Alibali, 2018-12-17 The book synergizes research on number across two disciplines mathematics education and psychology The underlying problem the book addresses is how the brain constructs number The

opening chapter frames the problem in terms of children's activity including mental and physical actions. Subsequent chapters are organized into sections that address specific domains of number: natural numbers, fractions, and integers. Chapters within each section address ways that children build upon biological primitives (e.g., subitizing) and prior constructs (e.g., counting sequences) to construct number. The book relies on co-authored chapters and commentaries at the end of each section to create dialogue between junior faculty and senior researchers as well as between psychologists and mathematics educators. The final chapter brings this work together around the framework of children's activity and additional themes that arise in the collective work. The book is aimed to appeal to mathematics educators, mathematics teacher educators, mathematics education researchers, educational psychologists, cognitive psychologists, and developmental psychologists.

Early Childhood Quality Rating Scale—Emergent Curriculum (ECQRS-EC) Kathy Sylva, Iram Siraj, Brenda Taggart, Denise Kingston, Young children's learning depends on a wide range of experiences that support their holistic development. While many different curricular frameworks are used around the world, there is increasing agreement that the emerging academic skills of language and literacy, mathematics, and science should be supported by a playful pedagogy in the early years. The Early Childhood Quality Rating Scale Emergent Curriculum (ECQRS-EC) is designed to measure quality in these key areas within preschool settings. In addition to three content area subscales, this evidence-based tool includes a subscale dedicated to diversity and inclusion to help educators support gender and cultural differences in children 3-6 years old who are developing at different rates. Because it recognizes the important role of the adult in providing children with high quality interactions, this new quality rating scale can be used for research, teacher self-evaluation, and program improvement, audit, and regulation. Research that has worldwide significance is rare, but the authors have strong credentials from decades of work on projects that have global relevance for early years research, policy, and practice. From the Foreword by W. Steven Barnett and Ellen C. Frede, co-directors, National Institute for Early Education Research, Rutgers. This indispensable tool guides policymakers, researchers, and early childhood educators in how to achieve high quality learning situations. Sonja Sheridan, University of Gothenburg, Sweden. The research-informed ECQRS-EC enables

a much needed objective assessment of pedagogy and learning environments an indispensable resource Nirmala Rao The University of Hong Kong The ECQRS EC is a gift for anyone dedicated to providing high quality early education and care Tara McLaughlin Massey University New Zealand

International Perspectives on Gender and Mathematics Education

Olof Steinhorsdottir, Helen J. Forgasz, Joanne Rossi Becker, Kyeonghwa Lee, 2010-06-01 Why a book on gender issues in mathematics in the 21st century Several factors have influenced the undertaking of this project by the editors First an international volume focusing on gender and mathematics has not appeared since publication of papers emerging from the 1996 International Congress on Mathematical Education Keitel 1998 Surely it was time for an updated look at this critical area of mathematics education Second we have had lively discussion and working groups on gender issues at conferences of the International Group for the Psychology of Mathematics Education PME for the past four years sessions at which stimulating and ground breaking research has been discussed by participants from many different countries Some publication seemed essential to share this new knowledge emerging from a wider variety of countries and from different cultural perspectives Third some western countries such as Australia and the USA have experienced in recent years a focus on the boy problem with an underlying assumption that issues of females and mathematics have been solved and are no longer worthy of interest Thus it seemed timely to look more closely at the issue of gender and mathematics internationally When the idea for this volume first emerged invitations were issued to those regularly attending the working and discussion groups at PME Potential authors were charged to focus on gender issues in mathematics and were given wide scope to hone in on the issues that were central to their own research

efforts or were in receipt or in need of close attention in their own national or regional contexts
