Modelling And Analysis In Arms Control:

Modelling and Analysis in Arms Control Rudolf Avenhaus, Reiner K. Huber, John D. Kettelle, 2012-12-06 This book presents the results of an international workshop on Modelling and Analysis of Arms Control Problems held in Spitzingsee near Munich in October 1985 under the joint sponsorship of NATO's Scientific Affairs Division and the Volkswagen Foundation. The idea for this workshop evolved in 1983 as a consequence of discussions in the annual Systems Science Seminar at the Computer Science Department of the Federal Armed Forces University Munich on the topic of Quantitative Assessment in Arms Control. There was wide agreement among the contributors to that seminar and its participants that those efforts to assess the potential contributions of systems and decision sciences as well as systems analysis and mathematical modelling to arms control issues should be expanded and a forum should be provided for this activity. It was further agreed that such a forum should include political scientists and policy analysts working in the area of arms control.

Quantitative Assessment in Arms Control Rudolf Avenhaus, 2012-12-06 This book originates in a series of contributions to the 1983 Systems Science Seminar at the Computer Science Department of the German Armed Forces University Munich. Under the topic Quantitative Approaches to Arms Control that seminar attempted to review the present state of the art of systems analysis and numerical methods in arms control. To this end the editors invited a number of experts from Europe, the United States and Canada to share and discuss their views and assessments with the faculty and upper class computer science students of the university as well as numerous guests from the defence community and the interested public. In three parts this book presents a selection of partly revised and somewhat extended versions of the seminar presentations followed in most cases by brief summaries of the transcripts of the respective discussions. In addition to an introduction by the editors part I contains six papers on the present state and problems of arms control with emphasis on START Strategic Arms Reduction Talks, INF Intermediate range Nuclear Forces negotiations and MBFR Mutually Balanced Force Reduction talks. The seven contributions to part II are devoted to mathematical models of arms competition and quantitative approaches to force balance assessment of both the static and dynamic variety. Part III presents five papers which address technical and operational aspects and legal implications of arms control negotiations and verification.

The applications include empirical evidence. The following topics are covered: communication and correlated equilibria, coalitional games and coalition structures, utility and subjective probability, common knowledge, bargaining, zero sum games, differential games and applications of game theory to signalling, moral hazard, search, evolutionary biology, international relations, voting procedures, social choice, public economics, politics.
