Nuclear Physics At Intermediate Energies:

Intermediate-Energy Nuclear Physics A.S. Iljinov, 2018-01-18 Intermediate Energy Nuclear Physics is devoted to discussing the interaction between hadrons with nuclei which leads to the emission of particles during an intranuclear cascade and subsequent decay of a highly excited residual nucleus Experimental data and the methods and results of the calculation of probabilities of various processes initiated by intermediate energy hadrons in nuclei are set forth and discussed The potential for obtaining information on the structure and properties of nuclei by comparing experimental data with theoretical results is analyzed New issues such as analytic methods for the solution of kinetic equations describing the cascade nuclear absorption of hadrons from bound states of hadronic atoms interaction of antinucleons with nuclei multifragmentation of highly excited residual nuclei and polarization phenomena are discussed in detail The book also demonstrates hadron nucleus interactions that bridge the gap between low energy and heavy ions physics It is an interesting reference for nuclear physicists and other researchers interested in the analysis of problems associated with the evolution of the early hot universe neutron stars and supernovas after burning of radioactive waste in nuclear energy installations and electronuclear energy breeding

Perspectives in nuclear physics at intermediate energies, 1984 **Workshop on "Perspectives on Nuclear Physics at Intermediate Energies."**, 1984 *Perspectives In Nuclear Physics At Intermediate Energies - Proceedings Of The Conference* Sigfrido Boffi, Claudio Ciofi Degli Atti, Mauro Giannini, 1996-03-20 This book focuses on the latest theoretical and experimental results and future perspectives regarding electromagnetic and hadronic physics at intermediate energies Nucleon form factors and spin structure functions deep inelastic scattering excited baryons and mesons and correlations in nuclei are discussed Many new results and the scientific programmes of the different laboratories in Europe and North America are also presented A special section is devoted to relativistic approaches to hadrons and nuclei at intermediate energies

Perspectives in Nuclear Physics at Intermediate Energies, 1984 **Nuclear and Particle Physics at Intermediate Energies** J. Warren, 2012-12-06 The Brentwood Summer Institute on Nuclear and Particle Physics at Intermediate Energies was the second of its kind organised by the TRIUMF group of Universities the first taking place at Banff in 1970 With the advent of initial beams at the new meson facilities at LAMPF SIN NEVIS CERN S C and TRIUMF it was an eminently suitable time for an in depth study of some of the science which will be possible when these accelerators achieve their design intensities in proton and meson beams The organizing committee comprising Univ of Alberta G A Beer Univ of Victoria J M Cameron J M McMillan U B C D F Measday U B C R M Pearce Univ of Victoria J E D Pearson U B C J B Warren U B C wishes to acknowledge the financial support provided by the North Atlantic Treaty Organisation the National Research Council of Canada and Atomic Energy of Canada Ltd without which the Institute could not have been held Also we wish to acknowledge the helpful advice of the Scientific Committee of NATO and of Dr T Kester Secretary of this Committee Many persons from the University of Victoria and the University of British Columbia helped with

The 2nd Workshop on Perspectives in Nuclear Physics at Intermediate Energies, ICTP, Trieste, 25-29 March 1985 S. Boffi, C. Ciofi Degli Atti, M. M. Giannini, 1985

Interactions of Deuterons, Tritons, and 3He-nuclei with Nuclei, 1995-08-30 The precise knowledge of production cross sections for specific radionuclides for medium energies 10 MeV to 100 GeV of the incident particle gains ever more importance not only for nuclear physics but also for many applications e g astrophysics radiation protection at accelerators but also on space flights radioisotope techniques in medicine and for industrial applications and perhaps even for the removal of nuclear waste by accelerators Since the last systematic review of these production cross sections in 1973 LB I 5a b c an impressive amount of new experimental data has been accumulated In the present subvolume data for the production of radioisotopes by medium energetic deuterons tritons and 3He nuclei on various targets are presented in tables and figures

the latter showing the general trend of the cross sections and can be more readily used for interpolations The origin of the authors made it possible to include data from the former USSR and other East European states which sometimes are not easy to access The tables and figures have been compiled with extraordinary care and should present the most complete compilation for this type of nuclear reactions

Common Problems in Low- and Medium-Energy Nuclear Physics B. Castel, B. Goulard, F.C. Khanna, 2012-12-06

The 1978 Advanced Study Institute in Nuclear Theory devoted to common problems in Low and Intermediate Energy Nuclear Physics was held at the Banff Centre in Alberta Canada from August 21 through September 1 1978 The present volume contains the text of 25 lectures and seminars given at the Institute and illustrates the directions that nuclear physicists are taking in the evolution toward a unified picture of low medium and high energy phenomena Recent attempts at unifying the weak and electromagnetic interaction in particle physics have led naturally to question their role in nuclei The success of the quark model at interpreting the new resonances in high energy physics makes it imperative to consider their role in dealing with nuclear physics problems at the microscopic level Is our present knowledge of the nuclear potential consistent with recent experimental evidence at low and medium energy and can it correlate meaningfully nuclear and pion physics phenomena These are some of the fundamental questions debated in this book attempting to offer a consistent picture of the nuclear system as it emerges using the electromagnetic weak and strong interaction probe The lectures and seminars forming the present volume have been divided into four sections dealing with a the weak interaction b quarks and nuclear structure c physics of electrons protons and kaons and finally d pion physics
