Passion For Physics The Story Of A Woman Physicist:

A Passion for Physics Joan Freeman, 1991-01-01 Few research scientists write their autobiographies. Consequently their motivations, aspirations, and the ways in which they operate are poorly understood by the outside world. Putting a human face to physics. *A Passion for Physics: The Story of a Woman Physicist* is a welcome addition to the small number of examples of its kind. As the author vividly describes, it was not easy for young women to acquire a broad scientific education, particularly before World War II in Australia where she was born and grew up. Although their prospects are much better now than they were, women today still meet some discouragement in taking up physics as a career. Beginning with an account of her early life, Dr. Freeman describes her struggles to gain a physics education, the vicissitudes of the Depression, her experiences at Sydney University, and her years in the wartime radar establishment in Sydney. The story continues with the tribulations and triumphs of the author's period at the Cavendish Laboratory in Cambridge, her meeting with physicist John Jelley, whom she ultimately married, her transition to the Atomic Energy Research Establishment in Harwell, and her adventures in the United States. The book captures Dr. Freeman's sense of excitement and awe in gaining through her profession a fresh insight into the beauty, the intricacies, and the mystery of the physical world, and her admiration of the advances in understanding that have been achieved through continuing human endeavor. Dr. Freeman's story provides an encouraging role model for aspiring young women physicists. Avoiding emphasis on technical aspects of physics, the book is a source of entertainment for the general reader, with its many often humorous anecdotes about the author and her contemporaries. *A Passion for Physics* Joan Freeman, 1991 *The Cambridge History of Science: Volume 5, The Modern Physical and Mathematical Sciences* David C. Lindberg, Mary Jo Nye, Roy Porter, Ronald L. Numbers, 2003 A new and comprehensive examination of the history of the modern physical and mathematical sciences *Military Masculinity and Postwar Recovery in the Soviet Union* Erica L. Fraser, 2019-04-08 Catastrophic wartime casualties and postwar discomfort with the successes of women who had served in combat roles combined to shatter prewar ideals about what service meant for Soviet masculine identity. The soldier had to be reimagined and resold to a public that had just emerged from the Second World War and a younger generation suspicious of state control. In doing so, Soviet military culture wrote women out and attempted to reestablish soldiering as the premier form of masculinity in society. *Military Masculinity and Postwar Recovery in the Soviet Union* combines textual and visual analysis, as well as archival research, to highlight the multiple narratives that contributed to rebuilding military identities. Each chapter visits a particular site of this reconstruction, including debates about conscription and evasion, appropriate role models for cadets, misogynist military imagery in cartoons, the fraught militarized workplaces of nuclear physicists, and the first cohort of cosmonauts who represented the completion of the project to rebuild militarized masculinity. *American Journal of Physics*, 1995 ***Making Waves*** M. Goss, 2013-07-10 This book is an abbreviated, partly re-written version of *Under the Radar: The First Woman in Radio Astronomy* by Ruby Payne-Scott. It addresses a general readership interested in

historical and sociological aspects of astronomy and presents the biography of Ruby Payne Scott 1912 1981 As the first female radio astronomer and one of the first people in the world to consider radio astronomy she made classic contributions to solar radio physics She also played a major role in the design of the Australian government's Council for Scientific and Industrial Research radars which were in turn of vital importance in the Southwest Pacific Theatre in World War II These radars were used by military personnel from Australia the United States and New Zealand From a sociological perspective her career offers many examples of the perils of being a female academic in the first half of the 20th century Written in an engaging style and complemented by many historical photographs this book offers fascinating insights into the beginnings of radio astronomy and the role of a pioneering woman in astronomy To set the scene the first colourfully illustrated chapter presents an overview of solar astrophysics and the tools of the radio astronomer From the reviews of *Under the Radar* This is a beautifully researched copiously illustrated and well written book that tells us much more than the life of one amazing female radio astronomer It also provides a profile on radar developments during WWII and on Australia's pre eminent place in solar radio astronomy in the years following WWII *Under the Radar* is compelling reading and if you have taken the time to read right through this review then it certainly belongs on your bookshelf Wayne Orchiston *Journal of Astronomical History and Heritage* March 2010

Golden Years of Australian Radio Astronomy Wayne Orchiston, Peter Robertson, Woodruff T. Sullivan III, 2022-01-20 The evolution of Australian radio astronomy from 1945 to 1960 has been studied in detail by numerous historians of science in recent years This Open Access book is the first to present an overview of this remarkable chapter in Australian science The book begins in the post war period as the Radiophysics Laboratory in Sydney switched from secret wartime research on radar to peacetime applications of this new technology Next follows the detection of radio waves from space and the ensuing transformation of this fledgling science into the dominant research program at the Radiophysics Lab Drawing from this history the book shows how by 1960 the Radiophysics Lab had become the largest and most successful radio astronomy group in the world The final chapter presents an overview of Australian radio astronomy from 1960 to the present day as Australia prepares to co host the multi national multi billion dollar Square Kilometre Array Nearly 300 high quality images complement the text drawn from a wide range of sources including the extensive collection held by the CSIRO Radio Astronomy Image Archive The book will be an essential reference for readers interested in the scientific and cultural development of radio astronomy This book is published open access under a CC BY 4.0 license

Women in Chemistry Marelene F. Rayner-Canham, Geoffrey Rayner-Canham, 1998 Though rarely noted women have been active participants in the chemical sciences since the beginning of recorded history This thought provoking book brings to life the many talented women who besides the universally respected Marie Curie made significant contributions to chemistry The Rayner Canhams examine the forces that have defined women's roles in the progress of chemistry observing that many were thwarted from capitalizing on their achievements by the prejudices of their time Their book discusses women

chemists from as far past as the Babylonian civilization but focuses on professional women chemists from the mid 19th century when women gained access to higher education Read this book and learn about the chemist assistants of the French salons about independent researchers in the 19th century about the three disciplinary havens for women in the 20th century about how war helped bring women into the chemical industry and much more [A Matter of Choices](#) Fay

Ajzenberg-Selove,1994 When the author became a nuclear physicist the number of women in the field could be counted on one hand In this memoir she reveals her difficult journey to international recognition in physics She is frank about the ways being a woman has made a difference in her opportunities and choices as a scientist and how by being a woman she has made a difference in the world of physics [Joe Pawsey and the Founding of Australian Radio Astronomy](#) W. M. Goss,Claire Hooker,Ronald D. Ekers,2023-01-10 This open access book is a biography of Joseph L Pawsey It examines not only his life but the birth and growth of the field of radio astronomy and the state of science itself in twentieth century Australia The book explains how an isolated continent with limited resources grew to be one of the leaders in the study of radio astronomy and the design of instruments to do so Pawsey made a name for himself in the international astronomy community within a decade after WWII and coined the term radio astronomy His most valuable talent was his ability to recruit and support bright young scientists who became the technical and methodological innovators of the era building new telescopes from the Mills Cross and Chris Christiansen Cross to the Parkes radio telescope The development of aperture synthesis and the controversy surrounding the cosmological interpretation of the first major survey which resulted in the Sydney research group s disagreements with Nobel laureate Martin Ryle play major roles in this story This book also shows the connections among prominent astronomers like Oort Minkowski Baade Struve famous scientists in the UK such as J A Ratcliffe Edward Appleton and Henry Tizard and the engineers and physicists in Australia who helped develop the field of radio astronomy Pawsey was appointed the second Director of the National Radio Astronomy Observatory Green Bank West Virginia in October 1961 he died in Sydney at the age of 54 in late November 1962 Upper level students scientists and historians of astronomy and technology will find the information much of it from primary sources relevant to any study of Joseph L Pawsey or radio astronomy This open access book includes a Foreword by Woodruff T Sullivan II [Imagining The Elephant: A Biography Of Allan Macleod Cormack](#) Christopher Leonard Vaughan,2008-06-02 Imagining the Elephant is a biography of Allan MacLeod Cormack a physicist who was awarded the Nobel Prize for Medicine in 1979 for his pioneering contributions to the development of the computer assisted tomography CAT scanner an honor he shared with Godfrey Hounsfield A modest genius who was also a dedicated family man the book is a celebration of Cormack s life and work It begins with his ancestral roots in the far north of Scotland and then chronicles his birth and early years in South Africa his education at the University of Cape Town UCT and Cambridge University and his subsequent academic appointments at UCT and Tufts University in Boston USA It details his discovery of the problem at Cape Town in 1956 traces his scientific footsteps all the way to

Cherenkov Reflections: Gamma-ray Imaging And The Evolution Of TeV Astronomy David Fegan, 2019-06-27 This book is recommended to those interested in knowing how TeV astronomy began evolved and remains a growth area The author has captured the difficulties of being a pioneer amply demonstrating the need to keep the faith and work the problem until you succeed Cherenkov telescopes are now in operation around the world and at the dawn of the CTA era TeV astronomy has a lot of evolving still to do The Observatory This book documents how TeV gamma ray astronomy painstakingly emerged from 20th century traditional cosmic ray physics to become a keystone feature of contemporary high energy astrophysics fundamental to our understanding of high energy cosmic processes and interactions Contemporary TeV observations are based on the Imaging Atmospheric Cherenkov Technique and in excess of two hundred individual galactic and extra galactic gamma ray sources have now been discovered and studied in detail The book tells the story from the perspective of the Whipple Observatory collaboration pioneers of the imaging technique At the same time parallel developments by the broader community are constantly referenced discussed and evaluated mainly in the TeV energy regime but also where relevant at PeV energies The narrative traces the contributions of many important participants active in the field since the mid 1950s and critically evaluates and provides commentary on the progress of research until the first sources were established beyond doubt during the late 1980s and early 1990s The final chapter presents a short summary of the contemporary status of TeV gamma ray astronomy Written predominantly from a historical perspective the author guides readers through many decades of instrumental development and evolution using only minimal mathematical background This book will appeal to astrophysicists particle physicists traditional optical and radio astronomers as well as others working across a variety of related cognate disciplines It should be of interest and value to graduate students involved with contemporary fourth generation TeV research programs such as CTA Cherenkov Telescope Array

Dancing Naturally A. Carter, R. Fensham, 2011-12-02 A renewed interest in nature the ancient Greeks and the

freedom of the body was to transform dance and physical culture in the early twentieth century The book discusses the creative individuals and developments in science and other art forms that shaped the evolution of modern dance in its international context Devotion to Their Science Marelene F. Rayner-Canham, Geoffrey W. Rayner-Canham, 1997-05-28 A Devotion to Their Science includes biographical essays on twenty three women who worked in atomic science during the first two decades of the twentieth century including Marie Curie Lise Meitner Ir ne Joliot Curie and a host of lesser known women scientists whose life stories have never before been told The biographies highlight the lives and work of these women noting their contributions and the challenges they faced and overcame Taken together the essays record their collective experiences highlighting the support network that developed among them and the reasons women were more predominant in this field than in other sciences in the early part of this century By recovering and recording individual and collective histories of the many eminent women in radioactivity whose work had a major impact on the scientific discoveries of the twentieth century a more complete gender integrated view of the history of this fascinating field emerges **A Single Sky** David P.D. Munns, 2012-10-26 How radio astronomers challenged national borders disciplinary boundaries and the constraints of vision to create an international scientific community For more than three thousand years the science of astronomy depended on visible light In just the last sixty years radio technology has fundamentally altered how astronomers see the universe Combining the wartime innovation of radar and the established standards of traditional optical telescopes the radio telescope offered humanity a new vision of the universe In A Single Sky the historian David Munns explains how the idea of the radio telescope emerged from a new scientific community uniting the power of radio with the international aspirations of the discipline of astronomy The radio astronomers challenged Cold War era rivalries by forging a united scientific community looking at a single sky Munns tells the interconnecting stories of Australian British Dutch and American radio astronomers all seeking to learn how to see the universe by means of radio Jointly this international array of radio astronomers built a new community style of science opposing the glamour of nuclear physics A Single Sky describes a communitarian style of science a culture of interdisciplinary and international integration and cooperation and counters the notion that recent science has been driven by competition Collaboration or what a prominent radio astronomer called a blending of radio invention and astronomical insight produced a science as revolutionary as Galileo s first observations with a telescope Working together the community of radio astronomers revealed the structure of the galaxy *International Women in Science* Catherine M.C. Haines, 2001-11-20 A comprehensive biographical guide to the scientific achievements personal lives and struggles of women scientists from around the globe International Women in Science A Bibliographical Dictionary to 1950 presents the enormous contributions of women outside North America in fields ranging from aviation to computer science to zoology It provides fascinating profiles of nearly 400 women scientists both renowned figures like Florence Nightingale and Marie Curie and women we should know better like Rosalind Franklin who along with James Watson and Francis Crick uncovered the

structure of DNA Students and researchers will see how the lives of these remarkable women unfolded and how they made their place in fields often stubbornly guarded by men overcoming everything from limited education and professional opportunities to indifference ridicule and cultural prejudice to outright hostility and discrimination Included are a number of living scientists many of whom provide insights into their lives and scientific times Those contributions plus additional previously unavailable material make this a volume of unprecedented scope and richness Gaither's Dictionary of Scientific Quotations Carl C. Gaither,Alma E. Cavazos-Gaither,2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics Reader's Guide to the History of Science Arne Hessenbruch,2000 First Published in 2001 Routledge is an imprint of Taylor Francis an informa company **Under the Radar** M Goss,Richard McGee,2009-09-24 It is rare for a complete biography of an Australian scientist particularly of an Australian woman scientist to be published It is rarer for such a book to be co authored by an American Although scientists have written discourses on the history of their discipline it is most unusual for a scientist to write a full length biography of a colleague in his eld It is also uncommon for a man to write about an Australian woman scientist most of the work on Australian women scientists has been done by other women However these authors both distinguished researchers in the eld of radio astr omy became so interested in the history of their discipline and in the career of the pioneer radio astronomer Ruby Payne Scott that they spent some years bringing this book to fruition Until relatively recently Ruby Payne Scott had been the only woman scientist mentioned brie y in histories of Australian science or of Australian radio astronomy This book will be an invaluable resource for anyone interested in these disciplines Being scientists themselves the authors explain Payne Scott s scienti c work in detail therefore the value and importance of her contributions can for the rst time be recognised not only by historians but also by scientists

Adopting the Track of Expression: An Emotional Symphony within **Passion For Physics The Story Of A Woman Physicist**

In a global consumed by screens and the ceaseless chatter of instant interaction, the melodic splendor and mental symphony created by the prepared word usually disappear into the background, eclipsed by the persistent noise and interruptions that permeate our lives. However, nestled within the pages of **Passion For Physics The Story Of A Woman Physicist** a stunning fictional prize full of natural thoughts, lies an immersive symphony waiting to be embraced. Constructed by an outstanding musician of language, that interesting masterpiece conducts readers on a mental trip, skillfully unraveling the concealed tunes and profound impact resonating within each cautiously crafted phrase. Within the depths of the moving examination, we will explore the book is key harmonies, analyze their enthralling publishing model, and submit ourselves to the profound resonance that echoes in the depths of readers souls.
