Food and nutrition security in transforming Ghana: A descriptive analysis of national trends and regional patterns Van Asselt, Joanna, Ecker, Olivier, 2017-06-16 In recent decades Ghana has experienced high economic growth and transformation which contributed to the nation achieving the Millennium Development Goal targets on reducing extreme poverty and hunger Against this background and in view of achieving the food and nutrition security targets of the Sustainable Development Goals Ghana started a process of reviewing its food security and nutrition strategies and policies including the overarching Zero Hunger Strategy This discussion paper aims to contribute to this process by providing an update on the state of Ghana's food and nutrition security In addition to providing an overview of long term historical trends at the national level this analysis provides an overview of regional patterns of food and nutrition insecurity and recent changes across Ghana's 10 administrative regions Finally the analysis identifies regional hot spots of food and nutrition insecurity This paper confirms that Ghana has achieved substantial improvements in food and nutrition security overall especially over the past decade Nationwide progress has been made in improving households economic access to food by reducing poverty and extreme poverty and in reducing chronic and acute child undernutrition However progress in reducing micronutrient malnutrition particularly anemia and especially among young children has been more modest Across Ghana large rural urban gaps and regional differences mainly between the

north and the south remain for most dimensions of food and nutrition security In addition Ghana is increasingly facing new nutrition related public health problems that result from overnutrition and diets too rich in calories Overweight and obesity among adults are rising rapidly in both urban and rural areas leading to an increase in the risk of noncommunicable diseases The rising double burden of malnutrition that is the coexistence of overnutrition and undernutrition including micronutrient deficiencies constitutes a challenge to public health and social protection policy These new nutritional realities may make some existing food and nutrition security policies obsolete or even detrimental to nutrition security **Adequate Food for**

The global obesity epidemic is arguably the most serious health issue facing the food industry today Food manufacturers are under increasing pressure over both the degree to which they are seen as contributing to the problem and the role they should play in solving it Drawing on the expertise of many of the world's leading experts in this area Food diet and obesity summarises the key research on the links between obesity and diet Topics discussed include trends in obesity the evidence behind popular diets and meal replacers the effectiveness of fat and sugar replacers in food emerging issues such as the value of the glycemic index protein content and calcium in weight control and potential functional food targets and ingredients for weight control After an introductory chapter on global trends in obesity part one looks at the range of contributing factors to obesity from nutrient gene interactions energy metabolism and physical activity to sensory responses to food portion size and the psychology of overeating Part two looks at macronutrients and their role in weight gain or loss with chapters on topics such as energy density dietary fat carbohydrates protein and dietary fibre The final part of the book discusses issues in developing effective strategies for weight control from gaining consumer acceptance of weight control food products through functional food ingredients to community based public health approaches in preventing obesity With its distinguished editor and contributors Food diet and obesity is a standard work for health professionals nutritionists and R D staff throughout the food industry as well as all those concerned with understanding and reducing obesity Summarises key research which links diet and obesity Trends in obesity are examined Contributory factors to obesity are investigated including lifestyle and genetics **Evolving Human Nutrition** Stanley J. Ulijaszek, Neil Mann, Sarah Elton, 2012-10-18

Exploration of changing human nutrition from evolutionary and social perspectives and its influence on health and disease past and present **Nutrition and economic development** Ecker, Olivier, Al-Riffai, Perrihan, Breisinger, Clemens, El-Batrawy, Rawia, 2016-11-15 This book's main hypothesis is that Egypt's large food subsidy system has been ineffective in reducing undernutrition in fact it may have contributed to sustaining and even aggravating both nutrition challenges For a long time the subsidy system provided only calorie rich foods at very low and constant prices and with quotas much above dietary recommendations This system has created incentives to consume calorie overladen and unbalanced diets increasing the risks of child and maternal overnutrition and at high subsidy levels the risk of inadequate child nutrition Moreover the large public budget allocated to the food subsidies is unavailable for possibly more nutrition beneficial spending such as for child and maternal nutrition specific interventions The authors findings consistently suggest that in addition to the well known economic rationale for reforming the Egyptian food subsidy system there are strong reasons to reform food subsidies due to nutrition and public health concerns A fundamental food subsidy reform process has been under way since June 2014 The already implemented changes can be expected to have reduced some incentives for

overconsumption and may have positive dietary effects. However, further major reform efforts are needed to transform the current subsidy system into a key policy instrument in the fight against malnutrition. The findings of this book should be valuable to policy makers, analysts, development partners and others concerned with improving food security and promoting healthy nutrition in Egypt and other developing countries with large social protection programs. **Handbook of Pediatric Obesity** Michael I. Goran, Melinda S. Sothorn, 2016-04-19 Understanding the numerous factors involved with body weight regulation and identifying interventions to prevent or treat the problem is an enormous task in and of itself. Addressing this issue in growing children is further complicated by the diverse challenges specific to children. Because of this, the field of childhood obesity is both extremely *Health Change in the Asia-Pacific Region* Ryutaro Ohtsuka, Stanley J. Ulijaszek, 2007-05-24 The Asia Pacific region has seen great social, environmental and economic change across the past century, leading to dramatic changes in the health profiles of all populations represented in South East and East Asia, Pacific Islands and the islands of Melanesia. This volume considers evidence concerning prehistoric migration and colonial regional and global processes in the production of health change in the Asia Pacific region. Notably, it examines ways in which a health pattern dominated by under nutrition and infection has been displaced in many ways and is being displaced elsewhere by over nutrition and the degenerative diseases associated with it. This book presents a cohesive view of the ways in which exchange relationships, economic modernization, migration and transnational linkages interact with changing rural subsistence ecologies to influence health patterns in this region. **Encyclopedia of Human Nutrition**, 2012-12-28 The role of nutrition in improving quality of life and combating disease is undeniable, and researchers from different disciplines are bringing their perspectives to bear on this fundamental topic. The 4 volume *Encyclopedia of Human Nutrition* Third Edition is a thorough revision of the previous award winning version and reflects the scientific advances in the field of human nutrition. It presents the latest understanding on a wide range of nutrition related topics including food safety, weight management, vitamins, bioengineering of foods, plant based diet and raw foods among others. New articles on organic food, biofortification, nutritional labeling and the effect of religious customs on diet among many others reflect the dedication to currency in this revision. It not only contains the most current and thorough information available on the topic but also contains broader cross referencing on emerging opportunities for potential treatment and prevention of diseases. An ideal starting point for scientific research, *Encyclopedia of Human Nutrition* Third Edition continues to provide authoritative information in an accessible format, making this complex discipline available to readers at both the professional and non professional level. Selected for inclusion in Doody's Core Titles 2013, an essential collection, development tool for health sciences libraries. Approximately 30% new content ensures readers have the latest research information. Extensive cross referencing provides key connections between topics in this multidisciplinary field. Presents current information on relationships between disease and nutrition. Covers thoroughly topics ranging from nutrient biochemistry and function to
