Past Space And Self:

Past, Space, and Self John Campbell, 1994 John Campbell shows that the general structural features of human thought can be seen as having their source in the distinctive ways in which we think about space and time Space and Self in Early Modern European Cultures David Warren Sabean, Malina Stefanovska, 2012-01-01 The notion of selfhood conjures up images of self sufficiency integrity introspectiveness and autonomy characteristics typically associated with modernity The seventeenth century marks the crucial transition to a new form of bourgeois selfhood although the concept goes back to the pre modern and early modern period A richly interdisciplinary collection Space and Self integrates perspectives from history history of literature and history of art to link the issue of selfhood to the new and vital literature on space As Space and Self shows there have at all times been multiple paths and alternative possibilities for forming identities marking personhood and experiencing life as a concrete singular individual Positioning self and space as specific and evolving constructs a diverse group of contributors explore how persons become embodied in particular places or inscribed in concrete space Space and Self thus sets the terms for current discussion of these topics and provides new approaches to studying their cultural The Self? Galen Strawson, 2005-06-24 This collection of philosophical papers reflects on the existence and nature of the self A collection of philosophical papers devoted to the subject of the self Reflects on key questions about the existence and nature of the self Comprises contributions from leading authorities in the field Barry Dainton Ingmar Persson Marya Schechtman Galen Strawson Bas van Fraassen and Peter van Inwagen **Self and Space in the Theater of Susan** Glaspell Noelia Hernando-Real, 2011-10-10 Founding member of the Provincetown Players Pulitzer Prize winning playwright best selling novelist and short story writer Susan Glaspell 1876 1948 was a great contributor to American literature An exploration of eleven plays written between the years 1915 and 1943 this critical study focuses on one of Glaspell's central themes the interplay between place and identity This study examines the means Glaspell employs to engage her characters in proxemical and verbal dialectics with the forces of place that turn them into victims of location Of particular interest are her characters attempts to escape the influence of territoriality and shape identities of their own Self-evolving Cosmos, The: A Phenomenological Approach To Nature's Unity-in-diversity Steven M Rosen, 2008-02-22 This unique book offers an original way of thinking about two of the most significant problems confronting modern theoretical physics the unification of the forces of nature and the evolution of the universe In bringing out the inadequacies of the prevailing approach to these questions the author demonstrates the need for more than just a new theory. The meanings of space and time themselves must be radically rethought which requires a whole new philosophical foundation To this end the book turns to the phenomenological writings of Maurice Merleau Ponty and Martin Heidegger Their insights into space and time bring the natural world to life in a manner well suited to the dynamic phenomena of contemporary physics In aligning continental thought with problems in physics and cosmology the book makes use of topology Phenomenological intuitions about space

and time are systematically fleshed out via an unconventional and innovative approach to this qualitative branch of mathematics. The author's pioneering work in topological phenomenology is applied to such topics as quantum gravity cosmogony symmetry spin vorticity dimension theory Kaluza Klein and string theories fermion boson interrelatedness hypernumbers and the mind matter interface.

Handbook of Dialogical Self Theory Hubert J. M. Hermans, Thorsten Gieser, 2011-11-24. In a boundary crossing and globalizing world the personal and social positions in self and identity become increasingly dense heterogeneous and even conflicting. In this handbook scholars of different disciplines nations and cultures East and West bring together their views and applications of dialogical self theory in such a way that deeper commonalities are brought to the surface As a bridging theory dialogical self theory reveals unexpected links between a broad variety of phenomena such as self and identity problems in education and psychotherapy multicultural identities child rearing practices adult development consumer behaviour the use of the internet and the value of silence Researchers and practitioners present different methods of investigation both qualitative and quantitative and also highlight applications of dialogical self theory

Self Creation Frank Summers, 2013-06-17 Insight and Change The problematic relationship between these two concepts to which the reality of psychoanalytic patients who fully understand maladaptive patterns without being able to change them attests has dogged psychoanalysis for a century Building on the integrative object relations model set forth in Transcending the Self 1999 Frank Summers turns to Winnicott's notion of potential space in order to elaborate a fresh clinical approach for transforming insight into new ways of being and relating For Summers understanding occurs within transference space but the latter must be translated into potential space if insight is to give rise to change in the world outside the consulting room Within potential space Summers holds the analyst s task shifts from understanding the present to aiding and abetting the patient in creating a new future This means that the analyst must draw on her hard won understanding of the patient to construct a vision of who the patient can become Lasting therapeutic change grows out of the analyst s and patient s collaboration in developing new possibilities of being that draw on the patient's affective predispositions and buried aspects of self In the second half of the book Summers applies this model of therapeutic action to common clinical syndromes revolving around depression narcissistic injuries somatic symptoms and internalized bad objects Here we find vivid documentation of specific clinical strategies in which the therapeutic use of potential space gives rise to new ways of being and relating which in turn anchor the creation of a new sense of self Reason, Truth and Self Michael Luntley, 2002-09-11 Michael Luntley provides a lively introduction to the debate over postmodernism Sympathisers of the postmodernist critique of absolute knowledge have jetisoned concepts of reason t ruth and self this abandonment has fuelled their opponents case against postmodernism This has led them to ignore the very real problems raised by the postmodernists Luntley offers a clear and careful exposition of how rational debate survives despite the Enlightenment's failings Reason Truth and Self covers many of the key questions of our age How rational is science Can we really know the truth about

ourselves and the world What is the nature of the mind Can we know the difference between right and wrong Reason Truth and Self is ideal for courses in philosophy and the social sciences Conceiving Nature after Aristotle, Kant, and Hegel Richard Dien Winfield, 2017-10-10 This book defies the reigning dismissal of the philosophy of nature by turning to what Aristotle Kant and Hegel have had to say about nature and critically thinking through their arguments to reconstruct a comprehensive account of the universe Aided by the contributions of more recent thinkers such as Albert Einstein Werner Heisenberg Michael B Foster and Hans Jonas Conceiving Nature shows how the mechanics of matter in motion the physics of electromagnetism and chemical process provide all that is needed for life to emerge and give rise to rational animals capable of knowing nature in truth The work contains detailed discussions of much of Aristotle's writing on nature of Kant's Metaphysical Foundations of Natural Science and of Hegel's Philosophy of Nature The Body and the Self Jose Luis Bermudez, Naomi Eilan, Anthony Marcel, 1998-01-23 The Body and the Self brings together recent work by philosophers and psychologists on the nature of self consciousness the nature of bodily awareness and the relation between the two The central problem addressed is How is our grasp of ourselves as one object among others underpinned by the ways in which we use and represent our bodies The contributors take up such issues as how should we characterize the various distinctive ways we have of being in touch with our own bodies in sensation proprioception and action How exactly does our grip on our bodies as objects connect with our ability to perceive the external environment and with our ability to engage in various forms of social interaction Can any of these ways of representing our bodies affect a bridge between body and self

Space, Time & Deity: The Gifford Lectures at Glasgow 1916-1918, **Space, Time, and Deity** Samuel Alexander, 1920 2 vols NA NA,2016-01-06 Emotion, Depth, and Flesh: A Study of Sensitive Space Sue L. Cataldi, Suzanne L. Cataldi, 1993-01-01 Philosophically explores the topic of emotional depth Dreaming and the Self Jeannette Marie Mageo, 2012-02-01 Drawing upon original fieldwork cultural theory and psychological research Dreaming and the Self offers new approaches to the self particularly to subjectivity identity and emotion Through an investigation of dreams in various cultures the contributors explore how people as subjects actually experience cultural life how they forge identities out of their cultural and historical experiences how the cultural and historical worlds in which they live shape even their bodily habits and responses and how the person as agent responds to and imaginatively recreates his or her culture These essays demonstrate that dreams reflect tellingly on topics of great currency in anthropology such as how people personally manage postcolonialism transnationalism and migration Actual dreams are examined including dreams of Samoan young people about race of a Haitian priestess about vodou deities of a Pakistani about spiritual teachers of psychoanalytic clients in Los Angeles and San Diego about cars witches and sex and of a young Balinese mother about a neglected dog Dream. Death, and the Self J. J. Valberg, 2018-06-26 Might this be a dream In this book distinguished philosopher I J Valberg approaches the familiar question about dream and reality by seeking to identify its subject matter what is it that would be the

dream if this were a dream It turns out to be a subject matter that contains the whole of the world space and time but which like consciousness for Sartre is nothing in itself This subject matter the personal horizon lies at the heart of the main topics the first person the self and the self in time explored at length in the book The personal horizon is Valberg contends the subject matter whose center each of us occupies and which for each of us ceases with death This ceasing to be presents itself solipsistically not just as the end of everything for me but as the end of everything absolutely Yet since it is the same for everyone this cannot be Death thus confronts us with an impossible fact something that cannot be but will be The puzzle about death is one of several extraphilosophical puzzles about the self that Valberg discusses puzzles that can trouble everyday consciousness without any contribution from philosophy Nor can philosophy resolve the puzzles Its task is to get to the bottom of them and in this respect to understand ourselves a task philosophy has always set itself Shaun Gallagher, 2013-10-22 A long history of inquiry about human nature and the self stretches from the ancient tradition of Socratic self knowledge in the context of ethical life to contemporary discussions of brain function in cognitive science It begins with a conflict among the ancients On one view which comes to be represented most clearly by Aristotle the issue is settled in terms of a composite and very complex human nature Who I am is closely tied to my embodied existence The other view found as early as the Pythagoreans and developed in the writings of Plato Augustine and Descartes held that genuine humanness is not the result of an integration of lower functions but a purification of those functions in favour of a liberating spirituality The animal elements are excluded from the human essence The modern debate on the problem of the self although owing much to the insights of Locke and Hume can still be situated within the context of the two schools of ancient thought and this has led many to despair over the lack of apparent progress in this problem Today of course we often tend to look to science rather than philosophy to develop our understanding of a wide range of fundamental issues To what extent is the problem of the self a scientific issue Can insights from the study of neuropsychology and cognitive development in infancy provide a new perspective Can the study of schizophrenia and dissociative identity disorders tell us anything about the nature of human self consciousness Many would answer yes to the above questions but then is it not also the case that the study of exceptional self actualised human experience is equally relevant And can the phenomenological tradition dedicated to the systematic study of human experience and contemporary analytic approaches in philosophy help us out of some of the impasses that have bedevilled the empiricist tradition MODELS OF THE SELF includes all these perspectives in an attempt to cast light on one of the most intractable problems in science and the humanities Self to Self J. David Velleman, 2006-01-26 This collection of essays by philosopher J David Velleman on personal identity autonomy and moral emotions is united by an overarching thesis that there is no single entity denoted by the self as well as themes from Kantian ethics and Velleman's work in the philosophy of action
Concept and Formalization of Constellatory Self-Unfolding Albrecht von Müller, Elias Zafiris, 2018-05-29 This volume offers a fundamentally different way of conceptualizing time and

reality Today we see time predominantly as the linear sequential order of events and reality accordingly as consisting of facts that can be ordered along sequential time But what if this conceptualization has us mistaking the exhausts for the real thing i e if we miss the best the actual taking place of reality as it occurs in a very differently structured primordial form of time the time space of the present In this new conceptual framework both the sequential aspect of time and the factual aspect of reality are emergent phenomena that come into being only after reality has actually taken place In the new view facts are just the traces that the actual taking place of reality leaves behind on the co emergent canvas of local spacetime Local spacetime itself emerges only as facts come into being and only facts can be adequately localized in it But how does reality then actually occur It is conceived as a constellatory self unfolding characterized by strong self referentiality and taking place in the primordial form of time the not yet sequentially structured time space of the present Time is seen here as an ontophainetic platform i e as the stage on which reality can first occur This view of time and thus also space seems to be very much in accordance with what we encounter in quantum physics before the so called collapse of the wave function In parallel classical and relativistic physics largely operate within the factual portrait of reality and the sequential aspect of time respectively Only singularities constitute an important exemption here the canvas of local spacetime that emerged together with factization melts down again In the novel framework quantum reduction and singularities can be seen and addressed as inverse transitions In quantum physical state reduction reality gains the chrono ontological format of facticity and the sequential aspect of time becomes applicable In singularities by contrast the inverse happens Reality loses its local spacetime formation and reverts back into its primordial pre local shape making in this way the use of causality relations Boolean logic and the dichotomization of subject and object obsolete For our understanding of the relation between quantum and relativistic physics this new view opens up fundamentally new perspectives Both are legitimate views of time and reality they just address very different chrono ontological portraits and thus should not lead us to erroneously subjugating one view under the other The task of the book is to provide a formal framework in which this radically different view of time and reality can be addressed properly The mathematical approach is based on the logical and topological features of the Borromean Rings It draws upon concepts and methods of algebraic and geometric topology especially the theory of sheaves and links group theory logic and information theory in relation to the standard constructions employed in quantum mechanics and general relativity shedding new light on the pestilential problems of their compatibility. The intended audience includes physicists mathematicians and philosophers with an interest in the conceptual and mathematical foundations of Viewpoint and the Fabric of Meaning Barbara Dancygier, Wei-lun Lu, Arie Verhagen, 2016-03-21 This modern physics volume explores the cross linguistic diversity and possibly inconsistency of the span of linguistic means that signal reported speech and thought The integration of broad linguistic viewpoint in conversation and narrative and cognitive theory of mind and understanding the inner life and thought of others strategies for handling mixed points of view will be considered

<u>Kant's Theory of the Self</u> Arthur Melnick,2008-12-21 Melnick explains the third status of the self by identifying it with intellectual action that does not arise in the progression of attending and so is not appearance but accompanies and unifies inner attending As so accompanying it progresses with that attending and is therefore temporal not a thing in itself
