the Academy Avoiding derailment Leadership strategies for identity reputation and legacy management **Nursing Informatics and the Foundation of Knowledge** Dee McGonigle, Kathleen Garver Mastrian, 2015 Explains how nursing informatics relates to knowledge acquisition knowledge processing knowledge generation and knowledge dissemination and feedback all of which build the science of nursing *The Nursing Informatics Implementation Guide* Eleanor Callahan Hunt, Sara Breckenridge Sproat, Rebecca Rutherford Kitzmiller, 2013-03-09 Health institutions are investing in and fielding information technology solutions at an unprecedented pace With the recommendations from the Institute of Medicine around information technology solutions for patient safety mandates from industry groups such as Leapfrog about using information systems to improve health care and the move toward evidence based practice health institutions cannot afford to retain manual practices The installation of multi million dollar computerized health systems represents the very life blood of contemporary clinical operations and a crucial link to the financial viability of institutions Yet the implementation of health information systems is exceptionally complex expensive and often just plain messy The need for improvement in the art and science of systems implementation is clear up to 70 80% of information technology installations fail The reasons are multifaceted ranging from the complexity of the diverse workflows being computerized the intricate nature of health organizations the knowledge and skills of users to other reasons such as strategies for obtaining key executive support weaving through the politics peculiar to the institution and technical facets including the usability of systems Thus the art and science of successfully implementing systems remains deeply layered in elusiveness Still given the pervasiveness of system implementations and the importance of the outcomes this is a critical topic especially for nurses and informatics nurse specialists

Ball, Judith V. Douglas, David

E. Garets, 2012-12-06 Changes in health care are at a breakneck pace. Regardless of the many changes we have collectively experienced, delivering health care has been and will continue to be an enormously information-intensive process. Whether caring for a patient or a population, whether managing a clinic or a continuum, we are in a knowledge exchange business. A major task for our industry and the task for chief information officers (CIOs) is to find and apply improved strategies and technologies for managing healthcare information. In a fiercely competitive healthcare marketplace, the pressures to succeed in this undertaking and the rewards associated with success are enormous. While the task is still daunting, we can all be encouraged by progress being made in information management. There are documented successes throughout health care, and there is growing recognition by healthcare chief executive officers and boards that information strategies and their deployment are essential to organizational efficiency, quite possibly organizational survival. Performance Improvement Through Information Management Marion J. Ball, Judith V. Douglas, 2012-12-06 Performance Improvement through Information Management highlights performance improvement and business strategies throughout various health care settings, focusing on business drivers and management mechanisms explaining when, how, and why information technology solutions are of value. Structured on three levels: Market Environment, Transformational Processes, and Enabling Technologies, the text describes the current state of the art of health care and the shape of things to come and provides practical solutions and strategies for implementing applications of technology within the current context of health care and its transformation. This text will be an invaluable reference to the chief executive officers, chief information officers, senior executives, and board members who are shaping health care today and into the 21st century. Likewise, it will appeal to healthcare administrators and managers, healthcare systems specialists, and students in advanced healthcare professional and academic programs.

Transforming Health Care Through Information Nancy M. Lorenzi, Robert T. Riley, Marion J. Ball, Judith V. Douglas, 2013-03-09 This series is intended for the rapidly increasing number of health care professionals who have rudimentary knowledge and experience in health care computing and are seeking opportunities to expand their horizons. It does not attempt to compete with the primers already on the market. Eminent international experts will edit, author, or contribute to each volume in order to provide comprehensive and current accounts of innovations and future trends in this quickly evolving field. Each book will be practical, easy to use, and well referenced. Our aim is for the series to encompass all of the health professions by focusing on specific professions such as nursing in individual volumes. However, integrated computing systems are only one tool for improving communication among members of the health care team. Therefore, it is our hope that the series will stimulate professionals to explore additional means of fostering interdisciplinary exchange. This series springs from a professional collaboration that has grown over the years into a highly valued personal friendship. Our joint values put people first. If the Computers in Health Care series lets us share those values by helping health care professionals to communicate their ideas for the benefit of patients, then our efforts will have succeeded. *Effective*
