Past And Present Vegetation Of The Far Northwest Canada:

Past and Present Vegetation of the Far Northwest of Canada James Cunningham Ritchie, 1984 Quaternary history of vegetation in the northern Yukon and adjacent Mackenzie Delta region Post-glacial Vegetation of Canada J. C. Ritchie, 2004-04 This book brings together all the available information about the complex history of vegetational and environmental change in Canada since the last Ice Age Professor Ritchie discusses the roles of climatic change wildfires diseases and biological factors in controlling the emerging patterns of new plant growth **Vegetation history** B. Huntley, T. Webb III, 2012-12-06 The analysis of vegetation history is one of the prime objectives for vegetation scientists In order to understand the recent composition of local floras and plant communities a second knowledge of species composition during recent millennia is essential With the present concern over climate changes due to human activities an understanding of past vegetation distribution becomes even more important since the correlation between climate and vegetation can often be used to predict possible impacts to crops and forests I was very fortunate to receive the help of Drs Webb and Huntley to compile this volume on vegetation history They have collated an impressive set of papers which together give an account of the vegetation history of most of the continents during the late Tertiary and Quaternary periods There are however gaps in the coverage achieved most notably Africa and Asia apart from Japan The information in this book will nonetheless certainly be used widely by vegetation scientists for the regions covered in the book and much of it has relevance to the areas not explicitly described The authors of the individual chapters have done their best to cover recent topics of interest as well as established facts It is intended that a separate volume will be produced in the near future covering the vegetation history of Africa and Asia I thank the editors of It fits well into this volume for their commendable achievement North American Terrestrial Vegetation Michael G. Barbour, William Dwight Billings, 2000 This second edition provides extensively expanded coverage of North American vegetation from arctic tundra to tropical forests **Canada's Cold Environments** Hugh M. French, Olav Slaymaker, 1993 Low temperatures wind chill snow sea ice and permafrost have been primary characteristics of Canada's northern and alpine environments during the past two million years The evolution of Canada's cultural landscapes the processes of settlement of rural areas and the present interaction of Canadian industrial society with its biophysical environment are all deeply influenced directly or indirectly by the frigidity of the greater part of the country The phenomenon of global warming if it occurs will lessen this coldness but its impact on temperature extremes sea ice regimes vegetation snow distribution permafrost glaciers lakes rivers and mountain hazards are all the subject of intensive research the highlights of which are reviewed in Canada's Cold Environments Eleven of Canada's leading geographers geologists and ecologists provide an authoritative yet readable scientific statement about the physical nature of Canada's coldness They focus on the distinctive attributes of Canada's cold environments their temporal and spatial variability and the constraints that coldness places on human activity The book is aimed at environmental scientists at all levels who need informed

overviews of the substantive findings on a range of cold related topics The Evolution of Human Hunting Matthew H. Nitecki, Doris V. Nitecki, 2013-11-11 The successful early adaptations of man involve a complex interplay of biological and cultural factors There is a rapidly growing number of paleontologists and paleoanthropologists who are concerned with hominid foraging and the evolution of hunting New techniques of paleoanthropology and taphonomy and new information on human remains are added to the traditional approaches to the study of past human hunting and other foraging behavior There is also a resurgence of interest in the early peopling of the New World The present book is the result of the Ninth Annual Spring Systematics 10 1986 in the Symposium on the Evolution of Human Hunting held on May Field Museum of Natural History in Chicago We are grateful to the NSF grant no BNS 8519960 for partial financial support in arranging the symposium In preparation of this volume we have received assistance from many people particularly the reviewers of individual chapters it is impossible to name them all We must however single out Drs Richard G Klein and Glen H Cole for their encouragement at various stages of preparation of the symposium and this volume and for being a help to the anthropological knowledge Zbigniew Jastrzebski assisted with the figures and Paul K Johnson diligently typed the camera ready copy and patiently coordinated the endless book making chores **Arctic Ecosystems in a Changing Climate** F. Stuart Chapin III, Robert L. Jefferies, James F. Reynolds, Gaius R. Shaver, Josef Svoboda, Ellen W. Chu, 2012-12-02 The arctic region is predicted to experience the earliest and most pronounced global warming response to human induced climatic change This book synthesizes information on the physiological ecology of arctic plants discusses how physiological processes influence ecosystem processes and explores how climate warming will affect arctic plants plant communities and ecosystem processes Reviews the physiological ecology of arctic plants Explores biotic controls over community and ecosystems processes Provides physiological bases for predicting how the Arctic will respond to global climate change **Patterns of Life** Howard Mielke, 2012-12-06 Insight into universal nature provides an intellectual life Why are so many plants and animals especially delight and sense of freedom that no blows of fate and freshwater species at risk of extinction These are a few no evil can destroy of the questions that have intrigued observers of nature Alexander von Humboldt 1805 and the Earth By studying the Earth s patterns of life students of biogeography ultimately ponder some of the on that small spot that little blue and white thing most basic questions about life and the cosmos is everything that means anything to you all of history and music and poetry and art and death and birth and love tears joy games all of it on that little Historical roots of biogeography spot out there that you can cover with your thumb The topic of biogeography has its roots in the work of And you realize from that perspective that you ve Alexander von Humboldt the recognized father of plant changed that there s something new there that the geography Detwyler 1969 Browne 1983 From its relationship is no longer what it was **Dry Creek** W. Roger Powers, R. Dale Guthrie, John F. Hoffecker, 2017-04-14 With cultural remains dated unequivocally to 13 000 calendar years ago Dry Creek assumed major importance upon its excavation and study by W Roger Powers The site was the

first to conclusively demonstrate a human presence that could be dated to the same time as the Bering Land Bridge As Powers and his team studied the site their work verified initial expectations Unfortunately the research was never fully published Dry Creek The Archaeology and Paleoecology of a Late Pleistocene Alaskan Hunting Camp is ready to take its rightful place in the ongoing research into the peopling of the Americas Containing the original research this book also updates and reconsiders Dry Creek in light of more recent discoveries and analysis

Concise Historical Atlas of Canada Geoffrey J. Matthews, Conrad Heidenreich, Byron Moldofsky, Thomas F. McIlwraith, John Warkentin, 1998-01-01 A distillation of sixty seven of the best and most important plates from the original three volumes of the bestselling of the Historical Atlas of Canada

Geomorphology David J. A. Evans, 2004 The seven volumes in this series contain reproductions of papers that the individual editors regarded as the initiators of critical concepts in geomorphology

Holocene Extinctions Sam Turvey, 2009-05-28 This makes a detailed consideration of these extinctions a useful system for investigating the impacts of human activity over time

General Technical Report NC., 1981

American Beginnings Frederick Hadleigh West, Constance F. West, 1996-12 During the last Ice Age a thousand mile wide land bridge connected Siberia and Alaska creating the region known as Beringia Over twelve thousand years ago a procession of large mammals and the humans who hunted them crossed this bridge to America Much of the Russian evidence for this migration has until now remained largely inaccessible to American scholars American Beginnings brings together for the first time in one volume the most up to date archaeological and palaeoecological evidence on Beringia from both Russia and America An invaluable resource It will no doubt remain the key reference book for Beringia for many years to come Steven Mithen Journal of Human Evolution

Extraordinary The fifty six contributors represent the most prominent American and Russian researchers in the region Choice Publication of this well illustrated compendium is a great service to early American and especially Siberian Upper Paleolithic archaeology Nicholas Saunders New Scientist This is a great book perhaps the greatest contribution to the archaeology of Beringia that has yet been published This is the kind of book to which archaeology should aspire Herbert D G Maschner Antiquity

The Guises of Canadian Diversity / Les masques de la diversité canadienne, 2022-06-08 The essays collected here illustrate aspects of recent research conducted by graduate students in Canadian studies at various European universities The methodological diversity displayed points to the very essence of the culture the contributors explore what has been commonly termed the Canadian mosaic or more recently the Canadian kaleidoscope Janice Kulyk Keefer In analysing the many facets of this mosaic the numerous images of this kaleidoscope the contributors offer fresh and youthful reappraisals of traditional visions of Canadianness

Forest Development in Cold Climates John Alden, J. Louise Mastrantonio, Søren Ødum, 2013-06-29 As forests decline in temperate and tropical climates highly developed countries and those striving for greater economic and social benefits are beginning to utilize marginal forests of high latitude and mountainous regions for resources to satisfy human needs The benefits of marginal forests range from purely aesthetic to

providing resources for producing many goods and services demanded by a growing world population Increased demands for forest resources and amenities and recent warming of high latitude climates have generated interest in reforestation and afforestation of marginal habitats in cold regions Afforestation of treeless landscapes improves the environment for human habitation and provides for land use and economic prosperity Trees are frequently planted in cold climates to rehabilitate denuded sites for the amenity of homes and villages and for wind shelter recreation agroforestry and industrial uses In addition forests in cold climates reduce the albedo of the earth s surface in winter and in summer they are small but significant long lived sinks for atmospheric carbon dioxide Finally growth and reproductive success of forests at their geographic limits are sensitive indices of climatic change As efforts to adapt forests to cold climates increase however new afforestation problems arise and old ones intensify Austral northern and altitudinal tree limits are determined by many different factors Current hypotheses for high latitude tree limits are based on low growing season temperatures that inhibit plant development and reproduction

Sedimentary Cover of the Craton in Canada D.F. Stott,J.D. Aitken,1993 The early chapters of the volume present data and interpretations of the geophysics of the craton and summarise with sequential maps the tectonic evolution of the craton The main body of the text and accompanying plates and figures present the stratigraphy structural history and economic geology of specific sedimentary basins and regions The volume concludes with a summary chapter in which the currently popular theories of cratonal tectonics are discussed and the unresolved questions are identified

Tundra Peter D. Moore,2009 Describes the tundra biome including climate geology geography and biodiversity

Encyclopedia of the Arctic Mark Nuttall,2005-09-23 With detailed essays on the Arctic s environment wildlife climate history exploration resources economics politics indigenous cultures and languages conservation initiatives and more this Encyclopedia is the only major work and comprehensive reference on this vast complex changing and increasingly important part of the globe Including 305 maps This Encyclopedia is not only an interdisciplinary work of reference for all those involved in teaching or researching Arctic issues but a fascinating and comprehensive resource for residents of the Arctic and all those concerned with global environmental issues sustainability science and human interactions with the environment

Permafrost Ecosystems Akira Osawa,Olga A. Zyryanova,Yojiro Matsuura,Takuya Kajimoto,Ross W. Wein,2010-01-04 Drawing from a decade long collaboration between Japan and Russia this important volume presents the first major synthesis of current knowledge on the ecophysiology of the coniferous forests growing on permafrost at high latitudes It presents ecological data for a region long inaccessible to most scientists and raises important questions about the global carbon balance as these systems are affected by the changing climate Making up around 20% of the entire boreal forests of the northern hemisphere these permafrost forest ecosystems are subject to particular constraints in terms of temperature nutrient availability and root space creating exceptional ecosystem characteristics not known elsewhere This authoritative text explores their diversity structure dynamics and physiology It provides a comparison of

these forests in relation to boreal forests elsewhere and concludes with an assessment of the potential responses of this unique biome to climate change The book will be invaluable to advanced students and researchers interested in boreal vegetation forest ecology silviculture and forest soils as well as to researchers into climate change and the global carbon balance
