Metalloporphyrins In Catalytic Oxidations:

Metalloporphyrins in Catalytic Oxidations Roger A. Sheldon, 1994-06-28 This volume provides an in depth overview of the chemistry of metalloporphyrins as oxidation catalysts in chemical and biological systems It discusses practical techniques for the synthesis of metalloporphyrins and introduces useful methods of immobilization to improve their synthetic utility Detailed discussions of underlying mechanistic features are provided *Metalloporphyrins Catalyzed Oxidations* F.

Montanari, L. Casella, 2013-11-11 Oxidative catalysis by metalloporphyrin systems occupies a prominent role in the current research in the fields of chemical and biological catalysis Our particular interest and approach has been to collect in the same volume papers dealing with both the chemical and biological aspects of the reactivity of heme systems because of the realization that a better understanding of the complementary discipline can be extremely useful for the researchers from either field The current progress of the research on synthetic metalloporphyrin catalysts has led to the development of several systems that are able to reproduce the heme enzyme mediated oxygenation and oxidation reactions at least in terms of reaction types mechanisms and often rates These achievements have stimulated the of creating metalloporphyrin catalysts which are both ambitious project efficient and stable enough to become competitive for large scale industrial processes Although this project is still far from being realized the efforts in this direction parallel those aimed at the application of heme enzymes to chemical technologies e g for the mild selective oxidation of organics or the detoxification of pollutants Both the two approaches will be advantageous because while the enzyme systems can achieve selectivities which are probably unattainable by synthetic catalysts the latter can be active under experimental conditions that would readily inactivate the enzymes **Catalytic Oxidations with Hydrogen Peroxide as Oxidant** G. Strukul, 2013-03-14 Hydrogen

peroxide is a chemical that is becoming increasingly fashionable as an oxidant both in industry and in academia and whose production is expected to increase significantly in the next few years This growth in interest is largely due to environmental considerations related to the clean nature of hydrogen peroxide as an oxidant its by product being only water To date this chemical has largely been employed as a non selective oxidant in operations like the bleaching of paper cellulose and textiles or in the formulation of detergents and only to a minimal extent in the manufacture of organic chemicals This book has been organized to cover the different aspects of the chemistry of hydrogen peroxide The various chapters into which the book is divided have been written critically by the authors with the general aim of stimulating new ideas and emphasizing those aspects that are likely to lead to new developments in organic synthesis in the coming future **The Porphyrin Handbook,**

Meunier, 2003-09-04 The present volume is a description of the current knowledge on the different metal oxo and metal peroxo species which are involved in catalytic oxidations These highly reactivity metal oxygen species are the key intermediates in heme or non heme oxygenases as well as in metal catalyzed oxidations The accumulated knowledge on these reactive entities will facilitate a better understanding of the different intermediates involved in the catalytic cycles of enzymes like cytochromes P 450 non heme oxygenases copper oxygenases in the oxidation of water by the manganese center of Photosystem II in the chemistry of dioxiranes and also in DNA cleavage performed by activated bleomycin The description of these metal oxo and metal peroxo species is based on physico chemical data reactivity results and also on theoretical calculations *The Activation of Dioxygen and Homogeneous Catalytic Oxidation* D.H.R.

Barton, Arthur E. Martell, Donald T. Sawyer, 2012-12-06 This monograph consists of the proceedings of the Fifth International Symposium on the Activation of Dioxygen and Homogeneous Catalytic Oxidation held in College Station Texas March 14 19 1993 It contains an introductory chapter authored by Professors D H R Barton and D T Sawyer and twenty nine chapters describing presentations by the plenary lecturers and invited speakers One of the invited speakers who could not submit a manuscript for reasons beyond his control is represented by an abstract of his lecture Also included are abstracts of forty seven posters contributed by participants in the symposium Readers who may wish to know more about the subjects presented in abstract form are invited to communicate directly with the authors of the abstracts This is the fifth international symposium that has been held on this subject The first was hosted by the CNRS May 21 29 1979 in Bendor France on the Island of Bandol The second meeting was organized as a NATO workshop in Padova Italy June 24 27 1984 This was followed by a meeting in Tsukuba Japan July 12 16 1987 The fourth symposium was held at Balatonfured Hungary September 10 14 1990 The sixth meeting is scheduled to take place in Delft The Netherlands late Spring 1996 the organizer and host will be Professor R A Sheldon **Advances in Catalytic Activation of Dioxygen by Metal Complexes** László I.

Simándi, 2006-04-11 The subject of dioxygen activation and homogeneous catalytic oxidation by metal complexes has been in the focus of attention over the last 20 years The widespread interest is illustrated by its recurring presence among the sessions and subject areas of important international conferences on various aspects of bioinorganic and coordination chemistry as well as catalysis The most prominent examples are ICCC ICBIC EUROBIC ISHC and of course the ADHOC series of meetings focusing on the subject itself Similarly the number of original and review papers devoted to various aspects of dioxygen activation are on the rise This trend is due obviously to the relevance of catalytic oxidation to biological processes such as dioxygen transport and the action of oxygenase and oxidase enzymes related to metabolism The structural and functional modeling of metalloenzymes particularly of those containing iron and copper by means of low molecular complexes of iron copper ruthenium cobalt manganese etc have provided a wealth of indirect information helping to

understand how the active centers of metalloenzymes may operate The knowledge gained from the study of metalloenzyme models is also applicable in the design of transition metal complexes as catalysts for specific reactions This approach has come to be known as biomimetic or bioinspired catalysis and continues to be a fruitful and expanding area of research

Catalytic Activation of Dioxygen by Metal Complexes László I. Simándi, 2012-12-06 The activation of dioxygen by metal ions has both synthetic potential and biological relevance Dioxygen is the cleanest oxidant for use in emission free technologies to minimize pollution of the environment The book gives a survey of those catalyst systems based on metal complexes which have been discovered and studied in the last decade They activate molecular oxygen and effect the oxidation of various organic compounds under mild conditions Much of the recent progress is due to a search for biomimetic catalysts that would duplicate the action of metalloenzymes Mechanistic aspects are emphasized throughout the book An introductory chapter reviews the chemistry of transition metal dioxygen complexes which are usually the active intermediates in the catalytic reactions discussed Separate chapters are devoted to oxidation of saturated unsaturated and aromatic hydrocarbons phenols catechols oxo compounds phosphorus sulfur and nitrogen compounds
