Nutrient Use in Crop Production Zdenko Rengel, 2017-12-14 If you are an agronomist horticulturalist plant and soil scientist breeder or soil microbiologist you will want to read Nutrient Use in Crop Production to find everything you need to know about judicious nutrient management and maximizing nutrient utilization in the agricultural landscape In this book you will discover ways to minimize undesirable nutrient losses and techniques for preserving the environment while meeting the challenges of providing the earth's increasing population with sufficient food feed and fiber to sustain life Your existing knowledge base concerning this vital area of science will expand and grow as you become more open to the new ideas and applications contained in Nutrient Use in Crop Production Most importantly you will avoid the narrow scope found in most crop nutrition books and take a broader more globally minded view of how to maximize nutrient use and minimize nutrient losses in the soil of agricultural systems Specifically you will find these and other areas covered population growth food production and nutrient requirements managing soil fertility decline the role of nitrogen fixation in crop production delivering fertilizers through seed coatings micronutrient fertilizers the role of nutrient efficient crops in modern agriculture Feeding the world without depleting the world's viable soil nutrients is a monumental task but one that can be achieved as evidenced in the pages of Nutrient Use in Crop Production You and your circle of students professionals and administrators will benefit greatly from this in depth view of nutrient use in both developed and non industrialized countries to give you a better sense of how to allow both the world and the world's crops to grow **The Use of Nutrients in Crop Plants** Nand Kumar

Fageria, 2016-04-19 Put Theory into Practice Scarcity of natural resources higher costs higher demand and concerns about environmental pollution under these circumstances improving food supply worldwide with adequate quantity and quality is fundamental Based on the author's more than forty years of experience The Use of Nutrients in Crop Plants Nutrient Use in Crop Production Zdenko Rengel, 2017-12-14 If you are an agronomist horticulturalist plant and soil scientist breeder or soil microbiologist you will want to read Nutrient Use in Crop Production to find everything you need to know about judicious nutrient management and maximizing nutrient utilization in the agricultural landscape In this book you will discover ways to minimize undesirable nutrient losses and techniques for preserving the environment while meeting the challenges of providing the earth's increasing population with sufficient food feed and fiber to sustain life Your existing knowledge base concerning this vital area of science will expand and grow as you become more open to the new ideas and applications contained in Nutrient Use in Crop Production Most importantly you will avoid the narrow scope found in most crop nutrition books and take a broader more globally minded view of how to maximize nutrient use and minimize nutrient losses in the soil of agricultural systems Specifically you will find these and other areas covered population growth food production and nutrient requirements managing soil fertility decline the role of nitrogen fixation in crop production delivering fertilizers through seed coatings micronutrient fertilizers the role of nutrient efficient crops in modern agriculture Feeding the world without

depleting the world's viable soil nutrients is a monumental task but one that can be achieved as evidenced in the pages of *Nutrient Use in Crop Production*. You and your circle of students, professionals and administrators will benefit greatly from this in-depth view of nutrient use in both developed and non-industrialized countries to give you a better sense of how to allow both the world and the world's crops to grow. *Nutrient Use Efficiency in Plants* Malcolm J. Hawkesford, Stanislav Kopriva, Luit J. De Kok, 2014-11-14 *Nutrient Use Efficiency in Plants: Concepts and Approaches* is the ninth volume in the Plant Ecophysiology series. It presents a broad overview of topics related to improvement of nutrient use efficiency of crops. Nutrient use efficiency (NUE) is a measure of how well plants use the available mineral nutrients. It can be defined as yield/biomass per unit input/fertilizer/nutrient content. NUE is a complex trait; it depends on the ability to take up the nutrients from the soil but also on transport, storage, mobilization, usage within the plant and even on the environment. NUE is of particular interest as a major target for crop improvement. Improvement of NUE is an essential prerequisite for expansion of crop production into marginal lands with low nutrient availability but also a way to reduce use of inorganic fertilizer.

Improving Water and Nutrient-Use Efficiency in Food Production Systems Zed Rengel, 2013-04-01 *Improving Water and Nutrient Use Efficiency in Food Production Systems* provides professionals, students and policy makers with an in-depth view of various aspects of water and nutrient use in crop production. The book covers topics related to global economic, political and social issues related to food production and distribution, describes various strategies and mechanisms that increase water and nutrient use efficiency and reviews the current situation and potential improvements in major food-producing systems on each continent. The book also deals with problems experienced by developed countries separately from problems facing developing countries. *Improving Water and Nutrient Use Efficiency* emphasizes judicious water and nutrient management which is aimed at maximising water and nutrient utilisation in the agricultural landscape and minimising undesirable nutrient losses to the environment. *Nitrogen Management in Crop Production* Nand Kumar Fageria, 2014-06-25 One of the main approaches for safeguarding food security/sustainable development has increased demand for knowledge on fertilizer management in crop production. Among essential plant nutrients, nitrogen is one of the most important yield-limiting nutrients, mainly responsible for determining yield and yield components in cereals and legumes. It is *Phosphorus Management in Crop Production* Nand Kumar Fageria, Zhenli He, Virupax C. Baligar, 2017-02-17 The world population is projected to reach nine billion by 2050 and in the coming years global food demand is expected to increase by 50% or more. Higher crop productivity gains in the future will have to be achieved in developing countries through better natural resources management and crop improvement. After nitrogen, phosphorus (P) has more widespread influence on both natural and agricultural ecosystems than any other essential plant element. It has been estimated that 5-7 billion hectares of land worldwide contain insufficient amounts of available P for sustainable crop production and P deficiency in crop plants is a widespread problem in various parts of the world. However, it has been estimated that worldwide

minable P could last less than 40 years For sustaining future food supplies it is vital to enhance plant P use efficiency To bring the latest knowledge and research advances in efficient management of P for economically viable and environmentally beneficial crop production in sustainable agriculture Phosphorus Management in Crop Production contains chapters covering functions and diagnostic techniques for P requirements in crop plants P use efficiency and interactions with other nutrients in crop plants management of P for optimal crop production and environmental quality and basic principles and methodology regarding P nutrition in crop plants The majority of research data included are derived from many years of field greenhouse and lab work hence the information is practical in nature and will have a significant impact on efficient management of P fertilizers to enhance P use efficiency improve crop production promote sustainable agriculture and reduce P losses through eluviations leaching and erosion to minimize environmental degradation A comprehensive book that combines practical and applied information Phosphorus Management in Crop Production is an excellent reference for students professors agricultural research scientists food scientists agricultural extension specialists private consultants fertilizer companies and government agencies that deal with agricultural and environmental issues The Role of Plant Roots in Crop Production Nand Kumar Fageria, 2012-07-23 The Role of Plant Roots in Crop Production presents the state of knowledge on environmental factors in root growth and development and their effect on the improvement of the yield of annual crops This book addresses the role of roots in crop production and includes references to numerous annual crops In addition it brings together the issues and the state of the art technologies that affect root growth with comprehensive reviews to facilitate efficient sustainable economical and environmentally responsible crop production Written for plant scientists crop scientists horticulturalists and soil scientists plant physiologists breeders environmental scientists agronomists and undergraduate and graduate students in different disciplines of agricultural science The Role of Plant Roots in Crop Production Addresses root architecture and development dynamics to help users improve crop productivity Emphasizes crop production plant nutrition and soil chemistry relative to root growth and functions Covers root morphology root functions nutrient and water uptake by roots root soil interactions root environment interactions root microbe interactions physiology of root crops and management practices to improve root growth Supports content with experimental results and additional data is presented with pictures Increasing food production worldwide has become a major issue in the 21st century Stagnation in grain yield of important food crops in recent years in developed as well as developing countries has contributed to a sharp increase in food prices Furthermore higher grain yield will be needed in the future to feed a burgeoning world population with a rising standard of living that requires more grain per capita Technologies that enhance productivity ensure environmental safety and conserve natural resources are required to meet this challenge Achieving sustainable crop nutrition Prof Zed Rengel, 2020-02-18 Focus on integrating research on nutrient cycling crop nutrient processing and the environmental impact of fertiliser use to identify ways of improving nutrient use efficiency NUE in the use of particular fertilisers Includes research on a range of

secondary macronutrients and micronutrients including calcium magnesium zinc boron manganese and molybdenum

Reviews a wide range of options for reducing optimising current levels of fertiliser use **Sustainable Crop Production**
