My Life Twenty Japanese Women Scientists:

MY LIFE Yoshihide Kozai, 2001-06 20 *Japanese Education* Roberta E. Pike, 2007 Presents a large representative sample of the literature on Japanese education with an emphasis on its psychosocial aspects Many discussions compare the Japanese educational system with that of the United States and other countries The citations cover most of the 1990s including a few earlier and later references Includes extensive discussions about Japanese educational reform movements and their consequences Also cites published and unpublished dissertations and theses Updates the last comprehensive English language bibliography on Japanese education published by Ulrich Teichler in 1974 The citations were taken from many online databases Suitable for students teachers scholars and the general public **A Companion to the**

Anthropology of Japan Jennifer Robertson, 2008-04-15 This book is an unprecedented collection of 29 original essays by some of the world's most distinguished scholars of Japan Covers a broad range of issues including the colonial roots of anthropology in the Japanese academy eugenics and nation building majority and minority cultures genders and sexualities and fashion and food cultures Resists stale and misleading stereotypes by presenting new perspectives on Japanese culture and society Makes Japanese society accessible to readers unfamiliar with the country *A to Z of Biologists* Lisa

Yount, 2014-05-14 Profiles more than 150 scientists from around the world who made important contributions to the field of biology including Claude Bernard Alexander Fleming Mary Claire King Ronald Ross and Tetsuko Takabe **A History of Women in Astronomy and Space Exploration** Dale DeBakcsy, 2023-05-31 For the last four hundred years women have played a part far in excess of their numerical representation in the history of astronomical research and discovery It was a woman who gave us our first tool for measuring the distances between stars and another who told us for the first time what those stars were made of It was women who first noticed the rhythmic noise of a pulsar the temperature discrepancy that announced the existence of white dwarf stars and the irregularities in galactic motion that informed us that the universe we see might be only a small part of the universe that exists And yet in spite of the magnitude of their achievements for centuries women were treated as essentially second class citizens within the astronomical community contained in back rooms forbidden from communicating with their male colleagues provided with repetitive and menial tasks and paid starvation wages This book tells the tale of how in spite of all those impediments women managed by sheer determination and genius to unlock the secrets of the night sky It is the story of some of science's most hallowed names Maria Mitchell Caroline Herschel Vera Rubin Nancy Grace Roman and Jocelyn Bell Burnell and also the story of scientists whose accomplishments were great but whose names have faded through lack of use Queen Seondeok of Korea who built an observatory in the 7th century that still stands today Wang Zhenyi who brought heliocentrism to China Margaret Huggins who perfected the techniques that allowed us to photograph stellar spectra and thereby completely changed the direction of modern astronomy and Hisako Koyama whose multi decade study of the sun's surface is as impressive a feat of steadfast

scientific dedication as it is a rigorous and valuable treasure trove of solar data *A History of Women in Astronomy and Space Exploration* is not only a book however of those who study space but of those who have ventured into it from the fabled Mercury 13 whose attempt to join the American space program was ultimately foiled by betrayal from within to mythical figures like Kathryn Sullivan and Sally Ride who were not only pioneering space explorers but scientific researchers and engineers in their own rights aided in their work by scientists like Mamta Patel Nagaraja who studied the effects of space upon the human body and computer programmers like Marianne Dyson whose simulations prepared astronauts for every possible catastrophe that can occur in space Told through over 130 stories spanning four thousand years of humanity's attempt to understand its place in the cosmos *A History of Women in Astronomy and Space Exploration* brings us at last the full tale of women's evolution from instrument makers and calculators to the theorists administrators and explorers who have while receiving astonishingly little in return given us quite literally the universe

A to Z of Biologists, Updated Edition Lisa Yount, 2019-10-01 Praise for the previous edition the coverage of women races and international history in general make it a good source for exploring the many faces of biologists American Reference Books Annual useful School Library Journal Recommended Choice *A to Z of Biologists Updated Edition* uses the device of biography to put a human face on science a method that adds immediacy for the high school student who might have an interest in pursuing a career in biology This comprehensive survey features more than 150 entries and 50 black and white photographs Each profile focuses on a biologist's research and contributions to the field and their effect on scientists whose work followed Their lives and personalities are also discussed through incidents quotations and photographs The profiles are culturally inclusive and span a range of biologists from ancient times to the present day The entries on women and minority biologists especially articulate the obstacles that these biologists overcame in the process of reaching their goals This title is an ideal resource for students and general readers interested in the history of biology or the personal and professional lives of significant biologists People covered include Rachel Louise Carson 1907 1964 Paul Ehrlich 1854 1915 Dian Fossey 1932 1985 Galen c 130 c 201 Alexander von Humboldt 1769 1859 Shibasaburo Kitasato 1852 1931 Severo Ochoa 1905 1993 Linus Carl Pauling 1901 1994 Rosalyn Sussman Yalow 1921 2011 Lap Chee Tsui 1950 present Pamela Silver 1952 present

Asian Scientists on the Move Anju Mary Paul, 2021-12-09 The growing scientific research output from Asia has been making headlines since the start of the twenty first century But behind this science story there is a migration story The elite scientists who are pursuing cutting edge research in Asia are rarely homegrown talent but were typically born in Asia trained in the West and then returned to work in Asia *Asian Scientists on the Move* explores why more and more Asian scientists are choosing to return to Asia and what happens after their return when these scientists set up labs in Asia and start training the next generation of Asian scientists Drawing on evocative firsthand accounts from 119 Western trained Asian scientists about their migration decisions and experiences and in depth analysis of the scientific field in four country case studies China India Singapore and Taiwan

the book reveals the growing complexity of the Asian scientist migration system **American Book Publishing Record**, 2002 **Japanese Science** Samuel Coleman, 1999-09-09 This ethnographic study of Japan's scientists looks firsthand at career structures and organizational issues that have hampered the advancement of scientists and scientific research in Japan It provides analysis of the problem of career mobility in science the status quo in university and government laboratories relations between scientists and **Bulletin of the Atomic Scientists**, 1970-06 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world
