Abstract

In recent years, there has been a trend towards a science and technology policy that is applied in nature. In times of growing public discontent about high taxation and budget deficits, even basic science needs to document industry relevance. Counting patents apparently related to basic research activities through citations would be one way of measuring the relevance of basic research to industry. This has become especially interesting since Narin et al. [Narin, F., Hamilton, K.S., Olivastro, D., 1995. Linkage between agency supported research and patented industrial technology. *Research Evaluation* 5 (3), 183–187.] observed an increasing linkage between US technology and public science. The results of Narin et al. indicate a growing relationship between science and technology in a very general way. This idea of an increasingly science-based technology might convey the impression that there is direct knowledge-transfer taking place that is reflected in citations to scientific research papers in patents. A study of front pages of patents in the field of nanoscale technologies suggests that citation linkages hardly represent a direct link between cited paper and citing patent. © 2000 Elsevier Science B.V. 1. Introduction

The study of references in patent documents — a form of linkage bibliometrics — has contributed to the debate about science and technology and how

they relate to each other. In this context, one has to mention the pioneering work of Narin et al. They can show an ever closer interaction between science and technology in high-technology areas (e.g., Narin and Noma, 1985). They also claim to have observed an increasing linkage between US technology and public science. Narin et al. (1995) show that the within-country connection between basic science and applied technology is especially pronounced in the highly scientific areas of technology. A more recent study by the same group underpins these findings (Narin et al., 1997). By tracing the rapidly growing citation linkage between US patents and scientific papers, Narin et al. reveal a strong national compo-
