Numerical Treatment of Free Boundary Value Problems Julius Albrecht, 1982-06-01      *Numerical Treatment of Free Boundary Value Problems / Numerische Behandlung freier Randwertaufgaben*  
ALBRECHT, COLLATZ, HOFFMANN, 2013-11-22      **Numerical Treatment of Free Boundary Value Problems Workshop on Numerical Treatment of Free Boundary Value Problems, Oberwolfach**  
**Numerische Behandlung Freier Randwertaufgaben** K.-H. (Karl-Heinz) Hoffman, 1982      **Numerical Treatment of Free Boundary Value Problems / Numerische Behandlung Freier Randwertaufgaben** Julius Albrecht, COLLATZ, HOFFMANN, 1982      *Free Boundary Value Problems* HOFFMANN, SPREKELS, 2013-03-08 This monograph contains a collection of 16 papers that were presented at the conference Free Boundary Problems Numerical Treatment and Optimal Control held at the Mathematisches Forschungsinstitut Oberwolfach West Germany July 9-15 1989. It was the aim of the organizers of the meeting to bring together experts from different areas in the broad field of free boundary problems where a certain emphasis was given to the numerical treatment and optimal control of free boundary problems. However during the conference also a number of papers leading to important new theoretical insights were presented. The strong connection between theory and applications finds its reflection in this monograph which contains papers of high theoretical and numerical interest as well as applications to important practical problems. Many of the contributions are concerned with phase transition phenomena a field which was of particular importance during the meeting. Topics like spinodal decomposition, shape memory alloys, crystal growth and flow through porous media are addressed. Another field of major interest during the conference was fluid flow; also this field is addressed in this volume. The volume opens with a contribution by H. W. Alt and I. Pawlow. In their paper the problem of spinodal decomposition is treated in the non-isothermal situation. For the first time the existence of a weak solution to the corresponding system of evolution equations could be proved. The results of some numerical experiments are also reported. In the following paper M. Bornert and I.      **Numerical Treatment of Partial Differential Equations** Christian Grossmann, Hans-G. Roos, Martin Stynes, 2007-10-04 This book deals with discretization techniques for partial differential equations of elliptic, parabolic and hyperbolic type. It provides an introduction to the main principles of discretization and gives a presentation of the ideas and analysis of advanced numerical methods in the area. The book is mainly dedicated to finite element methods but it also discusses difference methods and finite volume techniques. Coverage offers analytical tools, properties of discretization techniques and hints to algorithmic aspects. It also guides readers to current developments in research.      Free Boundary Problems Involving Solids J. M. Chadam, Helen Rasmussen, 1993-02-22 This is the second of three volumes containing the proceedings of the International Colloquium Free Boundary Problems: Theory and Applications held in Montreal from June 13 to June 22 1990. The main theme of this volume is the concept of free boundary problems associated with solids. The first free boundary problem, the freezing of water, the Stefan problem, is the prototype of solidification.

problems which form the main part of this volume. The two sections treating this subject cover a large variety of topics and procedures ranging from a theoretical mathematical treatment of solvability to numerical procedures for practical problems. Some new and interesting problems in solid mechanics are discussed in the first section while in the last section the important new subject of solid solid phase transition is examined.

**A Variational Inequality Approach to free Boundary Problems with Applications in Mould Filling** Jörg Steinbach, 2012-12-06 Since the early 1960s the mathematical theory of variational inequalities has been under rapid development based on complex analysis and strongly influenced by real life application. Many but of course not all moving free Le a priori unknown boundary problems originating from engineering and economic applications can directly or after a transformation be formulated as variational inequalities. In this work we investigate an evolutionary variational inequality with a memory term which is as a fixed domain formulation the result of the application of such a transformation to a degenerate moving free boundary problem. This study includes mathematical modelling existence uniqueness and regularity results numerical analysis of finite element and finite volume approximations as well as numerical simulation results for applications in polymer processing. Essential parts of these research notes were developed during my work at the Chair of Applied Mathematics LAM of the Technical University Munich. I would like to express my sincerest gratitude to K. H. Hoffmann the head of this chair and the present scientific director of the Center of Advanced European Studies and Research caesar for his encouragement and support. With this work I am following a general concept of Applied Mathematics to which he directed my interest and which based on application problems comprises mathematical modelling mathematical and numerical analysis computational aspects and visualization of simulation results.

Borggaard,John Burns,Scott Schreck,2012-12-06 This volume contains the proceedings of the Second International Workshop on Optimal Design and Control held in Arlington Virginia 30 September 3 October 1997 The First Workshop was held in Blacksburg Virginia in 1994 The proceedings of that meeting also appeared in the Birkhauser series on Progress in Systems and Control Theory and may be obtained through Birkhauser These workshops were sponsored by the Air Force Office of Scientific Research through the Center for Optimal Design and Control CODAC at Virginia Tech The meetings provided a forum for the exchange of new ideas and were designed to bring together diverse viewpoints and to highlight new applications The primary goal of the workshops was to assess the current status of research and to analyze future directions in optimization based design and control The present volume contains the technical papers presented at the Second Workshop More than 65 participants from 6 countries attended the meeting and contributed to its success It has long been recognized that many modern optimal design problems are best viewed as variational and optimal control problems Indeed the famous problem of determining the body of revolution that produces a minimum drag nose shape in hypersonic flow was first proposed by Newton in 1686 Optimal control approaches to design can provide theoretical and computational insight into these problems This volume contains a number of papers which deal with computational aspects of optimal control **Improperly Posed Problems and Their Numerical Treatment** Prof. Dr. G. Hämmerlin,Prof. Dr. K.-H. Hoffmann,2013-11-21 Whilst improperly posed problems appear in several branches of applied and pure mathematics this conference concentrated mainly on the practical treatment of ill posedness

The participants came from 12 countries The interchange of ideas reflected the spectrum of questions arising in connection with the subject of the conference where currently progresses in research are made This volume contains 17 papers presented at the conference Focal points in the programme were Problems of regularisation parameter identification free boundary and inverse problems in differential equations and integral equations of the first kind Problems which appear in science in technical fields and in medicine are discussed as well as general operator equations In a joint discussion several open problems have been worked out which are collected at the end of the volume The editor's thanks go to all contributors and participants who made the conference a success to the management of the institute with its unique atmosphere to the Birkhauser Verlag for the possibility to publish the volume in the well known ISNM series to Dr P Jochum Mlin chen for assistance in organization and to Mrs Chr Rogg Augsburg for her excellent typing of several manuscripts

*Variational Approach to Hyperbolic Free Boundary Problems* Seiro Omata, Karel Svadlenka, Elliott Ginder, 2022-11-28 This volume is devoted to the study of hyperbolic free boundary problems possessing variational structure Such problems can be used to model among others oscillatory motion of a droplet on a surface or bouncing of an elastic body against a rigid obstacle In the case of the droplet for example the membrane surrounding the fluid in general forms a positive contact angle with the obstacle and therefore the second derivative is only a measure at the contact free boundary set We will show how to derive the mathematical problem for a few physical systems starting from the action functional discuss the mathematical theory and introduce methods for its numerical solution The mathematical theory and numerical methods depart from the classical approaches in that they are based on semi discretization in time which facilitates the application of the modern theory of calculus of variations
