists is scattered throughout the literature or is not recorded. There are some excellent books on the ecology and biology of bats with very little on vampire bats. This volume fills that gap to provide an in-depth presentation of these unique animals.

Revista nacional de cultura ,1973 Farmers at the Frontier Kurt J Gron,Lasse

Sørensen,Peter Rowley-Conwy,2020-02-15 All farming in prehistoric Europe ultimately came from elsewhere in one way or another unlike the growing numbers of primary centers of domestication and agricultural origins worldwide This fact affects every aspect of our understanding of the start of farming on the continent because it means that ultimately domesticated plants and animals came from somewhere else and from someone else In an area as vast as Europe the process by which food production becomes the predominant subsistence strategy is of course highly variable but in a sense the outcome is the same and has the potential for addressing more large scale questions regarding agricultural origins Therefore a detailed understanding of all aspects of farming in its absolute earliest form in various regions of Europe can potentially provide a new perspective on the mechanisms by which this monumental change comes to human societies and regions In this volume we aim to collect various perspectives regarding the earliest farming from across Europe Methodological approaches archaeological cultures and geographic locations in Europe are variable but all papers engage with the simple question What was the earliest farming like This volume opens a conversation about agriculture just after the transition in order to address the role incoming people technologies and adaptations have in secondary adoptions The book starts with an introduction by the editors which will serve to contextualize the theme of the volume The broad arguments concerning the process of neolithisation are addressed and the rationale for the volume discussed Contributions are ordered geographically and chronologically given the progression of the Neolithic across Europe The editors conclude the volume with a short commentary paper regarding the theme of the volume
