| <b>Nursing Implications/Responsibilities</b><br>Nurses should check for hypotension in a patient and hold the medication if the systolic blood pressure is below 100 mmHg and the heart rate is below 60 bpm. The Nurse must also watch for adverse side effects when given a Betablocker and always check the blood pressure before and after giving the medication. The patients health history is important to make sure there are no contraindications such as asthma and CHF. It is also important to monitor the patient at risk for falls in diabetic patients due to orthostatic hypotension and Hypoglycemia masking effect. |                                                     |                       |
