**The Long Shadow** Karl Alexander, Doris Entwisle, Linda Olson, 2014-05-31 A volume in the American Sociological Association's Rose Series in Sociology West Baltimore stands out in the popular imagination as the quintessential inner city gritty run down and marred by drugs and gang violence Indeed with the collapse of manufacturing jobs in the 1970s the area experienced a rapid onset of poverty and high unemployment with few public resources available to alleviate economic distress But in stark contrast to the image of a perpetual urban underclass depicted in television by shows like *The Wire* sociologists Karl Alexander Doris Entwisle and Linda Olson present a more nuanced portrait of Baltimore's inner city residents that employs important new research on the significance of early life opportunities available to low income populations *The Long Shadow* focuses on children who grew up in west Baltimore neighborhoods and others like them throughout the city tracing how their early lives in the inner city have affected their long term well being Although research for this book was conducted in Baltimore that city's struggles with deindustrialization white flight and concentrated poverty were characteristic of most East Coast and Midwest manufacturing cities The experience of Baltimore's children who came of age during this era is mirrored in the experiences of urban children across the nation For 25 years the authors of *The Long Shadow* tracked the life progress of a group of almost 800 predominantly low income Baltimore school children through the Beginning School Study Youth Panel BSSYP The study monitored the children's transitions to young adulthood with special attention to how opportunities available to them as early as first grade shaped their socioeconomic status as adults The authors fine grained analysis confirms that the children who lived in more cohesive neighborhoods had stronger families and attended better schools tended to maintain a higher economic status later in life As young adults they held higher income jobs and had achieved more personal milestones such as marriage than their lower status counterparts Differences in race and gender further stratified life opportunities for the Baltimore children As one of the first studies to closely examine the outcomes of inner city whites in addition to African Americans data from the BSSYP shows that by adulthood white men of lower status family background despite attaining less education on average were more likely to be employed than any other group in part due to family connections and long standing racial biases in Baltimore's industrial economy Gender imbalances were also evident the women who were more likely to be working in low wage service and clerical jobs earned less than men African American women were doubly disadvantaged insofar as they were less likely to be in a stable relationship than white women and therefore less likely to benefit from a second income Combining original interviews with Baltimore families teachers and other community members with the empirical data gathered from the authors groundbreaking research *The Long Shadow* unravels the complex connections between socioeconomic origins and socioeconomic destinations to reveal a startling and much needed examination of who succeeds and why [Index of Patents Issued from the United States Patent and Trademark Office](#) ,1990 *Physics Envy* Peter Middleton, 2015-11-04 Includes bibliographical references pages 259 301

**Learning Over Time** Alan P. Maloney, Jere Confrey, Kenny H. Nguyen, 2014-06-01 The driving forces behind mathematics learning trajectories is the need to understand how children actually learn and make sense of mathematics how they progress from prior knowledge through intermediate understandings to the mathematics target understandings and how to use these insights to improve instruction and student learning In this book readers will come to understand what learning trajectories are the research and methodology that are necessary for developing them and gain insight into potential applications of learning trajectories A synthesis and research outcome in their own right learning trajectories provide detailed description of instructionally grounded development of mathematical concepts and reasoning from the perspective of student learning and overall building on decades of accumulated experience in mathematics education research However

their greater importance may lie in their potential as frameworks that contribute an unprecedented coherence across classroom instruction professional development standards and assessment by focusing squarely on conceptual understanding and reasoning instead of assessment driven procedural knowledge This potential was sufficiently compelling as an organizing framework to have been cited as a basis for the Common Core mathematics standards the new mathematics learning expectations that are now consistent across most of the United States Among the conference attendees were the writers of the Common Core State Standards for Mathematics at the beginning of the Standards drafting process This book is an outgrowth of a conference on learning trajectories hosted in 2009 at North Carolina State University which examined research on learning trajectories An overarching message of the chapters in this volume is that learning trajectories by focusing on how children s mathematical reasoning develops are coming into their own as a rigorous underpinning for both instruction and accountability Some of the learning scientists featured in this volume have played major roles learning trajectories evolution from small scale day to day conjectures by individual teachers to systematic research endeavors that teachers and scientists alike can use to interpret standards plan instruction and formatively assess student work The work in this volume will be of interest to mathematics educators teachers and professional development specialists **Advances in**
