Npg Germanys Uncertain Power:

A national plan for energy research, development, and demonstration United States. Energy Research and Development Administration,1976 *Power, Discrimination, and Privilege in Individuals and Institutions* Sonya Faber,Monnica T. Williams,Matthew D. Skinta,Bia Labate,2024-04-01 Individuals and systems are rife with prejudices leading to discrimination and inequities Examples of this include rejection of stigmatized groups e g Black Americans Indigenous people in Canada Roma peoples in Europe structural racism e g inequitable distribution of resources for public schools disenfranchisement of women employees e g the glass ceiling barriers to higher education e g biased admissions requirements heterosexism economic oppression and colonization When we take a closer look we find the core of the problem is imbalance in the distribution of power and its misuse A National Plan for Energy Research, Development & Demonstration: The plan United States. Energy Research and Development Administration,1976 *Atomic Assurance* Alexander Lanoszka,2018-11-15 Do alliances curb efforts by states to develop nuclear weapons Atomic Assurance looks at what makes alliances sufficiently credible to prevent nuclear proliferation how alliances can break down and so encourage nuclear proliferation and whether security guarantors like the United States can use alliance ties to end the nuclear efforts of their allies Alexander Lanoszka finds that military alliances are less useful in preventing allies from acquiring nuclear weapons than conventional wisdom suggests Through intensive case studies of West Germany Japan and South Korea as well as a series of smaller cases on Great Britain France Norway Australia and Taiwan Atomic Assurance shows that it is easier to prevent an ally from initiating a nuclear program than to stop an ally that has already started one in theater conventional forces are crucial in making American nuclear guarantees credible the American coercion of allies who started or were tempted to start a nuclear weapons program has played less of a role in forestalling nuclear proliferation than analysts have assumed and the economic or technological reliance of a security dependent ally on the United States works better to reverse or to halt that ally s nuclear bid than anything else Crossing diplomatic history international relations foreign policy grand strategy and nuclear strategy Lanoszka s book reworks our understanding of the power and importance of alliances in stopping nuclear proliferation A National Plan for Energy Research, Development & Demonstration United States. Energy Research and Development Administration,1975 **Oversight Hearings, Near Term Energy R. & D.** United States. Congress. House. Committee on Science and Technology. Subcommittee on Energy Research, Development, and Demonstration (Fossil Fuels),1975 *Technology Neutrality in Energy Tax* United States. Congress. Senate. Committee on Finance,2009 *Maximum Entropy and Bayesian Methods* Garching, Germany 1998 Wolfgang von der Linden,Volker Dose,Rainer Fischer,Roland Preuss,2012-12-06 In 1978 Edwin T Jaynes and Myron Tribus initiated a series of workshops to exchange ideas and recent developments in technical aspects and applications of Bayesian probability theory The first workshop was held at the University of Wyoming in 1981 organized by C R Smith and W T Grandy Due to its success the

workshop was held annually during the last 18 years Over the years the emphasis of the workshop shifted gradually from fundamental concepts of Bayesian probability theory to increasingly realistic and challenging applications The 18th international workshop on Maximum Entropy and Bayesian Methods was held in Garching Munich Germany 27-31 July 1998 Opening lectures by G Larry Bretthorst and by Myron Tribus were dedicated to one of the pioneers of Bayesian probability theory who died on the 30 of April 1998 Edwin Thompson Jaynes Jaynes revealed and advocated the correct meaning of probability as the state of knowledge rather than a physical property This interpretation allowed him to unravel longstanding mysteries and paradoxes Bayesian probability theory the logic of science as E T Jaynes called it provides the framework to make the best possible scientific inference given all available experimental and theoretical information We gratefully acknowledge the efforts of Tribus and Bretthorst in commemorating the outstanding contributions of E T Jaynes to the development of probability theory High Energy Physics, 1981 **The Kaiser Wilhelm Society Under National Socialism** Susanne Heim, Carola Sachse, Mark Walker, 2009-04-27 This book examines the Kaiser Wilhelm Institutes under Hitler illustrating the cooperation between scientists and National Socialists in service of autarky racial hygiene war and genocide *European North Sea Energy Alliance ("ENSEA") FP7-2012-2013-1: 320024* Hans-Peter Beck, Knut Kappenberg, 2017-03-22 Die Europäische Nordsee Energie Allianz ENSEA ist ein von der Europäischen Kommission gefördertes Projekt welches im Rahmen des FP7 Programms Kapazitäten Wissensregionen zwischen dem 01.10.2012 und dem 31.12.2015 durchgeführt wurde Hauptziel ist der gezielte Aufbau internationaler Kooperationen zwischen Wissenschaft Wirtschaft und öffentlicher Verwaltung in regionalen Energiesektoren Triple Helix Ansatz und die Entwicklung von Wissen über Energiesystemintegration innerhalb internationaler Regionen Partner des ENSEA Verbundes sind die nördlichen Niederlande der Nordwesten Deutschlands der Südwesten Norwegens und Schottland Die Vereinigung und Analyse der Innovationskapazitäten der Partnerregionen die Zusammenführung bestehenden Energie Know-hows die Abstimmung von regionalen nationalen und europäischen Forschungsprogrammen sowie die Verstärkung der Zusammenarbeit sind die wichtigsten Ergebnisse der in dieser Schriftenreihe vorgestellten Aktivitäten Ergänzend wird ein Maßnahmenkatalog für die Politikentwicklung vorgestellt welcher im Rahmen der ENSEA Abschlusskonferenz in Edinburgh erarbeitet wurde ENSEA leistet damit einen signifikanten Beitrag zur Integration erneuerbarer Energien der Nordsee in das bestehende Onshore Energiesystem Economic Titles/abstracts, 1991 **The History and Science of the Manhattan Project** Bruce Cameron Reed, 2019-02-19 The development of atomic bombs under the auspices of the U.S. Army's Manhattan Project during World War II is considered to be the outstanding news story of the twentieth century In this book a physicist and expert on the history of the Project presents a comprehensive overview of this momentous achievement The first three chapters cover the history of nuclear physics from the discovery of radioactivity to the discovery of fission and would be ideal for instructors of a sophomore level Modern Physics course Student level exercises at the ends of the chapters are accompanied by answers

Chapter 7 covers the physics of first generation fission weapons at a similar level again accompanied by exercises and answers For the interested layman and for non science students and instructors the book includes extensive qualitative material on the history organization implementation and results of the Manhattan Project and the Hiroshima and Nagasaki bombing missions The reader also learns about the legacy of the Project as reflected in the current world stockpiles of nuclear weapons This second edition contains important revisions and additions including a new chapter on the German atomic bomb program and new sections on British and Canadian contributions to the Manhattan project and on feed materials Several other sections have been expanded reader feedback has been helpful in introducing minor corrections and improved explanations and last but not least the second edition includes a detailed index U.S. Power Reactors ,1964

The Political Economy of Electricity Mark Cooper,2017-04-24 Providing critical insights that will interest readers ranging from economists to environmentalists policymakers and politicians this book analyzes the economics and technology trends involved in the dilemma of decarbonization and addresses why aggressive policy is required in a capitalist political economy to create a sea change away from fossil fuels The environmental damage across the globe is a result of the success of capitalist industrialism 250 years of carbon pollution resulting from consumption of fossil fuels to drive the economy and the worldwide aspiration to ever increasing levels of economic development But capitalism has also produced the tools to solve the problems it has created in the form of a technological revolution in low carbon renewables distributed resources and intelligent systems to integrate supply and demand This book comprehensively examines the political economy of electricity and analyzes the challenge of transforming today s electricity sector to meet the dual goals of decarbonization and development expressed in the Paris Agreement Author Mark Cooper defines the dilemma of development and decarbonization as the great challenge facing the electricity industry and documents how the economic resources costs of a 100 percent renewable portfolio has declined to the point that decarbonization can pay for itself making the low carbon renewable technologies that enable desired environmental and public health benefits an easy sell He identifies the substantial benefit of increasing use of information communications and advanced control technologies shows how targeted innovation could speed the transition by a decade or two and lower the overall cost of the transition by as much as half and explains why the flexible multi stakeholder approach of the Paris Agreement is the correct approach **Energy Research**

Abstracts ,1987 *Britain and Germany in Europe, 1949-1990* Jeremy Noakes,Peter Wende,Jonathan Wright,2002 Anglo German relations since 1945 have been generally cordial but subject to bouts of acute tension This volume by leading historians from both countries examines major political issues and broader contacts between the two societies It suggests that British perceptions have remained coloured by fears of German dominance aggravated by the success of the Federal Republic and the relative decline of Britain in the post war period Heavy Water and the Wartime Race for Nuclear Energy Per F Dahl,2023-05-31 Heavy water deuterium oxide played a sinister role in the race for nuclear energy during the World

War II It was a key factor in Germany's bid to harness atomic energy primarily as a source of electric power its acute shortage was a factor in Japan's decision not to pursue seriously nuclear weaponry its very existence was a nagging thorn in the side of the Allied powers Books and films have dwelt on the Allies efforts to deny the Germans heavy water by military means however a history of heavy water has yet to be written Filling this gap Heavy Water and the Wartime Race for Nuclear Energy concentrates on the circumstances whereby Norway became the preeminent producer of heavy water and on the scientific role the rare isotope of hydrogen played in the wartime efforts by the Axis and Allied powers alike Instead of a purely technical treatise on heavy water the book describes the social history of the subject The book covers the discovery and early uses of deuterium before World War II and its large scale production by Norsk Hydro in Norway especially under German control It also discusses the French German race for the Norwegian heavy water stocks in 1940 and heavy water's importance for the subsequent German uranium project including the Allied sabotage and bombing of the Norwegian plants as well as its lesser role in Allied projects especially in the United States and Canada The book concludes with an overall assessment of the importance and the perceived importance of heavy water for the German program which alone staked everything on heavy water in its quest for a nuclear chain reaction Germany and Nuclear Weapons in the 21st Century

Ulrich Kühn, 2024-03-12 This book is the first scholarly book to take a comprehensive look at Germany's nuclear weapons policies in the 21st century German foreign and security policy is facing a profound reorientation Great power competition between the United States and both a revanchist Russia and a rising China the return of war and nuclear threats to Europe and the emergence of new technologies all force Germany to adapt German policymakers and scholars increasingly speak of a pivotal Zeitenwende an epochal turning point in history How does Germany adapt its nuclear policies to these changing conditions The volume brings together internationally renowned nuclear scholars and policy analysts from Germany and abroad Focussing on German nuclear deterrence arms control and disarmament as well as nonproliferation policies the contributors assess how German leaders have navigated continuity and change domestically and abroad The volume concludes that Germany remains bound by dependence on the United States and its own conservatism Within these parameters German leaders have adapted slowly to change and continue to balance seemingly contradictory deterrence and disarmament goals This book will be of much interest to students of nuclear proliferation security studies German politics and International Relations as well as policymakers **Earthly Politics** Sheila Jasanoff, Marybeth Martello, 2004-03-19

Globalization today is as much a problem for international harmony as it is a necessary condition of living together on our planet Increasing interconnectedness in ecology economy technology and politics has brought nations and societies into even closer contact creating acute demands for cooperation Earthly Politics argues that in the coming decades global governance will have to accommodate differences even as it obliterates distance and will have to respect many aspects of the local while developing institutions that transcend localism This book analyzes a variety of environmental governance approaches that

balance the local and the global in order to encourage new more flexible frameworks of global governance On the theoretical level it draws on insights from the field of science and technology studies to enrich our understanding of environmental development politics On the pragmatic level it discusses the design of institutions and processes to address problems of environmental governance that increasingly refuse to remain within national boundaries The cases in the book display the crucial relationship between knowledge and power the links between the ways we understand environmental problems and the ways we manage them and illustrate the different paths by which knowledge power formations are arrived at contested defended or set aside By examining how local and global actors ranging from the World Bank to the Makah tribe in the Pacific Northwest respond to the contradictions of globalization the authors identify some of the conditions for creating more effective engagement between the global and the local in environmental governance
