

# LINEAR APPLICATIONS HANDBOOK

The purpose of this handbook is to provide a fully indexed and cross-referenced collection of linear integrated circuit applications using both monolithic and hybrid circuits from National Semiconductor.

Individual application notes are normally written to explain the operation and use of one particular device or to detail various methods of accomplishing a given function. The organization of this handbook takes advantage of this innate coherence by keeping each application note intact, arranging them in numerical order, and providing a detailed Subject Index.

Many of the application schematics call out the generic family, identified by either the military temperature range version or commercial temperature range version of the device. Generally, any device in the generic family will work in the circuit. For example, an amplifier indicated as an LM108 refers to the generic "108" family, and does not imply that only military-grade devices will work in the application. Military (or industrial) and prime electrical ("A") grade devices need only be considered when their tighter electrical limits or wider temperature range warrants their use.

The temperature range of linear devices is indicated by either the first digit in the part number, or a letter following the base part number.

Grade	Specified Temperature Range	Part Number
Military	$-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$	LM1XX or LM00XXM
Extended*	$-40^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$	LM000XE
Industrial*	$-25^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$	LM2XX or LM00XXI
Commercial	$0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$	LM3XX or LM00XXC

*\*Some industrial temperature range devices may be rated for the extended (also known as automotive) temperature range. Other extended temperature range devices may not include a temperature range designation in their part number. Check the device datasheet for the specified temperature range(s).*

Because commercial parts are less expensive than military or industrial, these points should be kept in mind when trying to determine the most cost-effective approach to a given design.
