Nutrient Use Efficiency in Plants Malcolm J. Hawkesford, Stanislav Kopriva, Luit J. De Kok, 2014-11-14

Nutrient Use Efficiency in Plants: Concepts and Approaches is the ninth volume in the *Plant Ecophysiology* series. It presents a broad overview of topics related to improvement of nutrient use efficiency of crops. Nutrient use efficiency (NUE) is a measure of how well plants use the available mineral nutrients. It can be defined as yield/biomass per unit input/fertilizer/nutrient content. NUE is a complex trait; it depends on the ability to take up the nutrients from the soil but also on transport/storage/mobilization/usage within the plant and even on the environment. NUE is of particular interest as a major target for crop improvement. Improvement of NUE is an essential prerequisite for expansion of crop production into marginal lands with low nutrient availability but also a way to reduce use of inorganic fertilizer.

Achieving sustainable crop nutrition Prof Zed Rengel, 2020-02-18

Focus on integrating research on nutrient cycling, crop nutrient processing and the environmental impact of fertiliser use to identify ways of improving nutrient use efficiency. NUE in the use of particular fertilisers. Includes research on a range of secondary macronutrients and micronutrients including calcium, magnesium, zinc, boron, manganese and molybdenum. Reviews a wide range of options for reducing/optimising current levels of fertiliser use.

Mineral Nutrition of Crops Zdenko Rengel, 1999-06-18

The first book on crop nutrition that covers topics from soil hydrology to molecular biology. The first book ever to elucidate so many different aspects of mineral nutrition of crops. *Mineral Nutrition of Crops: Fundamental Mechanisms and Implications* will allow you to grasp the complexity of the soil-water-plant-microbe interactions governing nutrient uptake and utilization by crops. By emphasizing a fundamental mechanistic approach, this book effectively complements the monograph *Nutrient Use in Crop Production*. The Haworth Press Inc. With *Mineral Nutrition of Crops*, you will explore the many facets necessary to increase crop and pasture yields and minimize unwanted losses of nutrients to the environment. *Mineral Nutrition of Crops* covers a wide range of topics that span several scientific disciplines: agriculture, agronomy, botany, forestry, ecology, plant science and soil science. From this book, you will gain vital knowledge required to understand the complexity of mechanisms and processes governing nutrient transport toward roots, including biological and chemical reactions influencing nutrient availability in the rhizosphere, uptake by root cells, long-distance transport toward grain and the role of nutrients in metabolism. Also, you will explore issues relating to the following topics: biology and chemistry of nutrient availability in the rhizosphere, kinetics of nutrient uptake by plant cells, role of mineral photosynthesis and yield formation, importance of seed nutrient reserves in crop growth and development, breeding crops for improved nutrient efficiency, significance of root size for plant production, monitoring water and nutrient fluxes down the profile.
